With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

About Our Authors

Ritu Agarwal (“A Control Theory Perspective on Agile Methodology Use and Changing User Requirements”) is Professor and Robert H. Smith Dean’s Chair of Information Systems at the Smith School of Business, University of Maryland. She is also the Director of the Center for Health Information and Decision Systems and serves as a Senior Editor for *Information Systems Research* and an Associate Editor for *Management Science*. Her current research is focused on the use of IT in health-care settings, technology-enabled transformations in electronic markets, and the processes through which organizations derive business value from information technology.

Robert D. Austin (“Research Commentary: Weighing the Benefits and Costs of Flexibility in Making Software: *Toward a Contingency Theory of the Determinants of Development Process Design*”) is Professor, Managing Creativity and Innovation, at Copenhagen Business School and Associate Professor of Technology and Operations Management at Harvard Business School. His research focuses on innovation, IT management, and performance management. He has published on these subjects in numerous papers, articles, and cases, and in several books, including, most recently, *The Adventures of an IT Leader* (Harvard Business Press). He chairs the Harvard Business School executive program for Chief Information Officers.

Rosann Webb Collins (“Control of Flexible Software Development Under Uncertainty”) is Associate Professor of Information Systems and Decision Sciences at the University of South Florida. Her current research focuses on global information systems, systems development, the impact of information technologies on work, and behavioral issues in information markets. She has consulted with numerous businesses, community organizations, libraries, and educational organizations on information technology use and issues.

Kieran Conboy (“Agility from First Principles: Reconstructing the Concept of Agility in Information Systems Development”) is a lecturer in information systems at the National University of Ireland, Galway. His research focuses on agile systems development approaches, as well as on agility across other disciplines. Kieran is currently involved in numerous national and international projects in this area and has worked with many companies on their agile initiatives, including Intel, Microsoft, Accenture, HP, and Fidelity Investments. Kieran has chaired related conferences, including the European Conference in Information Systems (Galway, 2008) and the XP and Agile Development Conference (Limerick, 2008), and he has also had chairing roles at XP2009 and XP2010. Some of his research has been published in various leading journals and conferences, such as *Information Systems Research*, *the European Journal of Information Systems*, *the International Conference in Information Systems (ICIS)*, *the European Conference in Information Systems (ECIS)*, *IFIP 8.6*, and *the XP200n Conference* series. He is also associate editor of the *European Journal of Information Systems*. Before joining NUI Galway, Kieran was a management consultant with Accenture, where he worked on a variety of projects across Europe and the United States. Kieran can be reached at kieran.conboy@nui-galway.ie.

Jonathon N. Cummings (“Crossing Spatial and Temporal Boundaries in Globally Distributed Projects: A Relational Model of Coordination Delay”) is an Associate Professor of Management at the Fuqua School of Business, Duke University. He spent three years at the MIT Sloan School of Management as an Assistant Professor after completing his dissertation and did post-doc work at Carnegie Mellon University. His current research focuses on social networks and teams in organizations, as well as the role of knowledge sharing in work distributed across different geographic locations.

Lee Devin (“Research Commentary—Weighing the Benefits and Costs of Flexibility in Making Software: *Toward a Contingency Theory of the Determinants of Development Process Design*”) received his Ph.D. from Indiana University in 1967 and taught theatre at IU, the University of Virginia, Vassar College, and Swarthmore College. He is currently a Senior Research Scholar at Swarthmore and a dramaturg at People’s Light and Theatre. He’s done most of the jobs of play making, except costume design. He joined Actors’ Equity in 1975. His favorite roles include Malvolio (*Twelfth Night*), Benedick (*Much Ado About Nothing*), Piet (*A Lesson from Aloes*), and Mitch (*A Streetcar Named Desire*).

J. Alberto Espinosa (“Crossing Spatial and Temporal Boundaries in Globally Distributed Projects: A Relational Model of Coordination Delay”) is an Associate Professor of Information Technology and UPS Scholar at the Kogod School of Business at American University in Washington, DC. He received his Ph.D. in Information Systems from the Tepper School of Business at Carnegie Mellon University. His current research focus is on global software and technical teams, team knowledge, team coordination, and spatial and temporal boundaries.

Michael L. Harris (“Control of Flexible Software Development Under Uncertainty”) is an Assistant Professor of Business Administration at Indiana University–Southeast. His current research interests include managing and adapting to change, innovation, organization learning, product-orientated software development, strategic alignment of information technology, knowledge management, and entrepreneurship. He has a Ph.D. from the University of South Florida. He has more than 20 years of industry experience in management and executive management at technology and software companies, including both Fortune 500 organizations and startup companies.

Alan R. Hevner (“Control of Flexible Software Development Under Uncertainty”) is an Eminent Scholar and Professor in Information Systems and Decision Sciences in the College of Business at the University of South Florida. He holds the Citigroup/Hidden River Chair of Distributed Technology. Dr. Hevner’s areas of research interest include

information systems development, software engineering, health-care information systems, and service-oriented computing. Dr. Hevner has a Ph.D. in Computer Science from Purdue University. He is a member of ACM, IEEE, AIS, and INFORMS.

Likoebe M. Maruping (“A Control Theory Perspective on Agile Methodology Use and Changing User Requirements”) is an assistant professor of Information Systems in the Walton College of Business at the University of Arkansas. Likoebe’s research is primarily focused on the activities through which software development teams improve software project outcomes. His current work in this area focuses on understanding how teams cope with uncertainty in software development projects. He also enjoys conducting research on virtual teams and the implementation of new technologies in organizations. His research has been published or is forthcoming in premier information systems, organizational behavior, and psychology journals, including *MIS Quarterly*, *Information Systems Research*, *Organization Science*, *Journal of Applied Psychology*, and *Organizational Behavior and Human Decision Processes*.

Cynthia K. Pickering (“Crossing Spatial and Temporal Boundaries in Globally Distributed Projects: A Relational Model of Coordination Delay”) is an Intel Principal Engineer with the IT Innovation and Research group. She is Director of the IT Collaboration Research Lab, called Collaboratory, based in Chandler, Arizona. The Collaboratory has a primary focus on global team collaboration: comprehending people, process, and technology interdependencies. Her current research combines needs assessment, new concept development, emerging usage models definition, and enabling architecture and technologies exploration.

Saonee Sarker (“Exploring Agility in Distributed Information Systems Development Teams: An Interpretive Study in an Offshoring Context”) is currently an Associate Professor in the Department of Information Systems at Washington State University. Her research focuses on globally distributed software development teams and other types of computer-mediated groups, technology adoption by groups,

and information technology capability of global organizations, and it has appeared in outlets such as *Journal of the Association of Information Systems*, *Journal of Management Information Systems*, *Decision Support Systems*, and *Journal of Computer-Mediated Communication*.

Suprateek Sarker (“Exploring Agility in Distributed Information Systems Development Teams: An Interpretive Study in an Offshoring Context”) is currently a Professor and Microsoft Chair of Information Systems at the Copenhagen Business School, Denmark. Much of his research has involved the use of qualitative research approaches to study phenomena such as IT-enabled organizational change, ERP implementation, offshoring, and virtual and mobile collaboration. At this time, he is serving on the editorial boards of journals such as *MIS Quarterly*, *Journal of the AIS*, *IEEE Transactions of Engineering Management*, *IT & People*, *IT for Development*, and *Journal of Information Technology and Application Research*.

Viswanath Venkatesh (“A Control Theory Perspective on Agile Methodology Use and Changing User Requirements”), who completed his Ph.D. at the University of Minnesota in 1997, is a Professor and Billingsley Chair in Information Systems at the Walton College of Business, University of Arkansas. His research focuses on understanding the diffusion of technologies in organizations and society. His work has appeared and is forthcoming in leading information systems, organizational behavior, operations management, marketing, and psychology journals. His articles have been cited about 6,500 times per Google Scholar and about 2,700 times per Web of Science. Some of his papers published in various journals (*Information Systems Research* in 2000, *Decision*

Sciences in 1996, *MIS Quarterly* in 2003, and *Management Science* in 2000) are among the most cited papers published in those respective journals. He serves and has served on the editorial boards of a number of different journals, and he is currently serving as a Senior Editor at *Information Systems Research* and as an Associate Editor at *Decision Sciences Journal*, and he has served as an Associate Editor at *MIS Quarterly* and *Management Science*.

Richard Vidgen (“Coevolving Systems and the Organization of Agile Software Development”) is Professor of Information Systems in the School of Management at the University of Bath. Following fifteen years working in the IT industry he studied for a Ph.D. in Information Systems at the University of Salford. He has co-authored two books on IS development and published many research papers in scholarly journals, including *Information & Management*, *Information and Organization*, *the Information Systems Journal*, and *the European Journal of Information Systems*. His current research interests include complex adaptive systems theory, agile systems development, and e-commerce quality.

Xiaofeng Wang (“Coevolving Systems and the Organization of Agile Software Development”) is a research fellow in Lero, the Irish software engineering research center. Her research areas include software development process methods, agile software development, and complex adaptive systems theory. Her doctoral study investigated the application of complex adaptive systems theory in the research of agile software development. She has also worked in a research institute in Italy for several years in the area of enterprise knowledge systems. She has published several papers in major IS journals and conferences.
