With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes.

About Our Authors

Gove Allen (“Is Query Reuse Potentially Harmful? Anchoring and Adjustment in Adapting Existing Database Queries”) received his Ph.D. from the University of Minnesota in 2001 and is currently an assistant professor of information systems at Brigham Young University’s Marriott School of Management. Dr. Allen has consulted for major corporations on implementing information technology, including AT&T, Hewlett Packard, Micron, Intel, 3M, American Express, and the Kennedy Space Center. He is currently an associate editor for *Electronic Commerce Research and Applications*. Dr. Allen maintains webSQL.org, a site for teaching database management.

Animesh Animesh (“Research Note—Quality Uncertainty and the Performance of Online Sponsored Search Markets: An Empirical Investigation”) is an assistant professor at the Desautels Faculty of Management, McGill University, Canada. He studies the adoption, design, and impact of Internet technologies and electronic commerce. Animesh has a Ph.D. from University of Maryland, a master’s in information systems management from Carnegie Mellon University, and a bachelor’s degree in business studies from Delhi University.

Ashish Arora (“An Empirical Analysis of Software Vendors’ Patch Release Behavior: Impact of Vulnerability Disclosure”) is a professor of economics and public policy in the Heinz School. He served as a codirector of the Software Industry Center at Carnegie Mellon University until 2006. He is on the editorial board of six academic journals and has served on a number of committees for organizations such as the National Academy of Sciences and the Association of Computing Machinery.

Doug Arthur (“Issues and Opinions—IT Careers Camp: An Early Intervention Strategy to Increase IS Enrollments”) is an executive director of the INTERalliance of Greater Cincinnati, a nonprofit formed in 2004 to give regional IT talent compelling reasons to stay local for college and their careers. The INTERalliance has grown in four years to include 40 local

high schools, 4 universities, and 35 leading businesses. Since 2003, Doug has been the Great Lakes commercial support services manager for Atos Origin, a global IT services company headquartered in Paris and Brussels.

Haldun Aytug (“Induction over Strategic Agents”) is an associate professor of information systems and operations management at the Warrington College of Business, University of Florida. He has a B.S. degree in industrial and engineering and a Ph.D. in business. His research interests include machine learning, theory of genetic algorithms, capacity modeling for data networks, and scheduling. He is a member of INFORMS and ACM.

Fidan Boylu (“Induction over Strategic Agents”) is currently serving as an assistant professor in the operations and information management department at the University of Connecticut. She has a B.S. degree in electrical and electronics engineering and an MBA and Ph.D. from University of Florida. Her research involves classification of observations when the associated data will be deliberately manipulated by self-interested agents. Her work was nominated for a best paper award in *HICCS* 2006.

Jianqing Chen (“Ex Ante Information and the Design of Keyword Auctions”) is an assistant professor at Haskayne School of Business at the University of Calgary. He received his Ph.D. from McCombs School of Business at the University of Texas at Austin in 2008. His current research interests include electronic commerce and economics of information systems.

Vidyanand Choudhary (“Use of Pricing Schemes for Differentiating Information Goods”) is an assistant professor at the Paul Merage School of Business, University of California, Irvine. He received his Ph.D. from the Krannert Graduate School of Management, Purdue University. His research interests are in the area of economics of information systems and include topics such as information goods pricing, price discrimination and versioning strategy, and electronic

intermediation. He has published in journals such as *Management Science*, *Information Systems Research*, and the *Journal of Management Information Systems*.

Vivek Choudhury (“Issues and Opinions—IT Careers Camp: An Early Intervention Strategy to Increase IS Enrollments”) is an associate professor and head of the IS department at the College of Business at the University of Cincinnati. He earned his doctorate in information systems from UCLA. His publications have appeared in such outlets as *Information Systems Research*, *MIS Quarterly*, and the *Journal of Strategic Information Systems*. He has served as a senior editor at *MIS Quarterly* and an associate editor at *Information Systems Research*.

Debabrata Dey (“Design and Analysis of Contracts for Software Outsourcing”) is a professor of information systems at the Michael G. Foster School of Business, University of Washington, Seattle. He is primarily interested in business issues related to data uncertainty, network pricing and performance, and economics of information systems. His research has been published in many leading journals such as *Management Science*, *Operations Research*, *Information Systems Research*, *ACM Transactions on Database Systems*, *IEEE Transactions on Knowledge and Data Engineering*, and *INFORMS Journal on Computing*.

Ming Fan (“Design and Analysis of Contracts for Software Outsourcing”) is an assistant professor of information systems at the Michael G. Foster School of Business, University of Washington, Seattle. His research interests include economics of information technology, online community and social network, digital media, and supply chain management. He has published in many scholarly journals, such as *Information Systems Research*, *IEEE Transactions on Knowledge and Data Engineering*, the *Journal of Management Information Systems*, and *European Journal of Operational Research*.

Amy Greenwald (“On Evaluating Information Revelation Policies in Procurement Auctions: A Markov Decision Process Approach”) is an assistant professor of computer science at Brown University in Providence, Rhode Island. Her primary research area is the study of economic interactions among computational agents. Her primary methodologies are game-theoretic analysis and simulation. Her work

is applicable to areas ranging from dynamic pricing to autonomous bidding to transportation planning and scheduling. She was awarded a Sloan Fellowship in 2006; she was nominated for the 2002 Presidential Early Career Award for Scientists and Engineers (PECASE); and she was named one of the Computing Research Association’s Digital Government Fellows in 2001. Before joining the faculty at Brown, Dr. Greenwald was employed by IBM’s T. J. Watson Research Center, where she researched information economies. Her paper entitled “Shopbots and Pricebots” (joint work with Jeff Kephart) was named Best Paper at IBM Research in 2000.

Karthik Kannan (“On Evaluating Information Revelation Policies in Procurement Auctions: A Markov Decision Process Approach”) is an assistant professor of management at Purdue University’s Krannert School of Management. His current research focuses on markets and pricing of information goods/services through auctions, as well as on economics of information security. His papers have appeared in several leading conferences and journals in the information systems area, including *Management Science*, *Workshop on Information Technology and Systems*, *Workshop on Information Systems Economics*, *Workshop on Economics of Information Security*, *International Conference on Information Systems*, and *Conference on Information System and Technology*. His papers have won the Best Paper Awards in the 10th and the 15th *Annual Workshops on Information Technology and Systems*. He is also on the editorial review board of the *Journal of Database Management*.

Prasanna Karhade (“Contractual Provisions to Mitigate Holdup: Evidence from Information Technology Outsourcing”) is currently an assistant professor in the Department of Information Systems, Business Statistics and Operations Management at the Hong Kong University of Science and Technology. He earned his Ph.D. at the University of Illinois at Urbana–Champaign.

Gary J. Koehler (“Induction over Strategic Agents”) is the John B. Higdon Eminent Scholar at the University of Florida’s ISOM department. He received his Ph.D. from Purdue University in 1974. Between 1979 to 1987 he was cofounder and CEO of a 260-person high-tech company. His research interests are at the intersection of management science and information systems. He has published in *Management*

Science, the *Informs Journal on Computing*, and others. He is an area editor for *Decision Support Systems*.

Ramayya Krishnan (“On Evaluating Information Revelation Policies in Procurement Auctions: A Markov Decision Process Approach”) is the W. W. Cooper and Ruth F. Cooper Professor of information systems at the Heinz College at Carnegie Mellon University. His current research projects investigate risk management in business process design and in information privacy and security, grid economics, and the design of policies that take into account the competing needs of promoting data access and protecting privacy. He is also interested in e-business. He is presently the co-department editor for information systems at *Management Science*. His editorial experience includes his work as co-area editor for telecommunications and electronic commerce at the *INFORMS Journal on Computing*, as an associate editor for *Management Science*, as an associate editor for *Operations Research*, and as an associate editor for *Information Systems Research*. He has also edited special issues for the journals *Interfaces* and *Management Science*.

De Liu (“Ex Ante Information and the Design of Keyword Auctions”) is an assistant professor of information systems at the University of Kentucky. His research interests include Internet advertising, knowledge sharing networks, and digital entertainment. His recent papers have appeared in the *Journal of Marketing* and *Decision Support Systems*. He received his Ph.D. in information systems from the University of Texas at Austin in 2004.

Alexandre B. Lopes (“Issues and Opinions—IT Careers Camp: An Early Intervention Strategy to Increase IS Enrollments”) is an assistant professor and MS-IS Program Director at the University of Cincinnati. He works with online information goods and collaboration technologies. He has done research on evaluation of online content, strategic positioning of firms distributing real time information, and the development of face-to-face and online social networks. His work has appeared in the *Journal of Management Information Systems*, *Information and Management*, *Communications of the ACM*, and several other journals and conferences.

Jeffrey Parsons (“Is Query Reuse Potentially Harmful? Anchoring and Adjustment in Adapting

Existing Database Queries”) is a professor in the Faculty of Business Administration at Memorial University of Newfoundland. His research interests include systems development and data management. His research has been published or will appear in journals such as *Management Science*, *MIS Quarterly*, the *Journal of Management Information Systems*, *Communications of the ACM*, *ACM Transactions on Database Systems*, and *IEEE Transactions on Software Engineering*. He is a senior editor for the *Journal of the Association for Information Systems* and an associate editor for *Information Systems Research*.

Vandana Ramachandran (Research Note—Quality Uncertainty and the Performance of Online Sponsored Search Markets: An Empirical Investigation”) is an assistant professor at the David Eccles School of Business, University of Utah. She will receive her Ph.D. from the University of Maryland, College Park in Fall 2008. Her research interests include economics of information technologies and e-business models. Her recent work examines the impact of decentralized online information on consumers’ information-seeking behaviors and e-tailer strategies using econometric and clickstream modeling techniques. She earned her bachelor’s degree summa cum laude in computer engineering and her master’s in information systems from the University of Arkansas, Fayetteville.

Ramesh Sankaranarayanan (“Electronic Markets, Search Costs, and Firm Boundaries”) is an assistant professor of information systems at the School of Business, University of Connecticut. His research focuses on strategic analysis of digital goods and the impact of information systems on business processes and the structure of firms. His prior work has appeared in *Marketing Science* and *ACM Transactions*. He has a Ph.D. from NYU Stern, an MBA from IIM Ahmedabad, and a B.Tech. from IIT Madras, India.

Ramanath Subramanyam (“Contractual Provisions to Mitigate Holdup: Evidence from Information Technology Outsourcing”) is an assistant professor in the Department of Business Administration at the University of Illinois at Urbana–Champaign. He received his Ph.D. in business administration from the University of Michigan, Ann Arbor. He has published (or has papers forthcoming) in *IEEE Transactions on Software Engineering*, *Decision Support Systems*, *Communications*

of the ACM, and the *Journal of Organizational Computing and Electronic Commerce*.

Arun Sundararajan (“Electronic Markets, Search Costs, and Firm Boundaries”) is an associate professor and NEC Faculty Fellow at the Stern School of Business, New York University. His research studies the economics of IT and how IT transforms industries and society. He has published in *Decision Support Systems*, *Economics Letters*, *Information Systems Research*, the *Journal of Economic Literature*, the *Journal of Management Information Systems*, *Management Science*, and *Statistical Science*. His degrees are from IIT Madras and the University of Rochester.

Anjana Susarla (“Contractual Provisions to Mitigate Holdup: Evidence from Information Technology Outsourcing”) is an assistant professor in the Department of Information Systems and Operations Management at the Michael G. Foster School of Business at the University of Washington at Seattle. She received her Ph.D. in information systems from the University of Texas at Austin. Her research has appeared in journals such as *MIS Quarterly*, *IEEE Computer*, and *IEEE IT Professional*.

Rahul Telang (“An Empirical Analysis of Software Vendors’ Patch Release Behavior: Impact of Vulnerability Disclosure”) is an associate professor of information systems and management at the Heinz School, Carnegie Mellon University. His areas of interest include economics of security and piracy. He has published numerous articles in journals such as *Management Science*, *Information Systems Research*, the *Journal of Marketing Research*, etc. He is on the editorial board of *Management Science* and *Information Systems Research*.

Siva Viswanathan (Research Note—Quality Uncertainty and the Performance of Online Sponsored Search Markets: An Empirical Investigation”) is an

associate professor at the Robert H. Smith School of Business, University of Maryland, College Park. Siva studies the impact of online intermediaries on various sectors, including consumer retailing, financial services, and auto retailing. His current research also examines the implications of online sponsored search mechanisms for advertisers and consumers. Siva has a Ph.D. from New York University, a master’s in business administration, and a bachelor’s degree in engineering. His publications here appeared in various conference proceedings and in top academic journals.

Andrew B. Whinston (“Ex Ante Information and the Design of Keyword Auctions”) is Hugh Cullen Chair Professor in the IROM Department at the McCombs School of Business at the University of Texas at Austin. He is also the Director at the Center for Research in Electronic Commerce. His recent papers have appeared in *Management Science*, *Information Systems*, the *Journal of Marketing*, *Marketing Science*, and the *Journal of Economic Theory*. In total he has published over 300 papers in the major economic and management journals and has authored 25 books. In 2005 he received the Leo Award from the Association for Information Systems for his long-term research contribution to the information system field.

Yubao Yang (“An Empirical Analysis of Software Vendors’ Patch Release Behavior: Impact of Vulnerability Disclosure”) is a Ph.D. student at the Heinz School, Carnegie Mellon University. His area of interest in economics of information security.

Conglei Zhang (“Design and Analysis of Contracts for Software Outsourcing”) is a doctoral student at the Michael G. Foster School of Business, University of Washington, Seattle. Her research interests are in the areas of software engineering and economics of information systems.
