With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

 Contributors

Canser Bilir served as research assistant in 2004 while earning his MBA with graduate certificate in logistics and supply-chain management at the U of Missouri–St. Louis. He also earned a degree in management engineering from Istanbul Technical U in Turkey. He has returned to his native Turkey for a career in business.

Javier Faulin teaches OR at the Public U of Navarra, Pamplona, Spain. He has also taught at the U of Navarra (Spain), at UNED (Spain), at the U of Sabana (Bogotá, Colombia), at the Universitat Oberta de Catalunya (Barcelona, Spain) and at the U of Surrey (Guilford, United Kingdom). His interests are mainly in logistics applications of OR models. He also does research on applications of simulation in queueing theory and transportation. He has a strong interest in distance training over the Internet.

Marc Feyhl is an account manager in HP's strategic planning and modeling (SPaM) team. He manages the relationship with HP EMEA's printing, digital imaging, high-end computing, storage, and service businesses, identifying opportunities for rigorous quantitative analysis, matching them with SPaM's capabilities, and initiating related projects. His special interest is distribution and manufacturing network design, applying activity-based pricing to ensure efficient value chains, and operations modeling and design during postmerger integration. He joined HP in 1996. Prior to working with SPaM he held various positions in finance and supply-chain management within HP's printing and digital imaging business. He has a degree in industrial engineering from Esslingen U of Applied Sciences, Germany and an MBA from Syracuse U, New York.

Gary L. Hogg is chairman of the industrial engineering department at Arizona State U. He holds a BS in mechanical engineering from Texas A&M U and MS and PhD degrees in industrial engineering from the U of Texas at Austin. His research interests are automated quality systems, manufacturing systems, and applied OR.

Vega W. Huang is a senior assistant manager and risk analyst for Citibank Taiwan Risk Management. She specializes in mortgage-related policy and credit-approval reviews and analysis. She earned her MS in statistics from National Cheng Kung U in 2000.

Kuo-yao Hung is a vice president and senior risk analyst for Citibank Taiwan Risk Management. He manages retail banking MIS and scores related projects for multiple consumer loan products (including mortgages). He earned his master's degree from the American Graduate School of International Management in 1992.

Steve Kakourous is a process technology manager in Hewlett-Packard's strategic planning and modeling (SPaM) team. He works with all HP businesses to improve their

management and engineering processes by engaging in rigorous analysis and applying state-of-the-art technologies. In recent research, he focused on supply-chain network design, forecasting and planning, and product warranty and reliability. His work has been published in *OR/MS Today*, *Quality and Reliability Engineering International*, *APICS: The Performance Advantage*, *Warranty Week*, and HP internal publications. He is the author of several patents in supply chain and warranty. He has an MS in OR from Stanford U and a BS in applied mathematics from the Aristotle U, Thessaloniki, Greece.

Mark Kaplan is a Citibank vice president and senior credit officer assigned as country risk manager for Citibank's Taiwan consumer business. He has managed bankcard and retail banking credit policy in the US and internationally (with emphasis on the greater China market). He earned his MBA from New York U in 1983 and an MA in East Asian studies from Claremont Graduate School in 1973.

Steven O. Kimbrough earned his undergraduate, MS (industrial engineering), and PhD (philosophy) degrees at the U of Wisconsin at Madison. While a student there he served for five years as the youngest person appointed to date on a State of Wisconsin policy-making board, with two years as chairman. He also worked as a policy analyst and as a speechwriter and created a small but successful lobbying business. Against much advice, he gave up a promising career in public policy and has been on the faculty of the Wharton School of the U of Pennsylvania since 1984. He is delighted to have returned to his roots with the study reported in this paper.

Claude Laval is a supply-chain expert in HP, working as an internal consultant in the strategic planning and modeling team. He runs analyses to improve asset utilization and operational excellence throughout the company. As account manager for the personal system group, he manages the relationship with the supply-chain community of this group, helps to identify opportunities, and ensures that SPaM makes a valuable contribution. Prior to joining SPaM in 2001, he was a supply-chain architect within the worldwide PC organization. He has built up an extensive knowledge of the supply-chain world since 1977 at HP and three other companies. He has an MS in industrial engineering from the Ecole Catholique des Arts et Métiers in Lyon, France and an executive MBA (joint program of Henley College, United Kingdom, and Grenoble Business School, France).

Tim Lindemann is a director of airport services for America West Airlines. He has been with the company for over 13 years. His responsibilities include airport policies and procedures. He holds a BS in finance from the U of Wisconsin at Stevens Point and an MBA from Arizona State U.

Anthony V. Mulé is the senior vice president of customer service at America West Airlines. His responsibilities include overseeing all aspects of America West's airport operations, airport customer service and service planning, training, aviation security, and on-board customer service, including entertainment, catering, and flight attendants. Mulé earned a BS in engineering from New York U in 1972. He was awarded an honorary doctorate in philanthropy by Pepperdine U in 1985. He served in the US Navy and is a Viet Nam veteran.

Frederic H. Murphy is a professor in the department of management science and operations management in the Fox School of Business and Management at Temple U. He has published in the areas of OR and energy policy analysis and modeling, optimization, game theory, computing economic equilibria, and visual tools for building mathematical models. He was editor in chief of *Interfaces*. He is an area editor of *Operations Research* and the vice president of publications for INFORMS.

Alexandra M. Newman is an assistant professor in the division of economics and business at the Colorado School of Mines. Prior to her appointment there, she was a research assistant professor in the OR department at the Naval Postgraduate School.

Pablo Sarobe is an industrial engineer with interests in MS. He works for Tecnica Corporation and has analyzed several cases of companies with managerial problems since 2000. With other participants, he earned an international award for engineering projects with the design of a recycling plant for washing machines and dishwashers. His main interests are logistics, e-commerce, and business-to-business applications.

Dan Shrimpton is an OR analyst and a major in the United States Army. He has worked in military manpower modeling for nine years.

Jorge Simal is an industrial engineer with interests in management science. He has worked for Tecnica Corporation for four years on different projects. Other fields of interest are developing ERPs (enterprise resource planning) for companies using Java, SQL, HTML, and XML. He has also worked on implementing the quality system EFQM (European Foundation for Quality Management) at the Public University of Navarra.

L. Douglas Smith teaches MS and directs the Center for Business and Industrial Studies in the College of Business Administration at the U of Missouri–St. Louis. He earned his PhD from the U of Minnesota in 1972. His research concerns the development of analytical models and computer-based systems for solving managerial problems.

Menkes H. L. van den Briel earned an MS in econometrics with a major in OR from the U of Maastricht. He conducted research for his MS at the National Aerospace Laboratory, which resulted in the thesis “Algorithms for CDM on slot allocation: Slot swapping and slot shifting.” After working for the consulting company ORTEC for a year, he began work on a PhD at Arizona State U. His main research interests are artificial intelligence, automated planning, and scheduling.

J. René Villalobos teaches industrial engineering at Arizona State U. He holds a BS in mechanical engineering from the Tecnológico de Chihuahua, an MS in industrial engineering from the U of Texas at El Paso, and a PhD in industrial engineering from Texas A&M U. His research interests are automated quality systems, manufacturing systems, and applied OR.
