With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

NOTES ABOUT AUTHORS

Carl G. Baker ("The Convergence Technique: A Method for the Planning and Programming of Research Efforts") is Associate Director for Program, National Cancer Institute, National Institutes of Health. Dr. Baker earned the A.B. degree (Zoology) at the University of Louisville, the M.D. degree at the University of Louisville School of Medicine, and was a Jane Coffin Childs Fellow at the University of California, earning the M.A. degree (Biochemistry). He also attended the Program of Executive Development for Federal Administrators at the University of Chicago. Dr. Baker is presently involved in cancer research and broad scale program analysis and planning in the cancer research field. He is a member of the Editorial Advisory Board of the journal, *Cancer*, and has written and published extensively in his fields of interest.

Norman R. Baker ("Some Organizational Factors Related to the Effectiveness of Management Science Groups in Industry") is Assistant Professor of Industrial Engineering at Purdue University. He is a Consultant on Research Management Activity at Northwestern University and a Consultant to the U.S. Army Weapons Command. Dr. Baker received the B.S., M.S. and Ph.D. degrees in Industrial Engineering at Northwestern University. His present activities include behavioral and economic studies related to industrial R & D activities, and applying operations research to library systems. Dr. Baker published (with W. H. Pound) "R & D Project Selection: Where We Stand," *IEEE Transactions on Engineering Management*, Vol. EM-11 (Dec. 1964). He is a member of TIMS, ORSA, and AAAS.

William Beranek ("Financial Implications of Lot-Size Inventory Models") is Chairman of the Department of Finance and Professor of Finance at the Pennsylvania State University. He is the Consulting Editor of Finance for Holt, Rinehart and Winston. From the University of California at Los Angeles Dr. Beranek received the B.S. degree in Accounting, the M.B.A. degree in Finance, and the Ph.D. degree in Economics. He is the author of: *Analysis for Financial Decisions* (Richard D. Irwin, Inc., 1963), and *Working Capital Management* (Wadsworth Publishing Co., 1966). Dr. Beranek is engaged in research on the application of quantitative methods to financial decision making. He is a member of TIMS, The American Economic Association, and The Econometric Society.

Louis M. Carrese ("The Convergence Technique: A Method for the Planning and Programming of Research Efforts") is Program Planning Officer, National Cancer Institute, National Institutes of Health. He received the B.A. and M.A. degrees from the University of Rochester and is completing his dissertation for the Ph.D. degree in Industrial Sociology from the University of Maryland. Mr. Carrese's research concerns the development of planning-programming techniques (and specifically for biomedical research). He is investigating the impact of formalized program planning on the staff investigator and the con-

ceptualization of his role of "research scientist." Mr. Carrese has collaborated on various papers dealing with cancer research.

David W. Conrath ("Organizational Decision Making Behavior Under Varying Conditions of Uncertainty") is Assistant Professor of Industry, University of Pennsylvania. He received the A.B. (Economics) at Stanford University, the M.S. (Industrial Administration) at Carnegie Institute of Technology the M.A. (Economics) and the Ph.D. (Business Administration) at the University of California, Berkeley. He has produced a number of working papers and is currently finishing a series of experimental games designed to study the escalation of conflict. The efficiency and effectiveness of multi-person decision making is another area of interest, and he intends to run a series of laboratory investigations into asymmetrical, bilateral-monopoly bargaining behavior.

Dwight B. Crane ("A Two-Stage Forecasting Model: Exponential Smoothing and Multiple Regression") is Associate Economist with the Mellon National Bank and Trust Company of Pittsburgh. He is responsible for research relating to the bank's portfolio management and for the direction of the operations research staff. Dr. Crane studied at M.I.T., where he earned his B.S. degree. He obtained the M.B.A. at the University of Michigan, the M.S. and the Ph.D. at Carnegie Institute of Technology.

James R. Crotty ("A Two-Stage Forecasting Model: Exponential Smoothing and Multiple Regression") is associated with the Economics Department of the State University of New York at Buffalo. Mr. Crotty received the B.S. degree at Fordham University, and the M.S. degree at Carnegie Institute of Technology, where he is currently completing his Ph.D. dissertation. He is presently studying the implications of neo-classical theory of the firm on firm asset and labor demand functions.

Marvin Denicoff ("Military Essentiality of Naval Aviation Repair Parts") is Operations Research Analyst in the Office of Naval Research. He received the A.B. degree from Temple University. Mr. Denicoff has collaborated on a number of articles that have been published in *Navel Research Logistics Quarterly*.

Robert C. Ferber ("The Role of the Subconscious in Executive Decision-Making") is Manager of Operations Research, The Singer Company, New York City. He received the B.S. degree (Chemistry) from Queens College, and M.S. degrees from Syracuse University (Organic Chemistry) and from M.I.T. (Course 1X (General)). This is Mr. Ferber's second appearance in *Management Science*. His first article, written with Herbert Holt, was published in April 1964. He has also published in *Hotel Gazette* and *Office Management*. Mr. Ferber is presently engaged in research on the topic of his paper. Also, he is involved in O.R. studies concerning the effect of new products on the previously existing product line. He is a member of TIMS and ORSA.

Ronald E. Frank ("Cluster Analysis in Test Market Selection") is Associate

Professor of Marketing, Wharton School of Finance and Commerce, University of Pennsylvania. He is a Consultant to Colgate-Palmolive, Inc., Marketing Research Corporation of America, Prentice-Hall, and other organizations. Dr. Frank received the B.S., B.A., and M.B.A. degrees in Marketing from Northwestern University, and the Ph.D. degree in Marketing from the University of Chicago. He is co-author of: *Quantitative Techniques in Marketing Analysis* (with Alfred Kuehn and William Massy, Irwin, 1962), and *Marketing: An Introductory Analysis* (with John Matthews, Theodore Levitt and Robert Buzzell, McGraw-Hill, 1964); also co-author (with Paul E. Green) of two books scheduled for 1967. His current research activities include the development of econometric brand demand models for food products; and studies of television viewing habits, brand loyalty and brand market structure (the suitability and complementarity of competing brands). He is a member of the American Marketing Association and the American Statistical Association.

Paul E. Green ("Cluster Analysis in Test Market Selection") is Professor of Marketing, Wharton School of Finance and Commerce, University of Pennsylvania. He earned the A.B., A.M. and Ph.D. degrees in Statistics at the University of Pennsylvania. Dr. Green has published numerous articles and books, including several which are scheduled for 1967. His present research is in the area of psychometric techniques in marketing. He is a member of TIMS, ORSA, the American Marketing Association, the American Statistical Association, and the AAAS.

Paul S. Greenlaw ("Simulation of a Psychological Decision Process in Personnel Selection") is Professor of Management, The Pennsylvania State University. He received the A.B. degree (History) from Syracuse University, the A.M. degree (History) from Clark University, and the Ph.D. degree (Political Science) from Syracuse University. He is a member of Phi Beta Kappa and the Academy of Management. Dr. Greenlaw is co-author of: *Business Simulation* (with Lowell W. Herron and Richard H. Rawdon, Prentice-Hall, 1962), *MARKSIM, A Marketing Decision Simulation* (with Fred W. Kniffin, International Textbook Company, 1964), *Management Decision Making* (with Max D. Richards, Irwin, 1966), *FINANSIM, A Financial Management Simulation* (with M. William Frey, International Textbook Co., 1967), and *PROSIM, A Production Management Simulation* (International Textbook Co., in press). In addition, he has published a number of articles in various journals.

Sheldon E. Haber ("Military Essentiality of Naval Aviation Repair Parts") is Senior Staff Scientist for the George Washington University Logistics Research Project. He received the A.B. degree from The City College of New York and the Ph.D. degree (Economics) from Johns Hopkins University. He co-authored two articles which appeared in *Naval Research Logistics Quarterly*. Dr. Haber is currently engaged in military logistics research and also labor economics. He is a member of the American Economics Association and the American Statistical Association.

David R. Heiman ("Some Organizational Factors Related to the Effectiveness of Management Science Groups in Industry") is a member of the Technical Staff of the Systems Analysis Department of the MITRE Corporation. His primary areas of activity are mathematical analysis of command and control systems. Mr. Heiman received the B.S. degree in Industrial Engineering from Washington University and the M.S. degree in Operations Research from Northwestern University. He is a member of ORSA and the Washington Operations Research Council.

Ira Horowitz ("A Note on Semi-Probabilistic Grading") is Professor of Business Administration, Indiana University, Bloomington. He received the B.A. (Economics) from Johns Hopkins University, and the Ph.D. (Industrial Economics) from M.I.T. He is author of *An Introduction to Quantitative Business Analysis* (McGraw-Hill, 1965), and numerous journal articles. Dr. Horowitz explains the subject of his article in this way: "My interest . . . was stimulated by the desire to indicate to the students . . . how there is little in decision making that is certain, and how fate can play a role in determining the success of one's decisions. The semi-probabilistic approach has the additional effect of teaching the students something more about utility . . . and their attitudes towards risk in particular." Dr. Horowitz is currently engaged in research on the implications of introducing the concepts of statistical decision theory into the traditional micro-economic theory of the firm.

Charles H. Kriebel ("On Statistical Cost Analysis and Operations Research") is Assistant Professor of Industrial Administration, Carnegie Institute of Technology. He earned the degrees of B.S. and M.A. at the University of Pennsylvania; Ph.D. at M.I.T. His activities include consulting and research in microeconomics, production and operations management, statistics and statistical decision theory.

John B. McColly ("Some Organizational Factors Related to the Effectiveness of Management Science Groups in Industry") is an Engineer for Esso Mathematics and Systems Co., Inc. Mr. McColly is a Ph.D. candidate (Organizational Behavior) at Northwestern University, from which he received the B.S. degree in Industrial Engineering and the M.S. degree in Operations Research. He is currently involved in research on factors affecting the impact of marketplace events upon decision makers. He is a member of TIMS, ORSA, Alpha Pi Mu, and Pi Mu Epsilon.

J. T. Presby ("An Algorithm for Solving Job Sequencing Problems") is a Consultant for Touche, Ross, Bailey & Smart in New York City. He earned the B.S. degree in Electrical Engineering from Rutgers University and the M.S. degree in Industrial Administration from Carnegie Institute of Technology. He also attended the University of Dayton and is a Certified Public Accountant, State of Ohio. Mr. Presby's current research interests include capital budgeting and optimal approaches to the selection of capital sources.

Michael Radnor ("Some Organizational Factors Related to the Effectiveness of Management Science Groups in Industry") is Associate Professor, School of Business, Northwestern University. He attended Imperial College, London University, where he earned the B.S. degree in Mechanical Engineering and a Graduate Diploma in Production Engineering. He also received a Graduate Diploma in Business Administration from the London School of Economics. His Ph.D. degree (Industrial Engineering) was obtained at Northwestern University. Dr. Radnor has published papers in the *Journal of Industrial Engineering*, and *Proceedings of the 3rd IFORS Conference*. He authored "Control of R & D by Top Managers in 48 Very Large Companies," in *Operations Research and the Social Sciences* (J. R. Lawrence, ed., Tavistock, 1966). His present research activities include the study of the integration and utilization of management science activities in organizations, and R & D management studies. He is a member of TIMS, Sigma Xi, and Zlpha Pi Mu.

Patrick J. Robinson ("Cluster Analysis in Test Market Selection") is Director of Management Studies, Marketing Science Institute, Philadelphia. He is Visiting Lecturer at the Wharton School, University of Pennsylvania. Formerly, he was Manager of Marketing and Operations Research for Imperial Oil Limited, and Manager, Integrated Operations Planning for Socony Mobil Oil. Mr. Robinson received the B.Eng. at McGill University, the M.B.A. from Harvard University, and the R.I.A. in Accounting from the University of Toronto. Mr. Robinson's articles have appeared in *Business Horizons*, *Business Quarterly*, *JMR*, and the *Harvard Business Review*. He is a member of the American Marketing Association, AIIE, the Society of Industrial Cost Accountants, the American Management Association, CORS, ORSA, and the Society for the Advancement of Management.

Albert H. Rubenstein ("Some Organizational Factors Related to the Effectiveness of Management Science Groups in Industry") is Professor, Department of Industrial Engineering and Management Sciences, Northwestern University; previously, Assistant Professor of Industrial Management, M.I.T. He received the B.S. (*Magna Cum Laude*) from Lehigh University and the M.S. and Ph.D. (Industrial Engineering) from Columbia University. In addition to publishing journal articles, Dr. Rubenstein edited (with C. V. Haberstroh) *Some Theories of Organization* (Irwin-Dorsey Press, revised edition, 1966). He is Principal Investigator of Program of Research on the Management of Research and Development, supported by NSF, NASA, Office of Naval Research, DOD, private foundations, and internal research funds. The program consists of a dozen continuing projects related to the economics and organization of research and development. Dr. Rubenstein is also Consultant on Science Policy to the National Science Division of UNESCO and a member of the Engineering and Research Management Committee, American Society of Metals; Management Technical Committee, American Institute of Aeronautics and Astronautics; and the Committee on Application of Research Findings of the Highway Research Board. He is Editor of *IEEE Transactions on Engineering Management* and a

member of TIMS, Tau Beta Pi, Pi Tau Sigma, Pi Delta Epsilon, Micron Delta Kappa, Pi Gamma Mu, Alpha Pi Mu, and Sigma Xi.

Robert D. Smith ("Simulation of a Psychological Decision Process in Personnel Selection") is Assistant Professor of Management, The Pennsylvania State University. He received the B.S. (Industrial Management) from Gannon College and the M.S. and Ph.D. (Business Administration) from The Pennsylvania State University. He has published in the *Journal of Industrial Engineering* and authored the Instructor's Manual to accompany *The Management of Business* by Earl P. Strong (Harper and Row, 1965). He is presently engaged in research on the simulation of cognitive processes and the application of operations research techniques in the field of personnel management. Dr. Smith is a member of the American Academy of Management, Beta Gamma Sigma and Omicron Delta Kappa.

Thomas C. Varley ("Military Essentiality of Naval Aviation Repair Parts") is a Mathematical Statistician in the Office of Naval Research. He received the B.A. and M.A. (Business and Economic Statistics) from George Washington University. He co-authored (with Jerome Bracken) an article published in *Naval Research Logistics Quarterly*. His current research interests are information retrieval, the auditing and validation of input data, and large scale terminal logistics problems. Mr. Varley is a graduate student in Business Administration at George Washington University.

M. L. Wolfson ("An Algorithm for Solving Job Sequencing Problems") is Senior Industrial Engineer, U. S. Steel, Pittsburgh. He received his B.S. (Chemistry) at The City College of New York, and the M.S. (Chemical Engineering) from Columbia University. He has done graduate work at a number of schools, including the University of Pittsburgh, Carnegie Institute of Technology, and the University of Connecticut. Mr. Wolfson has published a number of journal articles and is presently working on projects in simulation, inventory, scheduling, and combinatorial problems.
