With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

Contributors

W. A. Buehring recently retired as senior scientist from Argonne National Laboratory, where he still serves as a consultant on infrastructure assurance and applications of decision analysis. He was the technical leader for analysis and assessments at Argonne's Infrastructure Assurance Center and was involved in the analysis of energy and environmental systems for many years. He served on the energy team at the President's Commission on Critical Infrastructure Protection in Washington, DC. He earned his PhD in nuclear engineering from the U of Wisconsin-Madison.

Paul Carboneau is an associate in the operations, strategy, and effectiveness practice at McKinsey & Co. He previously worked at Dell Inc. for two years in various supply-chain positions. He earned his graduate degree in industrial engineering at the U of Michigan.

Lloyd Clark attended the Massachusetts Institute of Technology from 1980 to 1990, earning BS, MS, and PhD degrees in electrical engineering and computer science. During that period, he also worked for several companies, including Production Services Corporation, International Harvester, and the Naval Electronic Systems Engineering Center. Upon graduating, he joined Schlumberger Austin Technology Center in Austin, Texas, where he is now principal engineer.

Milind Dawande earned his PhD from Carnegie Mellon U in 1997. He teaches at the U of Texas–Dallas. His research interests are modeling complex problems from operations management and OR as discrete optimization problems and devising new algorithms to solve them efficiently.

John L. Fazel directs the iMBA, Penn State's online MBA program. His research is an eclectic array of applied microeconomic analysis with a recent emphasis on sports economics. Some personal interests include biking, golfing, traveling, and reading science fiction.

Srinagesh Gavirneni teaches at the Kelley School of Business at Indiana U. Previously he was the chief algorithm design engineer of SmartOps, a software architect at Maxager Technology, Inc., and a research scientist with Schlumberger. His undergraduate degree from IIT-Madras is in mechanical engineering, and he holds master's and doctoral degrees in manufacturing and operations management from Carnegie Mellon U. His research interests are in supply-chain management, inventory control, scheduling, mathematical programming, and simulation.

William V. Gehrlein teaches at the U of Delaware. He earned an MS in physics and a PhD in quantitative business analysis from Penn State. His research interests are decision analysis and social-choice theory, and he has published over 100 articles.

Jayant Kalagnanam earned his PhD from Carnegie Mellon U in 1991. He is a research manager at IBM's T. J. Watson Research Center. He works on applications of analytics to real-world business problems.

Roman Kapuscinski is the Sanford R. Robertson Assistant Professor of Business Administration at the U of Michigan Business School. His research interests include supply-chain management with emphasis on the role of ownership structure in coordination, value of information, and lead-time quotation. He earned doctoral and master's degrees in industrial administration at Carnegie Mellon U.

J. M. Keisler teaches management sciences and information systems at the U of Massachusetts Boston. He earned his PhD in decision sciences from Harvard and his MBA from the U of Chicago. Prior to entering academia, he spent a decade as a decision analyst for Strategic Decisions Group, Argonne National Laboratory, General Motors, and as an independent consultant. His current research interests include R&D portfolio management, language in interactive decision making, decision analysis software tools, and applications of value of information techniques.

Hemant V. Kher teaches operations management at the U of Delaware. He earned a PhD in production and operations management at the U of South Carolina. Before pursuing graduate studies, he worked in the quality control and production planning departments of Amforge Industries in India. His research interests are shop-floor control issues, and he has published widely.

Ho Soo Lee earned his PhD from Northwestern U in 1985. He manages the Deep E-commerce group at IBM's T. J. Watson Research Center. His research interests are electronic commerce and artificial intelligence.

P. D. McLaughlin has been with Battelle and the Pacific Northwest National Laboratory for over 13 years, serving in program and line management positions and as staff scientist/engineer. He has an MS in industrial engineering from Kansas State U. At PNNL he has applied OR and analysis in programmatic risk management, system requirements development, modeling and simulation, and counter-drug/counter-terrorism for the US Department of Energy, Department of Defense, and other federal, state, and local government agencies. He retired from the US Army after 23 years, having served as an air defense officer, aviator, and OR/system analysis officer.

Ido Millet teaches MIS at Penn State Erie. He enjoys mixing teaching, research, consulting, and software development with hobbies, such as skiing, playing bridge, and flying gliders.

Robert Moore runs the six-sigma program for Dell's world-wide procurement department. He has been with Dell for four years in supply-chain and hard-disk-drive commodity management. He earned degrees at the U of Michigan and at Texas A&M U.

Diane H. Parente teaches management at Penn State Erie. She is a second-career academic with interdisciplinary research interests. Her main focus is on the impact of cross-functional relationships on the organization. She is interested in sports, especially soccer, reading, and volunteer activities.

Gábor Pataki teaches OR at the U of North Carolina at Chapel Hill. Previously he was a postdoctoral research scientist, then assistant professor at Columbia U. His undergraduate degree is in mathematics and computer science from Eotvos Lorand U in Budapest, and he holds master's and doctoral degrees in algorithms, combinatorics, and optimization—a joint program in OR, computer science, and mathematics—from Carnegie Mellon U. His research interests are in semidefinite programming and integer programming.

Chandra Reddy earned his PhD from Oregon State U in 1998 and has since been working at IBM on optimization problems related to steel-mill operations. His research interests include artificial intelligence and machine-learning techniques related to optimization and data mining.

Bill Reeves is leading an effort to improve the fulfillment of portables orders at Dell Inc. He has spent three years at Dell in a variety of manufacturing and supply-chain roles. He earned his graduate degree in industrial engineering at the U of Michigan.

M. A. Robershotte has been a staff scientist at Battelle Pacific Northwest National Laboratory for over eight years. He is a licensed professional industrial engineer with MS degrees in engineering economic systems and in civil engineering from Stanford. He applies decision analysis, programmatic

risk management, engineering management, modeling, and other analytical methods and processes for the US Department of Energy, Department of Defense, and other federal, state, and local government agencies. A career army officer prior to joining Battelle, he taught decision analysis, OR, and engineering management at the US Military Academy as an associate professor.

Stuart Siegel earned his PhD from Carnegie Mellon U in 1997. He is a member of IBM's business consulting services practice in the supply-chain optimization division. His interests are business process optimization, software development, and long-distance bicycle touring.

Mark Trumbo earned a master's in applied science in 1994 from Simon Fraser U, Vancouver. He is lead consultant at Dragonfly Consulting, a company based in Ottawa, specializing in production planning and scheduling software for the steel industry.

Ray R. Venkataraman teaches management at Penn State Erie. His hobbies include singing and listening to Indian classical music, reading, and the game of cricket.

R. G. Whitfield is a decision scientist in the decision and information sciences division at Argonne National Laboratory, where he worked for 25 years. He has conducted decision analyses for numerous government agencies, led the development of several PC-based decision-support systems, and led major EPA-sponsored risk assessments. He earned a PhD in industrial and systems engineering from the Illinois Institute of Technology, an SMEE from the Massachusetts Institute of Technology, and a BSEE from the U of Pittsburgh.

Rachel Q. Zhang is assistant professor at the Johnson Graduate School of Management, Cornell U. Her research interests lie in production and inventory control, supply-chain management, coordination of operations, finance, and marketing, and bidding strategies in competitive exchange markets.
