With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

Contributing Authors

Miguel F. Anjos (“OR Approaches for Building Demand Response in a Smart Grid”) is a full professor of mathematics and industrial engineering at Polytechnique Montréal, where he holds the NSERC-Hydro-Quebec-Schneider Electric Senior Industrial Research Chair on Optimization for the Smart Grid, and the Inria International Chair on Power Peak Minimization for the Smart Grid. His research interests are in mathematical optimization and particularly its application in power systems and smart grids. His accolades include a Canada Research Chair, the Méritas Teaching Award, a Humboldt Research Fellowship, the title of EUROPT Fellow, and the Queen Elizabeth II Diamond Jubilee Medal. He is a fellow of the Canadian Academy of Engineering.

Michel Bierlaire (“Introduction to disaggregate demand models”) is a full professor in the School of Architecture, Civil and Environmental Engineering at École Polytechnique Fédérale de Lausanne (EPFL) (Switzerland). Since 2006, he is the director of the Transport and Mobility Laboratory and since 2009, the director of TraCE, the Transportation Center at EPFL. He holds a Ph.D. in Mathematical Sciences from the Facultés Universitaires Notre-Dame de la Paix (University of Namur, Belgium). He is the Editor-in-Chief of the *EURO Journal on Transportation and Logistics*, and an associate editor of *Operations Research*. He is the founder of hEART: the European Association for Research in Transportation.

Mitesh J Borad, MD (“Quantitative Imaging System for Cancer Diagnosis and Treatment Planning”) serves as the Director of the Liver and Biliary Cancer Research Program at Mayo Clinic at Mayo Clinic Arizona. He completed his medical oncology fellowship training at Tulane University School of Medicine and his post-doctoral studies at the Translational Genomics Research Institute in Phoenix, Arizona. His research interests comprise development of novel therapies in gastrointestinal cancers and study of genomic biomarkers in cancer.

J. Paul Brooks (“Metabolic Networks and New OR Models”) is an associate professor in the Department of Statistical Sciences and Operations Research and the Department of Supply Chain Management and Analytics at Virginia Commonwealth University. His research involves the use of optimization in developing new methods for data analysis and their application, and in other areas of applied optimization. Application areas include human microbiome data, computational biology, and scheduling. He is a member of the Council of the INFORMS Section on Data Mining and is active in the INFORMS Computing Society.

Frank E. Curtis (“Optimization Methods for Supervised Machine Learning”) is an associate professor in the Department of Industrial and Systems Engineering at Lehigh University. He received a Ph.D. from the Department of IEMS at Northwestern University, and was a postdoctoral researcher in the Courant Institute of Mathematical Sciences at NYU. His research focuses on the design and analysis of algorithms for solving large-scale nonlinear optimization problems. He received an Early Career Award from the ASCR Program of the U.S. Department of Energy and has received funding from various programs of the U.S. National Science Foundation.

Thomas T. DeLeon, MD (“Quantitative Imaging System for Cancer Diagnosis and Treatment Planning”) is a hematology and oncology fellow at Mayo Clinic Arizona. He completed his medical school and internal medicine training at the University of Hawaii. His research interests are in novel therapeutic strategies in gastrointestinal malignancies particularly hepatobiliary cancers.

Maged M. Dessouky (“Dynamic Tripsharing”) is a professor in the Department of Industrial and Systems Engineering at the University of Southern California and the Director of the Epstein Institute. He received B.S. and M.S. degrees from Purdue University and a Ph.D. in industrial engineering from the University of California, Berkeley. He is area/associate editor of *Transportation Research Part B: Methodological*, *IIE Transactions*, and *Computers and Industrial Engineering*, on the editorial board of *Transportation Research Part E: Logistics and Transportation Review*, and previously served as area editor of the *ACM Transactions of Modeling and Computer Simulation* and associate editor of *IEEE Transactions on Intelligent Transportation Systems*. He is a fellow of IIE and was awarded the 2007 Transportation Science and Logistics Best Paper Prize.

Awil Federgruen (“Competition in Multi-Echelon Systems”) is the Charles E. Exley Professor of Management of the Decision, Risk and Operations (DRO) Division of the Graduate School of Business at Columbia University where he served as Senior Vice Dean from 1997-2002 and as the Chair of the DRO division for many years. He obtained his doctorate in operations research at the University of Amsterdam in the Netherlands. He is a world renowned expert in the development and implementation of planning models for supply chain management and logistical systems. Much of his recent work focuses on competition, coordination and contracting within supply and service chains. He is the recipient of the 2004 Distinguished Fellowship Award by the Manufacturing, Service and Operations Management society, and was elected a presidential Fellow of the INFORMS society. He is currently the Editor-in-Chief of *Naval Research Logistics*, and a former departmental editor for the department of Manufacturing, Service and Operations of Management Science. He also served as associate editors for several flagship journals of his profession.

Michael C. Fu (“Markov Decision Processes, AlphaGo, and Monte Carlo Tree Search”) holds the Smith Chair of Management Science in the Department of Decision, Operations and Information Technologies at the Robert H. Smith School of Business, with a joint appointment in the Institute for Systems Research and an affiliate appointment in the Department of Electrical & Computer Engineering (both in the Clark School of Engineering), all at the University of Maryland, College Park. He received degrees in math and EECS from MIT in 1985 and a Ph.D. in applied math from Harvard University in 1989. He is the co-author of the books, *Conditional Monte Carlo: Gradient Estimation and Optimization Applications*, which received the INFORMS Simulation Societys 1998 Outstanding Publication Award, and *Simulation-Based Algorithms for Markov Decision Processes*, and has also edited/co-edited four volumes: *Perspectives in Operations Research*, *Advances in Mathematical Finance*, *Encyclopedia of Operations Research and Management Science* (3rd edition), and *Handbook of Simulation Optimization*. He served as department editor for stochastic models and simulation at *Management Science*, as simulation area editor for *Operations Research*, and on the editorial board of *Mathematics of Operations Research*, *INFORMS Journal on Computing*, *IIE Transactions*, and *Production and Operations Management*. He served as the OR Program Director at NSF from 2010–2012 and in 2015, and is a Fellow of IEEE and INFORMS.

Yinlin Fu (“Quantitative Imaging System for Cancer Diagnosis and Treatment Planning”) is Ph.D. student supervised by Professor Teresa Wu in School of Computing, Informatics, Decision Systems Engineering at Arizona State University. She received the B.S. in statistics from USTC, China in 2013. Her research interest is in statistical modelling and feature selection in unsupervised learning.

Nathan Gaw (“Quantitative Imaging System for Cancer Diagnosis and Treatment Planning”) received his Bachelors and Masters degrees in biomedical engineering from Arizona State University (ASU) in 2013 and 2014, respectively. He is currently pursuing a Ph.D. in industrial engineering at ASU. His primary research interests include statistical machine learning of medical images, semi-supervised learning, and mixed integer programming with applications in optimal worker team allocation. He also serves as the President of the ASU student chapter of INFORMS, and has begun several new initiatives, which include educational workshops, using mathematical skills to serve local non-profit organizations, and a competition to prepare students for presenting at the annual INFORMS conference.

Juan A. Gomez (“OR Approaches for Building Demand Response in a Smart Grid”) is pursuing the Ph.D. degree in industrial engineering at Polytechnique Montréal. He received the B.Eng. degree in industrial engineering in 2008 and the Masters degree in engineering from Pontificia Universidad Javeriana Colombia in 2011, for which he received the Outstanding Master’s Thesis prize. He is the recipient of the Mitacs Globalink Research Award for international exchange with Inria, France in 2017. He has three years of industrial experience as production planner/engineer. His current research interests are energy management, demand response, storage and optimization applied to smart grids.

Allen Holder (“Metabolic Networks and New OR Models”) is a professor of mathematics at the Rose-Hulman Institute of Technology. His research interests lie in mathematical programming and its applications to healthcare and biology. He was the recipient of the 2000 Pierskalla Award for his original work on the optimal design of radiotherapy treatments, and he received the 2015 Outstanding Scholar Award from the Board of Trustees at Rose-Hulman. He serves as an area editor for the *INFORMS Journal on Computing*, covering applications in biology, medicine, and healthcare. He enjoys undergraduate research and has published with many of his undergraduate students.

Ming Hu (“Competition in Multi-Echelon Systems”) is a professor of operations management at Rotman School of Management, University of Toronto. He received a Master’s degree in applied mathematics from Brown University in 2003, and a Ph.D. in operations research from Columbia University in 2009. His research explores strategic interactions among firms and between firms and consumers, in the context of revenue management, supply chain management and service operations management. Most recently, he focuses on operations management in the context of social buying, crowdfunding, crowdsourcing, and two-sided markets, with the goal to exploit operational decisions to the benefit of the society. He is the recipient of 2016 Wickham Skinner Early-Career Research Accomplishments Award by Production and Operations Management Society (POMS) and 2017 Management Science Best Paper Award in Operations Management.

Bahar Y. Kara (“Humanitarian Logistics”) is a professor in the Department of Industrial Engineering at Bilkent University. Professor Kara works on Operations Research applications in logistics. She has published many papers dealing with models and applications of network optimization problems. She is one of founding coordinators, and an executive board member for the European Working Group on Humanitarian Operations (Euro-HOpe). She is currently active in humanitarian logistics, mainly on relief logistics and refugee movement.

Simge Küçükyavuz (“Introduction to Two-Stage Stochastic MIP”) is an associate professor in the Department of Industrial and Systems Engineering at the University of Washington. Prior to joining the faculty at the University of Washington, she was a faculty member at the Ohio State University and the University of Arizona. She received her Ph.D. from the University of California, Berkeley. Her interests are in mixed-integer programming, large-scale optimization, optimization under uncertainty, and their applications. She is the recipient of the National Science Foundation CAREER Award, ICS Prize, and serves on the editorial boards of several journals.

Jing Li (“Quantitative Imaging System for Cancer Diagnosis and Treatment Planning”) is an associate professor in the Department of Industrial Engineering at Arizona State University. She received her B.S. from Tsinghua University in China and an M.A. in Statistics and a Ph.D. in industrial and operations engineering from the University of Michigan in 2005 and 2007, respectively. Her research interests are applied statistics, data mining, and quality and systems engineering. She is a founding co-director for an ASU-Mayo Clinic Imaging Informatics Lab. She is a recipient of NSF CAREER award. She is a member of IIE, INFORMS, and ASQ.

Virginie Lurkin (“Introduction to disaggregate demand models”) is a postdoctoral researcher in the Transport and Mobility Laboratory at École Polytechnique Fédérale de Lausanne (EPFL). Her research interests lie in the application of operations research to airline related business problems and the development and application of advanced models of air travel demand based on discrete

choice methods. She holds a Ph.D. in economics and management sciences from HEC-Liège (Belgium). In summer 2014 and 2015, she was a visiting scholar in the School of Civil and Environmental Engineering at the Georgia Institute of Technology. Her dissertation won the 2016 INFORMS Aviation Applications Dissertation Prize.

Vladimir Marianov (“Location of Emergency Response Services”) is a professor at the Department of Electrical Engineering of the Pontificia Universidad Católica de Chile. He earned M.S.E. and Ph.D. degrees from The Johns Hopkins University in 1987 and 1989, respectively, as well as an Electrical Engineering degree from Universidad de Chile in 1978. His teaching and research interests are in the areas of facility location and network design, with applications in communications networks, nature reserve selection, location of public services, location under congestion and location of competitive facilities. He has published over 70 research papers in numerous leading journals such as *Computers and Operations Research* and *European Journal of Operational Research*. He has co-edited two books on facility location foundations and applications, and is also author of several book chapters, on subjects including location of emergency systems, location in the public sector, location of jails, and competitive location.

Jie Ning (“Affine Markov Decision Processes”) is an assistant professor of operations at Weatherhead School of Management, Case Western Reserve University. She received a Ph.D. and M.S.E. in industrial and operations engineering, and an M.S. in physics from University of Michigan, and a B.S. in physics from the University of Science and Technology of China. Her research interests include Markov decision processes and their applications, the interface of operations and finance, and empirical operations management.

Fernando Ordóñez (“Dynamic Tripsharing”) is a professor in the Department of Industrial Engineering at the University of Chile. He received his mathematical engineering degree, from the University of Chile in 1997 and his Ph.D. in operations research from MIT in 2002. His research focuses on mathematical optimization models, uncertainty, algorithms, and applications of optimization to engineering and management science. His research was awarded the Wagner prize for Excellence in Operations Research practice in 2012.

Bhavika K. Patel, MD (“Quantitative Imaging System for Cancer Diagnosis and Treatment Planning”) completed radiology residency and a breast imaging fellowship from Emory University in Atlanta, GA. She is currently working as a senior associate consultant and assistant professor at Mayo Clinic, Arizona. Research interests include: (1) advancing breast imaging technologies to improve sensitivity and specificity of breast cancer detection, (2) exploring personalized medicine to better detect early and pre-cancerous states, and (3) utilizing computer aided detection tools to better enable prediction and assessment of breast cancer treatment response.

Sinem Savaser (“Humanitarian Logistics”) received her B.S and M.Sc. degrees from the Department of Industrial Engineering at Bilkent University in 2015 and 2017. She is currently a Ph.D. student in the Rotman School of Management, University of Toronto.

Katya Scheinberg (“Optimization Methods for Supervised Machine Learning”) is the Harvey E. Wagner Endowed Chair Professor at the Department of Industrial and Systems Engineering at Lehigh University. She received her Ph.D. degree in operations research from Columbia University after which she has worked at the IBM Research before joining Lehigh in 2010. Katya spent 2016–2017 at Google Research and University of Oxford. Katya's research areas are in developing and analyzing practical algorithms for continuous optimization. She has been focusing on large-scale optimization method for big data applications and machine learning since 2000. In 2015, jointly with Conn and Vicente, she received the Lagrange Prize for work on derivative free optimization.

Suvrajeet Sen (“Introduction to Two-Stage Stochastic MIP”) is a professor at the Daniel J. Epstein Department of Industrial and Systems Engineering at the University of Southern California. Prior to joining USC, he was a professor at Ohio State University, and University of Arizona. He has also served as the Program Director at NSF. Professor Sen is a Fellow of INFORMS, and was

part of the team that won the INFORMS Computing Society Prize in 2015. Parts of this tutorial are connected to that work.

Alvin C. Silva, MD (“Quantitative Imaging System for Cancer Diagnosis and Treatment Planning”) is an associate professor of radiology in the Mayo Clinic College of Medicine. He is Co-Chair for Radiology Research DWG and co-founder & medical director for imaging Clinical Outcomes Response Evaluation Lab that supports cancer trials with comprehensive, quantitative imaging services at Mayo Clinic Arizona. He completed radiology residency at Loyola University Medical Center in Chicago and Body Imaging Fellowship at Georgetown University Medical Center in Washington, DC. Research interests include the validation and implementation of novel, multimodality imaging techniques for the abdomen; and the development and translation of imaging biomarkers for precision oncologic medicine.

Lujia Wang (“Quantitative Imaging System for Cancer Diagnosis and Treatment Planning”) received her M.S. degree in probability theory and mathematical statistics from the Chinese Academy of Sciences in 2016. She is currently pursuing a Ph.D. degree in industrial engineering under the instruction of Prof. Jing Li. Her research interests include machine learning, data mining, and health care analytics.

Teresa Wu (“Quantitative Imaging System for Cancer Diagnosis and Treatment Planning”) is a professor of industrial engineering in the School of Computing, Informatics, Decision Systems Engineering at Arizona State University. She received her Ph.D. in industrial engineering from the University of Iowa in 2001. Her current research interests include: swarm intelligence, distributed decision support, distributed information system, health informatics. Professor Wu has articles published more than 80 journal articles in journals such as *IEEE Transactions on Evolutionary Computation*, *IEEE Transactions on Pattern Analysis and Machine Intelligence*, *Information Science*. She is currently serving as the editor-in-chief for *IIE Transactions on Healthcare Systems Engineering*.

Yanzhe Xu (“Quantitative Imaging System for Cancer Diagnosis and Treatment Planning”) received his M.S. degree in electrical engineering and M.S. degree in computer science from Arizona State University in 2015 and 2017, respectively. He is currently pursuing a Ph.D. degree in industrial engineering under the instruction of Prof. Teresa Wu. His research interests include deep learning, imaging informatics, operation research.

Christine Zwart (“Quantitative Imaging System for Cancer Diagnosis and Treatment Planning”) received her doctorate from Arizona State University in biomedical engineering with an emphasis on medical imaging and image processing for medical, commercial, and military purposes. Her doctoral work was supported by a National Science Foundation graduate research fellowship, an Engineering Innovation Fellowship from the American Society for Engineering Education, a Science Foundation Arizona graduate research fellowship, and a BioDesign Institute graduate research fellowship. Her most recent position was with the Mayo Clinic in Scottsdale Arizona where she facilitated the scholarly activities of the Radiology Department as the Vice Chair for Research.
