With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

## About Our Authors

**Andrew Burton-Jones** (“Conceptualizing Systems for Understanding: An Empirical Test of Decomposition Principals in Object-Oriented Analysis”) is an assistant professor in the Sauder School of Business, University of British Columbia. He holds a B. Comm. and MIS from the University of Queensland and a Ph.D. from Georgia State University. He has two research streams. The first seeks a deeper understanding of the meaning and consequences of system usage. The second seeks to improve methods used in systems analysis and design. He has published in numerous journals and conferences.

**Paul Clay** (“Understanding Conceptual Schemas: Exploring the Role of Application and IS Domain Knowledge”) is a Ph.D. student in the Information Systems Department of the Kelley School of Business, Indiana University. He holds an MS in economics from the University of Utah and a BA in business-economics from Fort Lewis College. Prior to joining the Kelley School of Business he worked in data administration and networking in the financial services industry. His research interests include knowledge management, structuration, and the fit among business processes, technology, and individual workers.

**Tamara Dinev** (“An Extended Privacy Calculus Model for E-Commerce Transactions”) is Assistant Professor at the Department of Information Technology and Operations Management at Florida Atlantic University. Her research interests include information privacy, negative Internet technologies, and cross-cultural research in information technology adoption and management. She has published in journals such as the *European Journal of Information Systems*, *International Journal of Electronic Commerce*, and *Communications of the ACM*.

**Dennis F. Galletta** (“When the Wait Isn’t So Bad: The Interacting Effects of Website Delay, Familiarity, and Breadth”) is AIS Fellow and Professor of Business Administration at the University of Pittsburgh. He obtained his Ph.D. from the University of Minnesota in 1985. His articles have appeared in journals such as *Management Science*, *Information Systems Research*, *Decision Sciences*, the *Communications of the ACM*, the *Journal of MIS*, and others. He has served on several editorial boards

and in many capacities for ICIS and AIS. Most recently, he was ICIS 2005 program cochair.

**Anindya Ghose** (“Internet Exchange for Used Books: An Empirical Analysis of Product Cannibalization and Welfare Impact”) is an assistant professor of information systems at the Leonard Stern School of Business, New York University. He received his Ph.D. in information systems from GSIA, Carnegie Mellon University in 2004. His current research examines economic issues in information security, pricing and product line strategies in software markets, institutional issues and reputation dimensions in electronic used good markets, and IT-based personalized pricing. His research has appeared in *Management Science*, *ISR*, and *JMIS*.

**Paul Hart** (“An Extended Privacy Calculus Model for E-Commerce Transactions”) is Associate Professor and Chair of the Department of Information Technology and Operations Management at Florida Atlantic University. His research interests include information privacy, trust in online transactions, the role of computer networks in interorganizational relationships, work practices in engineering design environments, and website design and impression management. He has published in journals such as *Organization Science* and the *Journal of Management Information Systems*.

**Raymond M. Henry** (“When the Wait Isn’t So Bad: The Interacting Effects of Website Delay, Familiarity, and Breadth”) is an assistant professor in the Department of Management at Clemson University. He earned his Ph.D. in information systems from the University of Pittsburgh. His current research focuses on IT governance, systems development, project management, and the use and development of information sources. His work has appeared or is forthcoming in research outlets including *Information Systems Research*, the *Journal of the AIS*, and the *Communications of the ACM*, as well as national and international conferences.

**Vijay Khatri** (“Understanding Conceptual Schemas: Exploring the Role of Application and IS Domain Knowledge”) is an assistant professor of information systems in the Kelley School of Business at Indiana University. He received his Ph.D. in management information sys-

tems from the University of Arizona. His research interests center on developing techniques to facilitate elicitation of spatial/temporal database requirements and understanding the cognitive aspects that influence analysis and design of information systems. His work has been published or is forthcoming in *Information Systems*, *IEEE Transactions on Knowledge and Data Engineering*, *IEEE Transactions on Professional Communication*, *IEEE Transactions on Education*, and *Annals of Mathematics and Artificial Intelligence*, among others. He is a member of IEEE, the Association of Information Systems (AIS), ACM and INFORMS.

**Scott McCoy** ("When the Wait Isn't So Bad: The Interacting Effects of Website Delay, Familiarity, and Breadth") is an assistant professor in The Mason School of Business at the College of William and Mary. He earned his Ph.D. from the University of Pittsburgh. His research addresses cross-cultural impacts and human-computer interaction, and has been presented or published in several national and international conferences and journals such as the *Communications of the ACM*, *Information Technology and People*, *International Journal of Cross Cultural Management*, *Journal of the AIS*, and *Communications of the AIS*.

**Peter Meso** ("Conceptualizing Systems for Understanding: An Empirical Test of Decomposition Principles in Object-Oriented Analysis") is an assistant professor of information systems at Georgia State University. His current research deals with the requirements and software engineering, the processes of systems development and implementation, consequences of information systems in underdeveloped nations, and emergent business information systems and practices. He earned his Ph.D. in information systems from Kent State University, and holds a BS (in information systems) and an MBA from the United States International University–Africa. His published works have appeared in various journals, books, and conferences.

**Sung-Jin Park** ("Understanding Conceptual Schemas: Exploring the Role of Application and IS Domain Knowledge") is a former Ph.D. student in the School of Public and Environmental Affairs, Indiana University. He holds an MS and BA in public administration from Yonsei University, Korea. His research interests include e-government, the impact of financial information system implementation in budgetary politics, and budgetary and financial management reform in the public sector.

**Peter Polak** ("When the Wait Isn't So Bad: The Interacting Effects of Website Delay, Familiarity, and Breadth") is an assistant professor of computer information systems in the School of Business Administration at the University of Miami. He earned his Ph.D. in information systems from the University of Pittsburgh with a major in MIS and a minor in telecommunications. His research interests are in the areas of human-computer interaction, Internet technologies, electronic commerce, electronic auctions, and telecommunications.

**V. Ramesh** ("Understanding Conceptual Schemas: Exploring the Role of Application and IS Domain Knowledge") is an associate professor in the Information Systems Department and the Ford Motor Company Teaching Fellow at Indiana University's Kelley School of Business. He is the director of the MS in information systems program. He received his Ph.D. in management information systems from the University of Arizona. His research interests are in Data Modeling, Heterogeneous Databases, Virtual Teams and Groupware, Usability, and Software Engineering. His research has appeared in leading journals, such as *MIS Quarterly*, *ACM Transactions on Information Systems*, the *Communications of the ACM*, the *Journal of Management Information Systems*, *Information Systems*, *IEEE Expert*, among others. He is Vice Chair of INFORMS Information Systems Society and Vice President of the AIS Special Interest Group on Systems Analysis and Design.

**Michael D. Smith** ("Internet Exchange for Used Books: An Empirical Analysis of Product Cannibalization and Welfare Impact") is an assistant professor of information systems at the H. John Heinz III School of Public Policy and Management, Carnegie Mellon University. He received his Ph.D. in management science from MIT's Sloan School of Management in 2000. His research analyzes structure and competition in electronic markets and the design of efficient electronic markets for physical and digital goods. He recently received an NSF CAREER Development award for his work in this area.

**Rahul Telang** ("Internet Exchange for Used Books: An Empirical Analysis of Product Cannibalization and Welfare Impact") is assistant professor of IS at the Heinz School of Public Policy and Management, Carnegie Mellon University. He received his Ph.D. from the Tepper School of Business, CMU, in 2002. His research interests include the economics of information security, software vendors' incentives to provide quality, online market structures, and empirical models of the impact of new technologies like P2P networks. His research has

appeared in *Management Science*, the *Journal of Marketing Research*, and *JMIS*.

**Iris Vessey** ("Understanding Conceptual Schemas: Exploring the Role of Application and IS Domain Knowledge") is Honorary Professor at the University of Queensland and Adjunct Professor at the Queensland University of Technology. She received her M.Sc., MBA, and Ph.D. in management information systems from the University of Queensland. Her research interests focus on the evaluation of emerging information technologies, knowledge management systems, and the management

and organization of enterprise resource planning systems (ERPs). She serves, or has served, as an associate editor for *Information Systems Research*, the *Journal of Database Management*, the *Journal of Management Information Systems*, *MIS Quarterly*, and *Management Science*, and she serves on the Executive Board of *Information Systems Frontiers*. During the first eight years of its life, she served as Secretary of the Association for Information Systems, as well as of the International Conference on Information Systems following its merger with AIS. She is an inaugural AIS Fellow of the AIS.
