With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes.

Contributors

Downloaded from informs.org by [216.73.216.105] on 13 July 2026, at 16:11 . For personal use only, all rights reserved.

Samuel E. Bodily is the John Tyler Professor of Business Administration at the Darden School, U of Virginia. His research concerns decision and risk analysis and applications of MS. He has published widely and has consulted with a variety of organizations.

Gerald Brown is professor of OR at the Naval Postgraduate School. Applications in the public and private sectors motivate his research in optimization.

Robert L. Carraway teaches at the Darden School at the U of Virginia. His research and teaching interests are applied MS (particularly math programming) and decision analysis. He has international experience teaching and consulting in Latin America, Europe, and Asia.

Dana R. Clyman teaches and conducts research in negotiations and decision analysis, and at the confluence of e-business, e-finance, and e-markets. He holds a PhD in decision analysis and finance, and three master's degrees: in mathematics, engineering science, and business administration, all from top-notch universities.

Sherwood C. Frey, Jr., is the Ethyl Corporation Professor of Business Administration at the Darden School, U of Virginia. He teaches, writes, and consults in the areas of risk management and negotiations for domestic and international organizations.

Srinagesh Gavirneni is a software architect at Maxager Technology. Previously he was a research scientist in the Austin Product Center of Schlumberger. He earned degrees from IIT-Madras and Carnegie Mellon. His research interests are in supply-chain management, inventory control, scheduling, mathematical programming, and simulation.

Ronald A. Howard teaches at Stanford and directs the Decisions and Ethics Center. Current research interests are improving the quality of decisions, life-and-death decision making, and the creation of a coercion-free society. In 1986, ORSA awarded him the Frank P. Ramsey Medal for distinguished contributions in decision analysis. In 1998, INFORMS gave him its first award for the Teaching of OR/MS Practice. He has had a lifelong interest in on- and off-road motorcycling and in sailing; he sails in San Francisco Bay and in sailing areas around the world.

Elena Katok teaches management information systems at Penn State. She holds degrees from Penn State and the U of California, Berkeley. Her interests include using optimization for applications in manufacturing and e-commerce. She has done consulting work for Jeppesen Sanderson, Konica Imaging, Coors Brewing, and the US Army.

Joseph Keegan is senior manager for capacity planning at the Kellogg Company. He earned BS degrees in industrial engineering and business administration from the U of Wisconsin-Platteville. He has been employed by the Kellogg Company for over 15 years, the last five in various planning roles.

Andrew Lathrop is a consultant with Accenture in its capability modeling and simulation group. He holds degrees from the Colorado School of Mines and the US Military Academy. Recent clients include the Defense Logistics Agency, The Securities Industry Association, and Samsung Semiconductor.

Irvin J. Lustig is the optimization evangelist at ILOG, delivering messages to the marketplace about ILOG's optimization products. Previously he was a developer of ILOG CPLEX and a faculty member at Princeton. Since 1997, he has concentrated on explaining constraint programming to OR professionals.

Douglas Morrice teaches at the U of Texas, Austin. He earned degrees from Carleton and Cornell. He has extensive experience in MS and supply-chain management. For the last five years, he has analyzed and improved Schlumberger's operations and logistics using optimization and simulation techniques.

Frederic H. Murphy teaches ORMS in the Fox School of Business and Management at Temple University. He has a BA in mathematics (1968) and a PhD (1971) in OR from Yale. He is a past editor of *Interfaces* and the current editor of the OR chronicle and practice areas of *Operations Research.* His interests lie in energy-market modeling and policy and regional technology-development policy.

Sunju Park teaches MSIS at Rutgers U. She earned her degrees at Seoul National U and the U of Michigan. Her primary research interest is agent-based systems and their applications to real-world problems, such as electronic commerce, digital libraries, and auctions.

Phillip E. Pfeifer teaches quantitative analysis and interactive marketing at the Darden School, U of Virginia. His research interests include space-time modeling, yield management, and the modeling of customer relationships.

Jean-François Puget is vice president of optimization R and D at ILOG. He was the principal developer of ILOG Solver. His main research interests are in the cooperation between math programming and constraint programming techniques and the develop-

ment of easier-to-use optimization software.
Michael H. Rothkopf teaches MSIS at Rutgers U. He earned his degrees at Pomona College and MIT. He is a past editor of *Interfaces*. He has been writing about auctions since he stumbled into an auction problem while working for Shell in the mid-1960s.
William Tarantino is an OR analyst at the Center for Army Analysis. He earned degrees from the Naval Postgraduate School and the Colorado School of Mines. He worked for Jeppesen while working on his dissertation. He is studying the optimal stationing of army forces and army deployment options.
Brian Vigus is supply chain business analyst (cereal) for the Kellogg Company. He earned the BA Sc degree in industrial engineering from the U of Toronto. He has worked at the Kellogg Company for over 20 years in production planning and inventory control.
Kevin Wood is professor of OR at the Naval Postgraduate School. He earned his PhD from the U of California, Berkeley, working on network reliability but is currently solving linear, integer, and stochastic programming problems.
Susan H. Xu teaches MS and information systems at Penn State. She earned degrees in OR and statistics from Rensselaer Polytechnic Institute. Her research concerns modeling, design, performance evaluation, and optimal control of stochastic systems.

Erratum

This erratum is published to clarify an inaccurate association made of Paul Keys and the University of Oxford (Miser, Hugh J. 2001, "The easy chair: Is OR/MS a profession?" *Interfaces*, Vol. 31, No. 4, pp. 17–21). Paul Keys has not and currently does not have any professional association with the University of Oxford. He is a member of the Business School at the University of Hull, UK, where he has been based since 1980.
