---

**B. W. Baetz** is professor and chair in the Department of Civil Engineering at McMaster U and earned his PhD in environmental engineering from Duke U. His research interests include solid-waste management and planning and the design of sustainable communities.

**Robert F. Dell** is an associate professor of operations research at the Naval Postgraduate School. Applications motivate his research in optimization.

**Jorge A. Duran** is a professor in the School of Business at the U of the Americas in Puebla, Mexico. He received his doctorate in regional and urban studies at the U of Birmingham (UK). He was a member of the International Motor Vehicle Program coordinated by MIT. He is also a member of the editorial committee of "The International Federation of Operational Research Societies."

**A. M. El-Geriani** is general manager of operations, Great Man-made River Authority in Benghazi, Libya. He has had a number of high positions in the Libyan government, including serving as the Libyan ambassador to Germany.

**O. Essamin** is chief of the research and development section of the Great Man-made River Authority in Benghazi, Libya. He is an engineer and has been consulting for a number of private and public organizations in Libya. He received part of his graduate training in engineering in the United Kingdom.

**Benito E. Flores** is a professor of operations management at the Lowry Mays School of Business at Texas A&M. He has worked in industry in strategic management, and his research interests are in forecasting, quality, strategy, and international management.

**G. H. Huang** is an associate professor at the U of Regina and holds a PhD in environmental engineering from McMaster U. His interests include simulation and optimization modeling of environmental systems, environmental impact and risk assessment, pollution-abatement process control, and pollution control engineering.

**W. J. Hurley** is a professor in the Department of Business Administration at the Royal Military College of Canada. His research interests are transportation modeling, financial modeling, game theory, and decision theory.

**D. P. Loucks** teaches and conducts research in environmental systems engineering at the School of Civil

Engineering of Cornell U. While conducting workshops in Benghazi, Libya, on the use of the models developed for the Great Man-made River Authority, he was honored to be designated a visiting member of the Benghazi Squash Club. However, he was no match for the better players of that club.

**G. G. Patry** is academic vice-rector at the U of Ottawa and holds a PhD in civil engineering from UC-Davis. His interests include dynamic modeling of wastewater-treatment processes, analysis of uncertainty in water-quality models, and expert systems and object-oriented programming.
