With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

Contributors

John Board is reader in accounting and finance at the London School of Economics. His non-OR research interests are in accounting policy and the structure and regulation of financial markets. He has been a consultant for the Financial Services Authority and an advisor to the UK Treasury Committee on financial market reform.

Brian Denton is an engineer with IBM's microelectronics division. He holds a PhD in operations management from McMaster U. His interests are applying linear programming and combinatorial optimization to supply-chain optimization problems in semiconductor manufacturing and data-storage-device manufacturing.

Diwakar Gupta teaches in the graduate program in industrial engineering at the U of Minnesota. His research concerns manufacturing strategy, supply-chain management, and operational analysis of health-care-delivery systems. Prior to joining the U of Minnesota, he taught MS at McMaster U.

Keith Jawahir is a professional engineer with over 20 years of OR experience in the steel industry. He earned a PhD at the U of Toronto. His research focuses on applying mathematical and metaheuristic approaches to solve complex supply-chain optimization problems.

Maureen Meadows joined the OR and Systems Group at Warwick Business School in 1993. She was previously with National Westminster Bank, initially as an operational researcher and later as a marketing manager. Her research interests include market segmentation, process improvement, and strategy development.

John Mingers teaches at Warwick Business School. He earned degrees in MS and in Systems in Management at Lancaster U with Peter Checkland. Between degrees he worked as a systems analyst and as an OR analyst. His research interests include using systems methodologies in problem situations, particularly multimethodology; developing the critical systems approach and critical thinking in education; and the nature of information and meaning. He edited *Multimethodology* (with Tony Gill) and *Information Systems: An Emerging Discipline?* (with Frank Stowell).

Frances A. O'Brien earned a master's in OR from Southampton U and worked at Ford Motor Company as an OR analyst. In 1990, she joined Warwick Business School. She teaches undergraduate and postgraduate business modeling courses, scenario planning, and visioning. Her research interests vary from the methodological development of scenarios and visions to the use of heuristic algorithms for forming student groups. When not teaching and researching, she spends most of her time dancing to music from the 1930s to the 1950s.

Simon J. Pak teaches finance at Penn State–Great Valley. He earned his PhD in economics at UC–Berkeley and taught at NYU and Florida International U. He has consulted for the IRS, the US Department of Justice, and the US Congress, Office of Technology Assessment. He has conducted research for the World Bank. He has published on financial markets and monetary economics. He is a principal investigator on a \$2 million research project funded by the US Department of Treasury.

Stewart Robinson studied OR/MS in the early 1980s and has worked in the field ever since as a practitioner and as an academic. He has a keen interest in computer simulation, particularly in its practical application. He teaches at Warwick Business School and is academic director of the executive MBA program. Outside of work much of his time is devoted to his family, to the local church, and to running marathons.

Estelle A. Shale earned degrees in applied mathematics, MS, and OR and is currently a lecturer at Warwick Business School. Her research interests include performance evaluation and data envelopment analysis. Her life more generally has multiple, incommensurate inputs and outputs, including three sons, walking up and down hills, and music more than 500 years old.

Kut C. So earned his PhD from Stanford and has served as a faculty member at UC–Irvine since 1990. He has consulted for such companies as Nestle and OOCL. He enjoys traveling and good food.

Stephanie Stray is a senior lecturer in the OR and Systems Group at Warwick Business School. She earned degrees at the Universities of York and Essex and previously worked (among other places) at Aston Business School and Bradford Management Centre. She teaches quantitative methods to undergraduate, master's, and doctoral students. Her research interests include corporate environmental reporting and disclosure, and the use of quantitative techniques in management education.

Charles Sutcliffe is professor of finance and accounting at the U of Southampton, has published widely, and written seven books. He has been a consultant to the Financial Services Authority, the UK Treasury, the United Nations, the London Stock Exchange, and LIFFE, and is a director of USS Ltd., which manages a £20 billion pension fund.

Jayashankar M. Swaminathan is Benjamin Cone Research Professor and chair of the operations technology and innovation management area at the Kenan-Flagler Business School at the U of North Carolina at Chapel Hill. His research interests are supply-chain management, managing product variety, and electronic commerce. He earned doctoral and master's degrees in industrial administration at Carnegie Mellon. He earned his bachelor's degree in computer science and engineering from the Indian Institute of Technology, Delhi.

Christopher Tang earned his PhD from Yale and has served as a faculty member at UCLA since 1985. He has consulted for such companies as IBM and HP. He enjoys traveling and meeting interesting people.

Stelios H. Zanakis teaches decision science and information systems at Florida International U. He was the founding chairman of this department and recipient of several university teaching and research awards. His research concerns multicriteria decision aids, knowledge discovery in databases, and statistical applications and auditing. He has published many articles and recently coedited *Decision Making: Recent Developments and Worldwide Applications* (Kluwer

2000). He has conducted many executive and management training seminars and consulted for the City of Miami, Ryder, Union Carbide, the West Virginia Department of Highways, the Charleston Area Medical Center, Key Pharmaceutical, the Hemispheric Center for Environmental Technology, and the US Academy for Educational Development. He earned his PhD in MS, MS in statistics, and MBA at Penn State.

Robert Zavala earned his MBA from UCLA and has worked in the check-operations department at Federal Reserve Bank for over 10 years. He enjoys home remodeling and gardening.

John S. Zdanowicz teaches finance at Florida International U. He was chairman of the department of finance at FIU and of the department of finance and economics at Rochester Institute of Technology. He earned his PhD in finance from Michigan State U. He has consulted for the US Department of Justice, the Technical Ad-

visory Service for Attorneys, and the US Congress, Office of Technology Assessment. He was an instructor at the Financial Fraud Institute of the Federal Law Enforcement Training Center, US Department of Treasury. His research interests include real estate financing, bank location analysis, international price discrimination, and capital market efficiency. He is also a principal coinvestigator on the \$2 million award from the US Department of Treasury to study money laundering and transfer pricing.

William T. Ziemba is the Alumni Professor of Financial Modelling and Stochastic Optimization in the Faculty of Commerce and Business Administration of the U of British Columbia. He is a former departmental editor for finance of *Management Science* and is the series editor for North Holland's Handbook in Finance series. His latest books are *The Stochastic Programming Approach to Asset Liability and Wealth Management* and *Applied Stochastic Programming*.
