With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes.

Contributors

Robert F. Allan is a senior logistics engineer with IBM's personal systems group (PSG). He is the US Advanced Fulfillment Initiative project manager. He is working on a PhD at North Carolina State U.

Ken Ambs is a manager at AT&T Network Services in Bedminster, New Jersey. He joined AT&T in 1990 as a network manager in AT&T's network operations center. He graduated with honors from Drexel U.

James W. Angelo graduated cum laude from the US Naval Academy in 1972 and advanced in the submarine service until his retirement in 1993. He has since served in senior management at Pantex.

Nader Azarmi manages BT's Intelligent Systems R&D program. He joined BT in 1989 after 10 years of research and teaching at universities and is interested in computer science, intelligent systems, doing research and solving real-world problems.

Sugato Bagchi is on IBM's research staff and is interested in knowledge-representation frameworks for business-strategy formulation and analysis. He has worked on a business-process modeling and simulation tool and on specializing this tool for multi-enterprise supply chains.

Stephen J. Buckley manages IBM's supply-chain-analysis department. He earned degrees from Florida State U, Penn State, and MIT, all in computer science. He has developed software for robotic tasks, electronics assembly, production scheduling, and simulation.

Sebastian Cwilich is a technical staff member in the network design and performance analysis department of AT&T Labs. Since joining AT&T Labs in 1997, he has worked on projects in simulation, network design, and performance analysis of large distributed systems.

Roy Cremmery is materials and MIS manager at Spicer. He earned a commercial engineering degree at KU Leuven. He is a member of the international club of West Flanders, DeHanze, and has been nominated Fellow van het Hogenheuvelcollege by the OM Department at KU Leuven.

Mei (May) Deng, a technical manager, joined AT&T Bell Laboratories in 1995 and the new AT&T Labs in 1996. She has worked on Internet services, traffic characterization, and network design and is now working on voice-over IP. Her degrees are from

Tsinghua U, Beijing, and Harvard U.

Nicolas De Schuyter has worked for Spicer since 1973 and is director of operations and managing director. He is also director of the chamber of commerce of West Flanders and the international club of West Flanders, DeHanze.

Markus Ettl works in IBM's extended enterprise systems department. He has conducted supply-chain-analysis projects with IBM divisions and external clients. He received IBM research division awards in 1996 and 1998. He earned his doctorate in computer science from the U of Erlangen-Nuremberg, Germany.

Gordon Gould is the chief actuary of Towers Perrin. He lives in Denver, Colorado and is active in applying the asset and liability modeling system to Towers Perrin clients.

Ron Holcomb is Monroe Plant strategy program manager at Visteon's chassis systems division. He managed axle assembly at the Sterling plant, designed the Romeo engine plant, and was founding director of the Ford production-system institute.

Terry Holeman earned an associates degree in computer information systems from Amarillo College and a BBA in finance from West Texas A&M U. At the Pantex Plant, he has planned technician requirements and been in charge of facility allocations and long-range facility planning.

Rich Hopson earned a BS in math from Panhandle State U in Goodwell, Oklahoma. He graduated as a distinguished military graduate and served in the US Army until retiring as a lieutenant colonel. Since then he has worked at Pantex, managing production planning and scheduling for manufacturing and is now a special projects manager.

David Houck is technical manager of the performance modeling and data network design group at Lucent Technologies. For 20 years at Bell Labs and AT&T Labs he worked on network design, performance modeling, LP algorithms, and traffic management for multiservice data networks.

John Hudson has 22 years experience in manufacturing, the last 15 at the Pantex Plant. He is manager of production planning and project manager of the enterprise modeling project. He has received several "Awards of Excellence" from Mason and Hanger and

the Department of Energy.

Dean Jones earned his BS and MS degrees in applied math from the U of New Mexico. An offer from a DOE consulting firm sidetracked his PhD program. He is a senior member of the technical staff at Sandia responsible for several large modeling efforts.

Kerry Kim is a manager in IBM's Personal Systems Group's worldwide sales, service, and support organization. He received degrees from Claremont McKenna College, Stanford U, and Northwestern U's Kellogg Graduate School of Management.

Ed Kjeldgaard joined Sandia as a research chemist, becoming manager of explosive component development. Since 1992, he has led an advanced production and transportation systems modeling team. He received the DOE Award of Excellence and Sandia's Meritorious Achievement Award.

Lisa Koenig directs supply-chain reengineering for the IBM Personal Systems Group. She joined IBM in 1984 and has held engineering and materials-management positions in the Networking Systems Division, the Personal Computer Company, and the Personal Systems Group (PSG).

Marc Lambrecht holds the Tractebel chair and teaches manufacturing systems analysis and inventory management at KU Leuven. He and his wife have two grown sons, Bart and Jan, and he is very interested in arts and archaeology.

David Lesaint was born in the Loire Valley, France, in 1967. He moved to Toulouse for his university education and then to the UK to join BT Labs. He and his family live in Paris.

Grace Y. Lin at the IBM Thomas J. Watson Research Center manages the Extended-Enterprise Supply-Chain Management Research Group. She led the development of the Asset Management Tool (AMT) and a number of supply chain modeling and analysis projects. She earned her PhD in IE from Purdue U.

George List chairs the civil engineering department at Rensselaer and directs the Center for Infrastructure and Transportation Studies. His research focuses on network analysis and planning, and real-time operations management.

Dave Lynch is a principal technical staff member at AT&T Labs, working on network-design. He holds degrees from Susquehanna U and Cornell. He and his family live in Freehold, New Jersey.

Clive Morgan is a principle and has been responsible for the global practice at Towers Perrin. He worked with international clients, such as Unilever, in implementing the global version of the investment system. He is retired but continues to consult.

Charles Muir is the manager of engineering and facilities at the Visteon Sterling plant. He has worked at Ford/Visteon for 32 years in axle-product engineering, the Fairfax and Livonia transmission plants, the Transmission and Chassis Division, and the advanced manufacturing development center.

John M. Mulvey is professor of OR and financial engineering at Princeton U. He has developed asset and liability management systems for many financial companies and government agencies, including American Express, Pacific Mutual, and the US Department of the Treasury (Office of Tax Analysis).

Bret L. Naccarato, a senior analyst for the IBM Printing Systems Company, has over 19 years of managerial and technical experience. A karate student, he holds a second degree black belt from the North American Kyokushinkai Association.

George Pfeil has 30 years of automotive experience at Ford Motor Company. He last served as plant manager of the Sterling Axle plant. He also led the Ford team that designed, built, and launched the Ford Romeo engine plant.

Shahram Taj teaches production and operations management, simulation, and OR/MS at the U of Detroit, Mercy. He has consulted on over 50 projects at Ford and Visteon manufacturing plants. His research concerns factory design and lean manufacturing.

Mark Turnquist earned his degrees from Michigan State and MIT. He specializes in large-scale network optimization models for use in transportation, logistics, and manufacturing. He has received a number of awards for teaching and for research.

Nico Vandaele teaches manufacturing systems analysis, project management, and OR at UFSIA and focuses on systems performance analysis in his research. He is interested in history and suffers from a collector's disease (literature, stamps, artifacts).

Christos Voudouris was born in Thessaloniki, Greece in 1969, grew up in Alistrati, in northern Greece, and moved to Athens for his university education. He and his wife, Stella, have lived in East Anglia, UK, for seven years.

Dicky Yan, a manager at AT&T Network Services in Bedminster, New Jersey, earned degrees at Yale, Imperial College, and City U, London. He has published on game theory, industrial cases, network optimization, and algorithms for data management.

David D. Yao teaches IE and OR at Columbia U. He is an IEEE fellow, a Guggenheim fellow, and a recipient of the Presidential Young Investigator Award and several awards from IBM Research. He has done extensive research and consulting work.
