With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

About the Authors

Debarun Bhattacharjya (“Formulating Asymmetric Decision Problems as Decision Circuits” and “From Reliability Block Diagrams to Fault Tree Circuits”) is a research staff member in the Risk Analytics team within the broader Business Analytics and Math Sciences division at IBM T.J. Watson Research Center. He received his Ph.D. in management science and engineering at Stanford University. His primary research interests lie in decision and risk analysis, and probabilistic models and decision theory in artificial intelligence. Specifically, he has pursued research in probabilistic graphical models (influence diagrams and Bayesian networks), value of information, sensitivity analysis, and utility theory. His applied work has been in domains such as sales, energy, business services, and public policy. He has coauthored more than 10 publications in highly refereed journals and conference proceedings, as well as two patents. He was nominated by IBM management for the Young Researcher Connection at the Institute for Operations Research and the Management Sciences (INFORMS) Practice Conference in 2010. **Email:** debarunb@us.ibm.com.

May Cheung (“Regulation Games Between Government and Competing Companies: Oil Spills and Other Disasters”) is an undergraduate senior in the Department of Industrial and Systems Engineering at the University at Buffalo. Her research interests are in decision analysis, optimization, and simulation with respect to complex, high-impact decisions. **Email:** mgcheung@buffalo.edu.

Léa A. Deleris (“From Reliability Block Diagrams to Fault Tree Circuits”) is a research staff member and manager at IBM Dublin Research Laboratory, where she oversees the Risk Collaboratory, a three-year research project funded in part by the Irish Industrial Development Agency around risk management, from stochastic optimization to the communication of risk information to decision makers. Prior to joining the Dublin lab, she was a research staff member with the Risk Analytics Group, Business Application and Mathematical Science Department, IBM T.J. Watson Research Center, Yorktown Heights, New York. Her primary interests have been in the fields of decision theory and risk analysis. Her work is currently focused on leveraging natural language processing techniques to facilitate the construction of risk models, distributed elicitation of expert opinions, and value of information problems. She holds a Ph.D. in management science and engineering from Stanford University. **Email:** lea.deleris@ie.ibm.com.

Philippe Delquié (“Risk Measures from Risk-Reducing Experiments”) is an associate professor of decision sciences at the George Washington University, and holds a Ph.D. from Massachusetts Institute of Technology. Professor Delquié’s teaching and research are in decision, risk, and multicriteria analysis. His research is at the nexus of behavioral and normative theories of decision, addressing issues in preference elicitation, value of information, nonexpected utility models of choice, and risk measures. Prior to joining the George Washington University, he held academic appointments at INSEAD, the University of Texas at Austin, and École Normale Supérieure, France, and visiting appointments at Duke University’s Fuqua School of Business. He is on the editorial board of *Decision Analysis* and has completed a term as an associate editor. **Email:** delquie@gwu.edu.

Lorraine Dodd (“Regulating Autonomous Agents Facing Conflicting Objectives: A Command and Control Example”) is a highly respected international contributor to command and leadership studies within military and UK governmental command, control, intelligence and information analysis, and research. She has an honours degree in pure mathematics and an M.Sc. in operational research and management science from the University of Warwick majoring in catastrophe theory and nonlinearity. Her main interest is in sense-making, decision making, and risk taking under conditions of uncertainty, confusion, volatility, ambiguity, and contention, as applied to the study of institutions, organizations, society, people, and governance. She uses analogy with brain functions and coherent cellular functions to develop mathematical models of complex decision behavior. Her most recent studies include an application of a multiagency, multiperspective approaches to collaborative decision making and planning, and development of an “open-eyes/open-mind” framework to provide support to leaders when dealing with complex crises and “black swans.” She has developed an understanding of the nonlinear, slow and fast dynamics of behavior, in particular, of means of organizing for agility in complex and uncertain environments. **Email:** l.dodd@cranfield.ac.uk.

Rachele Foschi (“Interactions Between Ageing and Risk Properties in the Analysis of Burn-in Problems”) has an M.Sc. and a Ph.D. in mathematics from the University of Rome La Sapienza, where she also worked as a tutor for the courses of calculus and probability. Currently, she is an assistant professor in the Economics and Institutional Change Research Area at IMT (Institutions, Markets, Technologies) Advanced Studies, in Lucca, Italy. Her research interests include stochastic dependence, reliability, stochastic orders, point processes, and mathematical models in economics. Random sets and graphs, linguistics, and behavioral models are of broader interest to her. **Email:** rachele.foschi@imtlucca.it.

Simon French (“Expert Judgment, Meta-analysis, and Participatory Risk Analysis”) recently joined the Department of Statistics at the University of Warwick to become the director of the Risk Initiative and Statistical Consultancy Unit. Prior to joining the University of Warwick, he was a professor of information and decision sciences at Manchester Business School. Simon’s research career began in Bayesian statistics, and he was one of the first to apply hierarchical modeling, particularly in the domain of protein crystallography. Nowadays he is better known for his work on decision making, which began with his early work on decision theory. Over the years, his work has generally become more applied: looking at ways of supporting real decision makers facing major strategic and risk issues. In collaboration with psychologists, he has sought to support real decision makers and stakeholders in complex decisions in ways that are mindful of their human characteristics. He has

a particular interest in societal decision making, particularly with respect to major risks. He has worked on public risk communication and engagement and the wider areas of stakeholder involvement and deliberative democracy. Simon has worked across the public and private sectors, often in contexts that relate to the environment, energy, food safety, and the nuclear industry. In all of his work, the emphasis is on multidisciplinary and participatory approaches to solving real problems. **Email:** simon.french@warwick.ac.uk.

L. Robin Keller (“From the Editors: Games and Decisions in Reliability and Risk”) is a professor of operations and decision technologies in the Merage School of Business at the University of California, Irvine. She received her Ph.D. and M.B.A. in management science and her B.A. in mathematics from the University of California, Los Angeles. She has served as a program director for the Decision, Risk, and Management Science Program of the U.S. National Science Foundation (NSF). Her research is on decision analysis and risk analysis for business and policy decisions and has been funded by NSF and the U.S. Environmental Protection Agency. Her research interests cover multiple attribute decision making, riskiness, fairness, probability judgments, ambiguity of probabilities or outcomes, risk analysis (for terrorism, environmental, health, and safety risks), time preferences, problem structuring, cross-cultural decisions, and medical decision making. She

is currently the editor-in-chief of *Decision Analysis*, published by the Institute for Operations Research and the Management Sciences (INFORMS). She is a fellow of INFORMS and has held numerous roles in INFORMS, including board member and chair of the INFORMS Decision Analysis Society. She is a recipient of the George F. Kimball Medal from INFORMS. She has served as the decision analyst on three National Academy of Sciences committees. **Email:** lrkeller@uci.edu.

Miguel A. Lejeune (“Game Theoretical Approach for Reliable Enhanced Indexation”) is an assistant professor of decision sciences at the George Washington University (GWU) and holds a Ph.D. degree from Rutgers University. Prior to joining GWU, he was a visiting assistant professor in operations research at Carnegie Mellon University. His areas of expertise/research interests include stochastic programming, financial risk, and large-scale optimization. He is the recipient of a Young Investigator/CAREER Research Grant (2009) from the Army Research Office. He also received the IBM Smarter Planet Faculty Innovation Award (December 2011) and the Royal Belgian Sciences Academy Award for his master’s thesis. **Email:** mlejeune@gwu.edu.

Jason R. W. Merrick (“From the Editors: Games and Decisions in Reliability and Risk”) is a professor in the Department of Statistical Sciences and Operations Research at Virginia Commonwealth University. He has a D.Sc. in operations research from the George Washington University. He teaches courses in decision analysis, risk analysis, and simulation. His research is primarily in the area of decision analysis and Bayesian statistics. He has worked on projects ranging from assessing maritime oil transportation and ferry system safety, the environmental health of watersheds, and optimal replacement policies for rail tracks and machine tools, and he has received grants from the National Science Foundation, the Federal Aviation Administration, the United States Coast Guard, the American Bureau of Shipping, British Petroleum, and Booz Allen Hamilton, among others. He has

also performed training for Infineon Technologies, Wyeth Pharmaceuticals, and Capital One Services. He is an associate editor for *Decision Analysis* and *Operations Research*. He is the information officer for the Decision Analysis Society of INFORMS. **Email:** jrmerrick@vcu.edu.

Gilberto Montibeller (“Modeling State-Dependent Priorities of Malicious Agents”) is a tenured lecturer in decision sciences in the Department of Management at the London School of Economics (LSE). With a first degree in electrical engineering (Universidade Federal de Santa Catarina (UFSC), Brazil, 1993), he started his career as an executive at British and American Tobacco. Moving back to academia, he was awarded a master’s degree (UFSC, 1996) and a Ph.D. in production engineering (UFSC/University of Strathclyde, United Kingdom, 2000). He then continued his studies as a postdoctoral research fellow in management science at the University of Strathclyde (2002–2003). He is an area editor of the *Journal of Multi-Criteria Decision Analysis*, and he is on the editorial board of *Decision Analysis* and the *EURO Journal on Decision Processes*. His main research interest is on supporting strategic-level decision making, both in terms of decision analytic methodologies and of decision processes. He has been funded by the AXA Research Fund, United Kingdom’s EPSRC (Engineering and Physical Sciences Research Council), and Brazil’s CAPES (Coordenação de Aperfeiçoamento de Pessoal de Nível Superior). His research has been published in journals such as the *European Journal of Operational Research*, *Decision Support Systems*, and *OMEGA—The International Journal of Management Science*. One of his papers, on the evaluation of strategic options and scenario planning, was awarded the Wiley Prize in Applied Decision Analysis by the International Society of Multi-Criteria Decision Making. He has had visiting positions at the International Institute for Applied Systems Analysis (IIASA, Austria) and the University of Warwick (United Kingdom), and is a visiting associate professor of production engineering at the University of São Paulo (Brazil). He also has extensive experience in applying decision analysis in practice; over the past 17 years he has provided consulting to both private and public organizations in Europe and South America. He is a regular speaker at the LSE Executive Education courses. **Email:** g.montibeller@lse.ac.uk.

M. Elisabeth Paté-Cornell (“Games, Risks, and Analytics: Several Illustrative Cases Involving National Security and Management Situations”) specializes in engineering risk analysis with application to complex systems (space, medical, etc.). Her research has focused on explicit inclusion of human and organizational factors in the analysis of systems’ failure risks. Her recent work is on the use of game theory in risk analysis with applications that have included counterterrorism and nuclear counterproliferation problems. She is a member of the National Academy of Engineering, the French Académie des Technologies, and of several boards, including Aerospace, Draper Laboratory, and In-Q-Tel. Dr. Paté-Cornell was a member of the President’s Foreign Intelligence Advisory Board from December 2001 to 2008. She holds an engineering degree (applied mathematics and computer science) from the Institut Polytechnique de Grenoble (France), an M.S. in operations research and a Ph.D. in engineering-economic systems, both from Stanford University. **Email:** mep@stanford.edu.

Jesus Rios (“Adversarial Risk Analysis: The Somali Pirates Case”) is a research staff member at the IBM T.J. Watson Research Center. He has a Ph.D. in computer sciences and mathematical modeling from the University Rey Juan Carlos. Before joining IBM, he worked in several universities as a researcher, including the University of Manchester, the University of Luxembourg, Aalborg University, and Concordia University. He participated in the 2007 SAMSI program on Risk Analysis, Extreme Events, and Decision Theory, and led work in the area of adversarial risk analysis. He has also worked as a consultant for clients in the transportation, distribution, energy, defense, and telecommunication sectors. His main research interests are in the areas of risk and decision analysis and its applications. **Email:** jrriosal@us.ibm.com.

David Rios Insua (“Adversarial Risk Analysis: The Somali Pirates Case”) is a professor of statistics and operations research at Rey Juan Carlos University and a member of the Spanish Royal Academy of Sciences. He has written 15 monographs and more than 90 refereed papers in his areas of interest, which include decision analysis, negotiation analysis, risk analysis, and Bayesian statistics, and their applications. He is scientific advisor of AISoy Robotics. He is on the editorial board of *Decision Analysis*. **Email:** david.rios@urjc.es.

Fabrizio Ruggeri (“From the Editors: Games and Decisions in Reliability and Risk”) is the director of research at IMATI CNR (Institute of Applied Mathematics and Information Technology at the Italian National Research Council) in Milano, Italy. He received a B.Sc. in mathematics from the University of Milano, an M.Sc. in statistics from Carnegie Mellon University, and a Ph.D. in statistics from Duke University. After a start as a researcher at Alfa Romeo and then a computer consultant, he has been working at CNR since 1987. His interests are mostly in Bayesian and industrial statistics, especially in robustness, decision analysis, reliability, and stochastic processes; recently, he got involved in biostatistics and biology as well. Dr. Ruggeri is an adjunct faculty member at the Polytechnic Institute (New York University), a faculty member in the Ph.D. program in mathematics and statistics at the University of Pavia, a foreign faculty member in the Ph.D. program in statistics at the University of Valparaiso, and a member of the advisory board of the Ph.D. program in mathematical engineering at Polytechnic of Milano. An ASA Fellow and an ISI elected member, Dr. Ruggeri is the current ISBA (International Society for Bayesian Analysis) president and former ENBIS (European Network for Business and Industrial Statistics) president. He is the editor-in-chief of *Applied Stochastic Models in Business and Industry* and the *Encyclopedia of Statistics in Quality and Reliability*, and he is also the Chair of the Bayesian Inference in Stochastic Processes workshops and codirector of the Applied Bayesian Statistics summer school. **Email:** fabrizio@mi.imati.cnr.it.

Juan Carlos Sevillano (“Adversarial Risk Analysis: The Somali Pirates Case”) is a part-time lecturer at the Department of Statistics and Operations Research II (Decision Methods) at the School of Economics of Complutense University. He holds a B.Sc. in mathematics from Complutense University and an M.Sc. in decision systems engineering from Rey Juan Carlos University. **Email:** sevimjc@ccee.ucm.es.

Ross D. Shachter (“Formulating Asymmetric Decision Problems as Decision Circuits”) is an associate professor in the Department of Management Science and Engineering at Stanford University, where his teaching includes probability, decision analysis, and influence diagrams. He has been at Stanford since earning his Ph.D. in operations research from the University of California, Berkeley in 1982, except for two years visiting the Duke University Center for Health Policy Research and Education. His main research focus has been on the communication and analysis of the relationships among uncertain quantities in the graphical representations called Bayesian belief networks and influence diagrams, and in the 1980s he developed the DAVID influence diagram processing system for the Macintosh. His research in medical decision analysis has included the analysis of vaccination strategies and cancer screening and follow-up. At Duke he helped to develop an influence diagram-based approach for medical technology assessment. He has served on the Decision Analysis Society (DAS) of INFORMS Council, chaired its student paper competition, organized the DAS cluster in Nashville, and was honored with its Best Publication Award. For INFORMS, he organized the 1992 Doctoral Colloquium and has been an associate editor in decision analysis for *Management Science* and *Operations Research*. He has also served as Program Chair and General Chair for the Uncertainty in Artificial Intelligence Conference. At Stanford he served from 1990 until 2011 as a resident fellow in an undergraduate dormitory, and he was active in planning the university’s new student orientation activities and alcohol policy. **Email:** shachter@stanford.edu.

Jim Q. Smith (“Regulating Autonomous Agents Facing Conflicting Objectives: A Command and Control Example”) has been a full professor of statistics at the University of Warwick in the United Kingdom for 18 years, receiving a Ph.D. from Warwick University in 1977, and has more than 100 refereed publications in the area of Bayesian decision theory and related fields. He has particular interests in customizing probabilistic models in dynamic, high-dimensional problems to the practical needs of a decision maker, often using novel graphical approaches. As well as teaching decision analysis to more than 3,000 top math students in the United Kingdom and supervising 23 Ph.D. students in his areas of expertise, he has been chairman of the Risk Initiative and Statistical Consultancy Unit at Warwick for 10 years, engaging vigorously in the university’s interaction with industry and commerce. His book *Bayesian Decision Analysis: Principles and Practice* was published by Cambridge University Press in 2010. **Email:** j.q.smith@warwick.ac.uk.

Refik Soyer (“From the Editors: Games and Decisions in Reliability and Risk”) is a professor of decision sciences and of statistics and the chair of the Department of Decision Sciences at the George Washington University (GWU). He also serves as the director of the Institute for Integrating Statistics in Decision Sciences at GWU. He received his D.Sc. in University of Sussex, England, and B.A. in Economics from Boğaziçi University, Turkey. His areas of interest are Bayesian statistics and decision analysis, stochastic modeling, statistical aspects of reliability analysis, and time-series analysis. He has published more than 90 articles. His work has appeared in journals such as *Journal of the American Statistical Association*; *Journal of the Royal Statistical Society, Ser. B.*; *Technometrics*; *Biometrics*; *Journal of Econometrics*; *Statistical Science*; *International Statistical Review*; and *Management Science*. He has also coedited a volume titled *Mathematical Reliability: An Expository Perspective*. Soyer is an elected member of the International Statistical Institute, a fellow of the Turkish Statistical Association, and a fellow of the American Statistical Association. He was vice president of the International Association for Statistical Computing. He served on the editorial board of the *Journal of the American Statistical Association* and is currently an associate editor of the *Applied Stochastic Models in Business and Industry*. **Email:** soyer@gwu.edu.

Fabio Spizzichino (“Interactions Between Ageing and Risk Properties in the Analysis of Burn-in Problems”) is a full professor of probability theory at the Department of Mathematics, the Sapienza University of Rome. He teaches courses on introductory probability, advanced probability, and stochastic processes. In the past, he has also taught courses on basic mathematical statistics, Bayesian statistics, decision theory, and reliability theory. His primary research interests are related to probability theory and its applications. A partial list of scientific activities includes dependence models, stochastic ageing for lifetimes, and (semi-)copulas; first-passage times and optimal stopping times for Markov chains and discrete state-space processes; order statistics property for counting processes in continuous or discrete time, in one or more dimensions; sufficiency concepts in Bayesian statistics and stochastic filtering; and reliability of coherent systems and networks. He also has a strong interest in the connections among the above-mentioned topics and in their applications in different fields. At the present time, he is particularly interested in the relations among dependence, ageing, and utility functions. **Email:** fabio.spizzichino@uniroma1.it.

Sumitra Sri Bhashyam (“Modeling State-Dependent Priorities of Malicious Agents”) is a Ph.D. candidate in the Management Science Group at the London School of Economics (LSE). Her Ph.D. thesis is supervised by Dr. Gilberto Montibeller and cosupervised by Dr. David Lane. Her research interests include decision analysis, multicriteria decision analysis, preference modeling, and preference change. Before coming to study in the United Kingdom, Sri Bhashyam studied mathematics, physics, and computer sciences in France for two years, after which she moved to the United Kingdom to complete a B.A.Hons in marketing communications and then an M.Sc. in operational research from the LSE. She worked as a project manager at Xerox and, subsequently, as a consultant for an SME (small and medium enterprise) to help them set up their quality management system. Alongside the Ph.D., and participating in other research and consultancy projects, she has been a graduate teaching assistant for undergraduate, master, and executive students at the LSE. The courses she teaches include topics such as normative and descriptive decision theory, prescriptive decision analysis, simulation modeling and analysis. **Email:** s.sribhashyam@lse.ac.uk.

Jun Zhuang (“Regulation Games Between Government and Competing Companies: Oil Spills and Other Disasters”) has been an assistant professor of industrial and systems engineering at the University at Buffalo, the State University of New York (SUNY-Buffalo), since he obtained his Ph.D. in industrial engineering in 2008 from the University of Wisconsin–Madison. Dr. Zhuang’s long-term research goal is to integrate operations research and game theory to better mitigate, prepare for, respond to, and recover from both natural and man-made hazards. Other areas of interest include health-care, sports, transportation, supply chain management, and sustainability. Dr. Zhuang’s research has been supported by the U.S. National Science Foundation (NSF), by the U.S. Department of Homeland Security (DHS) through the Center for Risk and Economic Analysis of Terrorism Events (CREATE) and National Consortium for the Study of Terrorism and Responses to Terrorism (START), by the U.S. Department of Energy (DOE) through the Oak Ridge National Laboratory (ORNL), and by the U.S. Air Force Office of Scientific Research (AFOSR) through the Air Force Research Laboratory (AFRL). Dr. Zhuang is a fellow of the 2011 U.S. Air Force Summer Faculty Fellowship Program (AF SFFP), sponsored by the AFOSR. Dr. Zhuang is also a fellow of the 2009–2010 Next Generation of Hazards and Disasters Researchers Program, sponsored by the NSF. Dr. Zhuang is on the editorial board of *Decision Analysis* and is the coeditor of *Decision Analysis Today*. **Email:** jzhuang@buffalo.edu.
