With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes.

 Contributors

Georgia Bekiou is the Director of Ambulatory Services at Fraser Health, the largest health authority in British Columbia, Canada. In her previous position with Fraser Health, she was the Director of the Acute Care Capacity Initiative, among Canada's largest health care planning initiatives. In all of her leading roles, she brings a planning approach based on evidence, innovation, and data-driven decision-making models.

Michael W. Carter is a professor in the Department of Mechanical and Industrial Engineering at the University of Toronto and Director of the Centre for Research in Healthcare Engineering. In 2000, he received the CORS Award of Merit for lifetime contributions to Canadian Operational Research. He is on the editorial board for the *Journal of Scheduling* and *Health Care Management Science*.

James Cocroft, MA, is currently responsible for programming and data management for the division of population science in the Department of Medical Oncology at Jefferson Medical College, Thomas Jefferson University. He has conducted data analysis for numerous grants and research studies in cancer prevention and control as well as HIV research for over 15 years.

Amy Cohn is an assistant professor in the Department of Industrial and Operations Engineering at the University of Michigan. Her primary research focuses on applied combinatorial optimization problems, particularly in the areas of healthcare scheduling, transportation, and logistics.

Constantine Daskalakis, ScD, is an associate professor of biostatistics in the Department of Pharmacology and Experimental Therapeutics at Thomas Jefferson University. His main research interests include multiple-source data, epidemiologic methods, cancer screening, and obesity.

Scott Dellana is an associate professor of operations management and is the Supply Chain Management Area Coordinator at East Carolina University in Greenville, North Carolina. He teaches courses in operations and supply chain management and researches in quality management and control, forecasting, and process mathematical modeling.

Justin Esses is a fellow at Massachusetts General Hospital in Boston. He is a former chief resident of the psychiatric residency program at the Boston University School of Medicine.

Bruce L. Golden holds the France-Merrick Chair in Management Science in the Robert H. Smith School of Business at the University of Maryland. His research interests include network optimization, health care, and applied operations research. Since 1999, he has served as editor-in-chief of *Networks*. Before that, he was editor-in-chief of the *INFORMS Journal on Computing*.

Paul Griffin is a professor in the H. Milton Stewart School of Industrial and Systems Engineering. His research and teaching interests are in health and supply chain systems. In particular, his current research focuses on cost-effectiveness modeling of public health interventions, health logistics, health access and economic modeling, and supply chain coordination and control, including pricing and contracting mechanisms. He is codirector of the Center for Health Care Logistics.

Reidar Hagtvedt earned a PhD in engineering at the H. Milton Stewart School of Industrial and Systems Engineering, Georgia Institute of Technology, and a PhD in business from the Robinson College of Business, Georgia State University. He holds a joint appointment in health-care operations management in the Department of Finance and Management Science at the University of Alberta School of Business and iCare.

Thomas Hanne received a master's degree in economics from Ruhr-Universität Bochum, a master's degree in computer science from Universität Dortmund, and a PhD in economics from FernUniversität in Hagen. From 1999 to 2007 he worked at the Fraunhofer Institute for Industrial Mathematics in the Department of Optimization as a senior scientist. In 2007 he joined the University of Applied Sciences Northwestern Switzerland faculty as a professor of information systems. He has authored about 40 journal and conference articles. His current research interests include multicriteria decision analysis, evolutionary algorithms, metaheuristics, scheduling, discrete-event simulation, logistics, and supply chain management.

Pinar Keskinocak is an associate professor in the School of Industrial and Systems Engineering and the cofounder and codirector of the Center for Humanitarian Logistics at Georgia Institute of Technology. Her research focuses on applications of operations research and management science with societal impact (particularly health and humanitarian applications), supply chain management, pricing and revenue management, and logistics/transportation. She has worked on projects in several industries including automotive, semiconductor, paper manufacturing, printing, health care, hotels, and airlines. She received the Daniel H. Wagner Prize for Excellence in Operations Research Practice from INFORMS in 1998 and a National Science Foundation CAREER Award in 2001.

Sinan Khan, MPH, MA, is the Public Health Emergency Response Team Coordinator for Los Angeles County Department of Public Health. He completed his master's in public health from the University of Southern California in 2005 and his master's in security studies from the Naval Postgraduate School in 2007. He is currently working on the development of POD and emergency management policies in Los Angeles County.

John Kros is an associate professor of operations management at East Carolina University in Greenville, North Carolina. He teaches courses in operations and supply chain management and spreadsheet modeling. His research focuses on applied statistics, simulation modeling, quality management and control, and supply chain systems.

Elisabeth Kunkel, MD, is a professor, the Director of Consultation-Liaison Psychiatry, the Director of Adult Psychiatric Services, and the Vice Chair for Clinical Affairs in the Department of Psychiatry and Human Behavior at Thomas Jefferson University. She oversees 1,100 psychiatric consultations for hospitalized patients with medical and surgical illnesses per year, and consults on a large number of medically ill outpatients. Her main research interests have been psychoncology as well as cancer prevention and control.

Carisa Kymissis is an attending psychiatrist in psychosomatic medicine at the St. Luke's Hospital Department of Psychiatry. She is a former chief resident of the psychiatric residency program at the Boston University School of Medicine.

Matthew Liberatore, PhD, is the John F. Connelly Chair in Management and Director of the Analytics Strategic Initiative Group in the Villanova School of Business at Villanova University. He has published extensively in operations research, information systems, and project management. His research has been supported by grants funded by the National Science Foundation, National Institutes of Health, the Department of Defense, Aetna US Healthcare, and IBM. His current research focuses on health-care decision making and project management.

Teresa Melo is professor of mathematics and statistics at the Department of Business Administration at the University of Applied Sciences in Saarbrücken, Germany. Prior to joining her current affiliation, she worked for eight years at the Fraunhofer Institute for Industrial Mathematics, where she was responsible for the hospital logistics and supply chain management working groups. She has conducted a number of industrial and publicly funded projects, and has broad experience in the development of optimization models and methods for solving real-world problems from different industries. Her research interests include health-care logistics and facility location in strategic supply chain planning as well as online pickup and delivery problems with time windows. She has a PhD in OR from the Erasmus University Rotterdam, The Netherlands.

Ronald Myers, PhD, currently serves as a professor and Director of Population Science in the Department

of Medical Oncology at Jefferson Medical College, Thomas Jefferson University. He is also the chairman of the board of directors of the Pennsylvania Cancer Control Consortium. He has conducted cancer prevention and control research for over 20 years. His areas of expertise include patient adherence to cancer screening; physician followup of abnormal cancer screening test results; and informed decision making in cancer susceptibility testing, treatment, and clinical trials participation.

Stefan Nickel obtained his PhD in mathematics at the Technical University of Kaiserslautern, Germany, in 1995. He is a full professor at Saarland University and holds the chair of operations research and logistics. He is also member of the scientific advisory board, as well as the management board, of the Fraunhofer Institute for Applied Mathematics in Kaiserslautern, Germany. He has authored or coauthored four books as well as more than 70 scientific articles mainly in the areas of location, supply chain management, and logistics. In addition, he had numerous research contracts with well-known industrial companies (e.g., Lufthansa, Miele, SAP). Moreover, he is editor-in-chief of *Computers & Operations Research*, associate editor of *Operations Research Letters*, and an editorial board member of *Health Care Management Science*.

Robert Nydick, PhD, is a professor in the Management and Operations Department at Villanova University. He has published numerous articles in the decision support and education of management science areas and has participated in grants funded by the National Institutes of Health, the Department of Defense, and Aetna US Healthcare. Most recently his research has focused on the application of the analytic hierarchy process in medical decision-making settings.

Anke Richter, PhD, is an associate professor at the Defense Resources Management Institute at the Naval Postgraduate School. She received her PhD in operations research from Stanford University in 1996, and her graduate work was supported by a grant from the Office of Naval Research. Her research interests include resource allocation for epidemic control, disease modelling, economic impact assessment, bioterrorism and public health preparedness.

Rebecca Roberts earned her MD from the University of Washington and is the Research Division Director

of Emergency Medicine at Cook County Hospital. She has been at Cook County Hospital for nearly 20 years and research director for more than a decade. Her current research interests focus on the economic analysis of medical programs, and she has published extensively, e.g., on the economics of hospital-acquired infections, on the use of observation units, on the cost of care for HIV patients, and on the distribution of fixed and variable costs of hospital care.

Sarah Root is an assistant professor of Industrial Engineering at the University of Arkansas. Her research focuses on applied large-scale optimization, and she is particularly interested in problems arising in logistics and health care.

Pablo Santibáñez is an operations research scientist with the CIHR Team in Operations Research for Improved Cancer Care at the BC Cancer Agency. Previously, he worked for Fraser Health as the lead of the analytical team that supported the Acute Care Capacity Initiative and other strategic planning projects, developing diverse mathematical models. He has a BSc degree in industrial engineering and a master's degree in operation research. In addition to health care, he has several years of experience as an operations research consultant in various sectors, such as mining, forestry, and government.

Jay Simon is a doctoral candidate in The Paul Merage School of Business at the University of California, Irvine. His research is mainly in decision analysis, with a focus on multiattribute preference modeling in both normative and descriptive contexts. One of his primary interests within this area is preference modeling for medical decisions.

Edward A. Wasil is a professor in the Department of Information Technology at the Kogod School of Business at American University. He teaches graduate courses in production and operations management and applied business statistics. Since 1992, he has been the feature article editor of the *INFORMS Journal on Computing*. In 2006, he was named the American University Scholar/Teacher of the Year.

David West is an associate professor of operations management at East Carolina University in Greenville, North Carolina, where he teaches courses in operations and supply chain management and management science. His research interests include the application of

neural network technology to areas such as classification decisions, process control, and group clustering.

Niesha Westmoreland is a psychosomatic medicine fellow at the Montefiore Medical Center. She is a former chief resident of the psychiatric residency program at the Boston University School of Medicine.

Kenneth Yip is an operations research manager with the Hong Kong Hospital Authority, a statutory body

managing all public hospitals and institutes in Hong Kong. Prior to joining the Hong Kong Hospital Authority, he worked for Fraser Health in Vancouver, British Columbia, Canada. As a business engineer, he supported various strategic planning initiatives, in particular, the Acute Care Capacity Initiative. Kenneth has a BSc degree in software engineering and a master's degree in operations research.
