Editorial

A Thanks to the Many Individuals Who Make Publication of *Marketing Science* Possible

A Personal Note

First, on a personal note, this year *Marketing Science* published a special issue on competitive responsiveness. David J. Reibstein and Dick R. Wittink edited this distinguished special issue.

Sadly, Dick tragically died just a few months after his special issue appeared. Our heartfelt thanks goes out to Dick for both his everlasting imprint on the profession of marketing and his enduring contribution to *Marketing Science*. I deeply regret the loss of a colleague, a true scholar, an exemplar, and a friend.

Journal Statistics

Bold innovative research in marketing science continues at a record pace. Manuscript submissions to *Marketing Science*, our eminent journal, remain high.

As Panel 1 (new submissions), Panel 2 (all submissions), and Panel 3 (published articles) reveal that submissions, revisions, and acceptances are all at historically high levels, we project 2005 new manuscript submissions to be 101% higher than those of 2001.

As Panel 4 illustrates, a coordinated team effort by diligent area editors, meticulous reviewers, and dedicated, responsive authors has not let the increased volume hurt either the efficiency of the review process or its quality. We continue to decrease total turnaround time while maintaining the same number of quality reviews. Hardworking review teams have been able to maintain the outstanding quality of the journal while adhering to remarkably tight deadlines. Certainly, every author sincerely appreciates constructive reviews delivered in a timely manner.

Panel 5 shows the impact of our higher submission rate. Increased submissions have led to a greater burden on reviewers and area editors. *Marketing Science* now processes over 380 manuscripts per year with over 900 reviews by 500 to 600 different reviewers. We also benefitted from the admirable and fastidious effort of sixty to eighty different area editors and four recent acting editors.

Authors can look forward to decisions that are both quick and careful, a minimum number of revisions, and a rapid copyediting assigned and reviewed by our first-rate production editor, Stephen Siegforth. It is impossible here to detail all of the much-appreciated efforts of all of the individuals who have provided (ad hoc and regular) reviews and area editor (guest and regular) reports.

Panels 6, 7, and 8 recognize just a few of our 69 recent area editors (guest and regular) and 560 recent reviewers (guest and regular).

Panel 6 recognizes a few of our most productive area editors, based on the number of reports written and on the speed of completion.

Panel 7 recognizes a few of our most productive area editors (based on combined timeliness and the number of reports written).

Panel 8 recognizes the cumulative efforts of several very dedicated area editors during the term of the current editor-in-chief.

Panel 9 recognizes a few of our most productive regular and ad hoc reviewers (based on number of reports written, speed of completion, and a combination of these two criteria).

Finally, let us not forget to thank the authors. *Marketing Science* requires and gets outstanding manuscripts from many individuals. Panel 10, based on some very preliminary citation data, provides some of the most-cited articles by year over the last three years. Note that citation counts do change from year to year. For example, Bolton (1998) has just become the most-cited *Marketing Science* article in the last 10 years. Moreover, citations are obviously just one measure of impact, and this panel includes only a very small number of the myriad articles that contribute to the distinction of *Marketing Science* and its coveted impact in numerous communities.

Thank you all for an outstanding job!
