About the Authors

Aurélien Baillon (“Eliciting Subjective Probabilities Through Exchangeable Events: An Advantage and a Limitation”) received his Ph.D. in economics from Ecole Nationale Supérieure d’Arts et Métiers, Paris, France. He is currently an assistant professor in the Department of Applied Economics—Health Economics at Erasmus University in Rotterdam. His

work focuses on individual decision making under uncertainty and on medical decision making. Through both empirical and theoretical studies, his research addresses issues in subjective probability elicitation, models of attitude towards ambiguity, and aggregation of expert opinions. **Address:** Department of Applied Economics, Erasmus School of Economics, Erasmus University Rotterdam, P.O. Box 1738, 3000 DR Rotterdam, The Netherlands; email: baillon@few.eur.nl.

Izack Cohen (“Improving Time Critical Decision-Making in Life-Threatening Situations: Observations and Insights”) manages a multidisciplinary technological organization. He also serves as an adjunct lecturer in the Industrial Engineering and Management Faculty at Technion, the Israel Institute of Technology. Izack received his B.Sc. in chemical engineering,

his M.Sc. in materials engineering, and his Ph.D. in industrial engineering and management. His research interests are broad and include material engineering, project management, the theory and application of decision making, development of advanced maintenance methods, optimization methods, and strategic management. **Address:** The Technion-Israel Institute of Technology, Massada St., no. 17, Kiryat Motzkin 26352, Israel; email: izik.cohen@yahoo.com.

Niklas Vareman (“Norms and Descriptions”) is a Ph.D. student in theoretical philosophy at Lund University, Sweden. He works on a project on risks financed by the Swedish Research Council. His research interests include decision theory and epistemology, wherein he studies decision theories dealing with indeterminate probabilities.

Address: Department of Theoretical Philosophy, Lund University, Kungshuset, Lundagård, S-222 22 Lund, Sweden; email: niklas.vareman@fil.lu.se.

Mort Webster (“Incorporating Path Dependency into Decision-Analytic Methods: An Application to Global Climate-Change Policy”) has been a visiting professor at Massachusetts Institute of Technology (MIT) since August 2006 in the Joint Program on the Science and Policy of Global Change and in the Department of Earth, Atmosphere and Planetary Sciences. From 2001–2006, he was an assistant professor of public

policy in the Department of Public Policy at the University of North Carolina at Chapel Hill. His research is focused on the role of uncertainty (scientific or otherwise) in policy decisions and in the design of effective environmental policy. At the broadest level, he is interested in exploring the interface between formal quantitative models and the policy process. His research is on how to analyze the uncertainty in assessment models of global climate change to produce insights that are useful to the policy community, including addressing the role of learning in the future on today’s decisions, the effect of uncertainty on multi-stakeholder negotiations, and better means of communicating results to nonexperts. He received a Ph.D. (2000) in technology, management and policy from MIT and a B.S.E. (1988) in computer science and engineering from the University of Pennsylvania. **Address:** Massachusetts Institute of Technology, Earth, Atmosphere and Planetary Sciences Department, MIT Joint Program on the Science and Policy of Global Change, E40-408, 77 Massachusetts Avenue, Cambridge, MA 02139; email: mort@mit.edu.
