With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

Contributors

Karthik Balakrishnan is a doctoral student at the Stern School of Business at New York University.

Gerald G. Brown is Distinguished Professor of OR at the Naval Postgraduate School in Monterey, California. He is an optimizer and a retired naval officer.

Phil Degenhardt has worked as a software developer and project manager in the finance and transport sectors. He works as an IT consultant and is exploring the application of service-oriented architectures to vehicle rental operators. He lives on the edge of Tasmania's Tarkine wilderness and reckons there's no better place for cutting code.

Andreas T. Ernst is the leader of CSIRO's business decision tools research group. He completed a PhD in network optimization at the University of Western Australia and joined CSIRO in 1995. He has worked on vehicle scheduling problems since 1998 as well as a range of other OR applications including rostering of train drivers and police officers, production scheduling for a wool processing company, and improving operations of a large coal terminal. His research interests include hub location, network optimization, and heuristics.

Michael R. Galbreth teaches MS at the Moore School of Business, University of South Carolina. Prior to earning his Ph.D. in operations management from Vanderbilt University, he was a manager with Bearing Point Consulting. His current research interests include remanufacturing and reverse logistics, Web-based technology adoption, and supply chain management. His work has appeared or is forthcoming in several journals.

Mark Horn holds professional degrees in architecture and city planning and has practiced in these fields. In the early 1980s he became involved in the development of decision-support systems for land planning and in the mining and petroleum industries. Since joining CSIRO in 1987, he has carried out research in the fields of spatial information systems, environmental planning, transportation analysis, and OR.

Ananth Iyer is Susan Bulkeley Butler Chair in operations management and professor of management at the Krannert School of Management, Purdue University. He is the

director of the Global Supply Chain Management Initiative at Krannert. His research interests are in the area of supply chain management, focusing on modeling and empirical analysis of the integration of information and inventory systems, valuation of supply contracts, incorporation of price promotions into logistics models, improving distribution systems and their time guarantees, and identifying beneficial collaboration securely. He serves on the editorial boards of several publications. He was president of the Manufacturing and Service Operations Management Society, a subdivision of INFORMS, for the 2002–2003 academic year.

Deborah L. Kellogg teaches operations management in the Business School at the University of Colorado at Denver and Health Sciences Center. She earned her PhD in operations management from the University of Southern California, an MS in information systems from the University of Colorado, and her BS in nursing from Pacific Lutheran University. Her research interests include service system design, service quality, health-care service operations, and assessment and quality in business education.

Philip Kilby earned his PhD in OR in 1992 from the University of Queensland, Australia. He has worked for private industry and for Australia's national research organization, the CSIRO, where this work was conducted. He is now with National Information and Communications Technology Australia (NICTA) where he conducts research at the interface between OR and artificial intelligence, with particular application to traffic control.

Jeffrey E. Kline is a senior lecturer in the OR department at the Naval Postgraduate School. He has over 26 years of naval operational experience including commanding two US Navy ships and serving as deputy operations for commander, sixth fleet. In addition to his sea service, he spent three years as a naval analyst in the Office of the Secretary of Defense. He is a 1992 graduate of the Naval Postgraduate School's OR program, where he earned the Chief of Naval Operations Award for Excellence in Operations Research. He is a 1997 distinguished graduate of the National War College. He earned his BS in industrial engineering from the University of Missouri in 1979. His teaching and research interests are joint campaign analysis and applied analysis in operational planning.

Mohan Krishnamoorthy is a research and business leader at CSIRO. His responsibilities include research strategy, setting research and business directions and goals, and engaging with industry, particularly the health, services, and transport industries. His OR background includes decision-support provision through optimization and simulation techniques. His main interests are in complex routing and scheduling problems, manpower scheduling, rostering, the location of spatially interacting facilities, vehicle dispatch problems, constrained spanning trees, neural networks, and a variety of OR problems the airline industry faces. He manages a portfolio of research disciplines including optimization, scheduling, rostering, and process improvement.

Larry J. LeBlanc teaches operations management and information technology in the Owen Graduate School of Management at Vanderbilt University. His research interests include supply chain analysis, application of spreadsheet optimization models, implementation of algorithms for large-scale optimization models, and telecommunication network design and analysis. He has approximately 60 publications in refereed journals and has given presentations at 45 universities and organizations abroad.

Michael Moran has worked in various capacities in the health sectors in Ireland and Australia. More recently he was a senior business analyst in a large recreational vehicle hire company in Australia. Currently he consults on developing software for the travel industry.

Thomas R. Nitsch is a management consultant at McKinsey & Company, Inc., in Germany. His dissertation from the industrial engineering and operations research department, University of California at Berkeley, focused on managing variety in automobile assembly plants.

Richard E. Rosenthal teaches OR at the Naval Postgraduate School (NPS) in Monterey, California. He has been on the NPS faculty since 1984 and served as department chairman from 1997 to 2000. He was the editor in chief of *Naval Research Logistics* from 1988 to 2003 and currently serves as a vice president of INFORMS. He has a passionate interest in the application of optimization. His research projects for the US military have touched all branches and include studies of transportation, logistics, manpower, and operations. He has also worked on civilian applications, most recently as a visiting senior scientist at Hewlett-Packard Labs. He won the INFORMS Prize for the Teaching of OR/MS Practice and several research awards. He earned a BA in mathematical sciences from the Johns Hopkins University in 1972 and a PhD in OR from the Georgia Institute of Technology in 1975.

Sridhar Seshadri is the Toyota Motor Term Professor of Information, Operations and Management Science at the Leonard N. Stern School of Business, New York University. He earned his PhD in MS from the University of California at Berkeley. He is a Fellow of the Institution of Engineers (India). His research interests include empirical and analytic models of operational systems and the interface between finance and operations. He serves on the editorial boards of several publications.

Anshul Sheopuri is a doctoral student at the Stern School of Business at New York University. His research interests span different areas of supply chain management. He is interested in sourcing decisions within the context of inventory models and service levels in quality contracts.

Jayashankar M. Swaminathan is Kay and Van Weather- spoon Distinguished Professor and chair of the operations, technology, and innovation management area at the Kenan-Flagler Business School at the University of North Carolina at Chapel Hill. His research interests are in the areas of supply chain management, mass customization, electronic commerce, and global operations in emerging economies such as India and China. He has published widely. He earned his doctoral and master's degrees in industrial administration with a specialization in management of manufacturing and automation, a joint program between GSIA and computer science, at Carnegie Mellon University. He earned his bachelor's degree in computer science and engineering from the Indian Institute of Technology, Delhi. Prior to joining the University of North Carolina, he was an assistant professor at the Walter Haas School of Business at the University of California, Berkeley.

Steven Walczak teaches information systems at the University of Colorado at Denver and Health Sciences Center. He earned his PhD in artificial intelligence from the University of Florida, his MS in computer science from the Johns Hopkins University, and his BS in mathematics from the Pennsylvania State University. His current research interests are in applied and empirical artificial intelligence systems including expert systems, neural networks, and intelligent agents to e-commerce and health domains, and the business culture and managerial effects of knowledge management and organizational learning.

Alan R. Washburn is Distinguished Emeritus Professor of OR at the Naval Postgraduate School in Monterey, California. His areas of interest include search theory, optimization, statistics, probability analysis, and game theory. He has published widely. In his spare time he enjoys being out of doors.
