With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

Contributors

Sung-Ho Ahn earned degrees from the U of Pennsylvania and Stanford. At RAND, he has worked in military logistics, Superfund liability cost assessment, and health care.

Bertran Auvert teaches public health in the Paris-Ouest medical school. His background is in mathematics and medicine. He developed Simul-AIDS, a stochastic simulation computer program of the HIV/AIDS epidemic in developing countries.

Robert S. Bernstein has assisted host country counterparts and United Nations agencies in dozens of countries and Africa and Asia to improve disease prevention policies, interventions, and programs. He did the work reported here while he was a US Public Health Service medical epidemiologist on assignment to the US Agency for International Development.

Sally Blower teaches in the Department of Medicine and Microbiology at UC-San Francisco. She earned her PhD in biological science from Stanford. Her research focuses on using mathematical models to design epidemic control strategies.

Margaret L. Brandeau teaches at Stanford. Her research focuses on applying mathematical and economic models to problems in manufacturing and services. Her current work in AIDS policy modeling, funded by the National Institute on Drug Abuse, includes an analysis of mandatory nationwide HIV screening of newborns and analysis of trade-offs between competing AIDS intervention programs.

Jonathan Caulkins teaches OR and public policy at Carnegie Mellon and is on the research staff at RAND's Drug Policy Research Center. He earned degrees at Washington U in St. Louis and MIT. His research focuses on modeling and analyzing drug markets and their response to policy interventions.

Vanda De Angelis graduated in statistics from La Sapienza U in Rome and earned her Libera Docenza in OR. She teaches at La Sapienza U and has spent years in Mozambique lecturing at Eduardo Mondlane U and at the WHO Regional Center for Health Development (CRDS).

Sake de Vlas teaches at Erasmus U, Rotterdam. His scientific background is theoretical biology, and his PhD work concerned statistical modeling for the diagnosis of schistosome infection. He is involved in several studies on modeling for infectious disease control.

John Dunn-Mortimer is a consultant specializing in HIV systems planning for such clients as the Institute for Health Policy Studies at UC-San Francisco and the California State Office of AIDS. He was a lobbyist on HIV issues in Sacramento for eight years.

Donna Edwards is a senior member of the technical staff in the systems research department at Sandia National Laboratories. She applies the techniques of engineering systems analysis to decision problems in health care, national security, and strategic planning.

Lieve Fransen is public health advisor at the European Commission's Directorate General for Development. Before joining the commission's Health/AIDS unit, she directed the AIDS Task Force. Between 1984 and 1987, she was a medical assistant and researcher at the Institute of Tropical Medicine, Antwerp, Belgium.

Kenneth A. Freedberg is an internist and health-services researcher at Boston Medical Center and Boston U School of Public Health. His interest is in clinical AIDS research and linking research to policy.

Dik Habbema teaches medical decision sciences at Erasmus U, Rotterdam. He coordinates the decision-making research program, which focuses on tropical disease control, clinical decision sciences, and evaluation of early detection of disease.

Jim Kahn teaches at the Institute for Health Policy Studies and the Center for AIDS Prevention Studies at the UC-San Francisco. His research is on the cost-effectiveness of HIV prevention and care.

Edward H. Kaplan is professor of MS and professor of medicine at Yale. For his applications of mathematical and statistical modeling to the study of HIV prevention, he was awarded the 1994 Lanchester Prize, the 1992 Franz Edelman Award, and the Lady Davis Visiting Professorship to the Hebrew U of Jerusalem.

Peter Lurie is an HIV-prevention researcher at UC-San Francisco. His interests include needle-exchange programs, pharmacy sales of syringes to drug users, HIV vaccines, and preventing the spread of HIV in developing countries.

Warren Naamara is a medical epidemiologist with extensive experience in prevention and control of sexually transmitted infections in Kenya, Uganda, Zimbabwe, and Rwanda. He directed the AIDS control program in Uganda and is technical advisor on

CONTRIBUTORS

AIDS/STD and family planning for the World Bank-Rwanda Health and Population Project.

Jeckoniah Ndinya-Achola is professor at the Department of Medical Microbiology, U of Nairobi. He headed the WHO Collaborative Centre for STD/AIDS Research from 1983 until 1996. He is a member of the Kenya National AIDS Control Committee and was its chairman from 1989 to 1993.

Douglas Owens is a senior research associate at the VA Palo Alto Health Care System and an assistant professor at Stanford. He applies decision theory to clinical and health policy problems, particularly HIV and cardiovascular diseases.

Thomas O'Connor, a Chicagoan, is interested in seeing contemporary urban society survive. He has studied urban cultural anthropology at Washington U in St. Louis and quantitative analysis of urban problems at the U of Chicago and at RAND Graduate School. He is enrolled in Loyola U Chicago School of Law.

A. David Paltiel teaches cost-effectiveness analysis and policy modeling at the Yale Schools of Medicine and Management. His interest is in issues of resource allocation and decision making in the health sector, with a special focus on AIDS.

Travis Porco, a native of Knoxville, Tennessee, earned his undergraduate degree in physics from the U of Miami, Florida, and his PhD in biophysics and an MPH from the U California-Berkeley.

Carla Rossi, a native of Rome, earned her doctoral degree in math from the U of Rome La Sapienza. She is professor of probability and mathematical statistics at the U of Rome Tor Vergata, and is interested in biomathematics and applications of statistics to social and biological problems.

Giuseppe Schinaia earned his doctorate in statistics and demography from the U of Rome La Sapienza in 1984. He held academic research positions at the Cancer Institute in Rome and the U of Rome Tor Vergata, and is now a technical scientist at the U of Rome La Sapienza, working in biomathematics, genetics, and the theory and applications of simulation models.

Carol Hill Sox is a research assistant professor of community and family medicine at Dartmouth Medical School interested in the factors that influence the provision of preventive care. She earned an engineer's degree at Stanford.

Steven T. Steiz teaches political science and directs the computational modeling laboratory at the U of Illinois-Urbana/Champaign. He developed simulation programs on population dynamics, the behavior

of workers in large organizations, epidemiology, and comparative social risk.

Ross Shachter teaches at Stanford. He spent two years at Duke's Center for Health Policy Research and Education. His research on decision analysis representations, medical decision analysis, and systems for reasoning under uncertainty is incorporated into various intelligent systems and into a methodology for medical technology assessment widely used for adoption and reimbursement policy decisions.

David C. Sokal was a Vista volunteer on the Crow Indian Reservation in Montana and a newspaper reporter at the *Lockport Union Sun & Journal* in upstate New York before attending medical school. His public health career took him to Burkina Faso, West Africa, where he lived for about five years.

John Stover is a vice president at the Futures Group International. He is a policy analyst specializing in policy dialogue, policy reform, research, and strategic planning in the health and population sector. He places particular emphasis on communicating findings to policy makers and working with them to build consensus for effective action.

Gerrit van Oortmarssen is a senior scientist at the Department of Public Health of Erasmus U, Rotterdam. He cooperates in cost-effectiveness studies for breast-cancer screening, colorectal-cancer screening, and cervical-cancer screening, and also participates in evaluation projects for control of onchocerciasis, lymphatic filariasis, leprosy, schistosomiasis, and sexually transmitted infections.

Kitty Van der Ploeg is a scientific staff member at the Department of Public Health, Erasmus U, Rotterdam, interested in developing epidemiological simulation models for evaluating disease control activities. She helped to develop and apply STDSIM to Nairobi.

Carina van Vliet is a scientific staff member at the Department of Public Health, Erasmus U, Rotterdam. She helped to develop STDSIM and is responsible for its methodological aspects and implementation. In 1993 and 1994, she worked on health economic models at the National Institute of Public Health and Environmental Protection.
