With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

Contributors

Jason Amaral is founder and managing director of Emeraldwise, a consultancy that advises companies on supply chain, product engineering, and outsourcing strategy. While at Hewlett-Packard, he led the Design for Supply Chain practice area for Strategic Planning and Modeling (SPaM). A cofounder of the Procurement Sciences Institute and on the alumni advisory council for MIT's Engineering Systems Division, he has also worked at Siemens, Alcan, SeeCommerce, and Adexa. He has published widely.

Mathieu Balez cofounded Syllogix Inc, a management science consultancy based in Montreal, Canada and then worked as an associate at RPO Management Consultants in Vancouver, Canada. Then he turned his attention to Internet media pursuits, first helping launch Defensio, an intelligent spam filter for Web applications, and most recently working as a product manager in Google's mobile products group in London, UK. He earned a BSc in communications engineering and an MSc in OR, both from Queen's University in Kingston, Canada.

Ingrid Farasyn works in Procter & Gamble's Business Analysis Solutions organization, an in-house modeling, decision support, and consultancy group driving data-based decision making. She earned engineering degrees from Leuven in Belgium and the University of Calgary in Canada.

Chris Fry is president and CEO of Strategic Management Solutions, a management consultancy specializing in business analytics that helps businesses leverage the power of analytics to drive strategic decisions in supply chain management, product and complexity management, and pricing.

Cigdem Z. Gurgur teaches in the Division of Economics and Business at Colorado School of Mines. She earned her PhD in industrial and systems engineering from Rutgers, The State University of New Jersey. She holds an MS in management science and OR from Warwick Business School in England, and an MS

in mathematical and applied statistics from Rutgers University. Her work experience in the private sector includes research associate positions at the Management Science Group of Merrill Lynch and BEA Systems. Her expertise and research interests are in stochastic and simulation modeling with applications in logistics, financial optimization, risk assessment, and analysis.

Jeffrey W. Herrmann teaches at the University of Maryland, where he holds a joint appointment with the Department of Mechanical Engineering and the Institute for Systems Research. He earned his BS in applied mathematics from Georgia Institute of Technology. As a National Science Foundation Graduate Research Fellow from 1990 to 1993, he earned his PhD in industrial and systems engineering from the University of Florida. He is a member of INFORMS, ASME, IIE, SME, and ASEE.

W. J. Hurley teaches at the Royal Military College of Canada where he specializes in military OR, decision analysis, game theory, and OR in sports.

Yusuf Jafry specializes in dynamic systems, simulation, and software development. With a master's degree from MIT and a doctorate in aerospace control systems from Stanford University, he has 10 years of experience developing advanced mission concepts and dynamic simulations for the space sector. He developed the award-winning WaveWarp, a real-time, interactive signal processing system. He cofounded Risk Integrated and leads the software development activities.

Dorothea Kuettner is the managing director of Athena Insight. She was a Distinguished Technologist with Hewlett-Packard's Strategic Planning and Modeling team (SPaM), where she helped HP divisions worldwide to improve their supply chain efficiencies. Through her use of analytical modeling and expertise in information systems, she provides data-driven support for strategic and operational decisions

in the areas of inventory optimization, supply chain design, forecasting and planning, and warranty chain management. She has published widely and has spoken at the Institution of Business Forecasting conference (IBF) and the Warranty Chain Management conference.

Andrew Kumiega has automated processes including CNC machining, chemical manufacturing, confectionary, pharmaceutical manufacturing, and financial trading systems in industry as an industrial engineer. He has worked in senior level positions at financial institutions and now works at a proprietary trading firm and is an adjunct professor at the Illinois Institute of Technology. He is a member of the American Society of Quality Control and is a Certified Quality Engineer, a Certified Quality Auditor, and a Certified Software Quality Engineer. He is a founding member of the Market Technology Committee of the Certified Trading System Developer (CTSD) program at i4MT.

Christopher Marrison is a risk management consultant with experience in trading risk, credit risk, business control, asset/liability management, emerging markets, commercial real estate, and project finance. He is the author of *The Fundamentals of Risk Measurement* (McGraw-Hill 2002). He was an engineering officer in the Royal Air Force and earned his PhD from Princeton University. He cofounded Risk Integrated and leads methodology development activities.

Alexandra Medina-Borja is an assistant professor and codirector of UPRM's International Service Systems Engineering Research Lab in the Department of Industrial Engineering at the University of Puerto Rico at Mayagüez. Previously she managed the OR and analysis unit of the American Red Cross, National Headquarters in Washington, DC. She earned her PhD in industrial and systems engineering from Virginia Tech. Her research interests are design and optimization of service operations, service quality and outcome measurement, complex systems analysis, development of performance measurement systems, knowledge discovery with data mining applications, management systems engineering, and change management.

Joseph Milner teaches operations management at the Joseph L. Rotman School of Management at the University of Toronto. Prior to his appointment at the Rotman School, he was an assistant professor at

Washington University in St. Louis. He earned a PhD in OR from the Massachusetts Institute of Technology. His current research focuses on developing models of contracting in service supply chains including outsourced call centers, and dynamic pricing for supply chain fulfillment. He has published on supply chain capacity expansion in new and developing markets, contingent labor contracting, flexible supply contracts, and inventory and sourcing strategies from primary and secondary markets such as spot markets.

Charles T. Morley earned an MS in engineering and technology management from the Colorado School of Mines and a BS in mechanical engineering from the University of Colorado at Denver. He leads strategic business initiatives for Lockheed Martin Space Systems Company facility operations and services in Denver, Colorado. He is a graduate of Lockheed Martin's operations leadership development program, holds a Project Management Professional certification, and has a background in test engineering and construction project management.

Thomas Olavson directs the Strategic Planning and Modeling (SPaM) group at Hewlett-Packard. SPaM is an analytics group that works with HP businesses through consulting engagements to drive innovation and data-driven decisions in HP operations. SPaM has been supporting HP businesses on mission-critical problems in supply chain and other areas for over 15 years.

Anton Ovchinnikov teaches MBA decision analysis courses at the Darden School of Business, University of Virginia. He specializes in management science, decision analysis, and operations management. On the theoretical side, his research interests include service operations, revenue management, operations strategy, and game theory as well as integer programming and combinatorial optimization; on the applied he is interested in data-driven applications in business, government, and the not-for-profit sector. He taught MBA and executive-level management science and supply chain management at the University of Toronto's Joseph L. Rotman School of Management. He earned a PhD in operations management from the University of Toronto. Prior to his academic career, he co-owned an industrial and architectural design business and worked in Germany, The Netherlands, and Russia in commercializing high-tech developments.

Kalyan S. Pasupathy teaches in the Department of Health Management and Informatics at the University of Missouri, Columbia. He earned his doctorate in industrial and systems engineering from Virginia Tech. His research interests include performance measurement, operations analysis and engineering of health service systems, integrating information systems, and developing evidence-based approaches for managerial decision making.

Koray Perkoz works in Procter & Gamble's Business Analysis Solutions organization, an in-house modeling, decision support, and consultancy group driving data-based decision making. He earned a BSc in engineering and an MBA from the Middle East Technical University in Ankara, Turkey.

Ulrike Umkehrer-Neudeck is a managing director of Hypo Real Estate Systems GmbH, a subsidiary of, and IT service provider for, Hypo Real Estate Bank International AG, Munich. Hypo provides its customers with commercial real estate lending prod-

ucts, from classical Pfandbrief-based mortgages to large volume investment banking facilities. The bank's product offering is primarily geared to internationally active medium and large real estate investors and developers.

Wim Van de Velde works in Procter & Gamble's Business Analysis Solutions organization, an in-house modeling, decision support, and consultancy group driving data-based decision making. He earned an MBA from Leuven University in Belgium.

Ben Van Vliet is a lecturer at the Illinois Institute of Technology's Stuart School of Business, where he also serves as associate director of the MS financial markets program and teaches quantitative finance, C++ and .NET programming, and automated trading system design and development. He also teaches recurring seminars for The Technical Analyst group in London. He is vice chairman of the Institute for Market Technology, where he chairs the advisory board for the Certified Trading System Developer (CTSD) program.
