With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

## NOTES ABOUT AUTHORS

**John I. S. Hsu** ("An Empirical Study of Computer Maintenance Policies") is Professor of Business Administration, Villanova University. He received the Ph.D. degree in industrial management from the State University of Iowa. Dr. Hsu co-authored "Corporate Economic Responsibility," *Advanced Management* (April 1962); and "Decision-Making and Models," *Management Study Guide* (American College of Life Underwriters, September 1968). His present research activities include a survey of equipment replacement policy in practice. Dr. Hsu is a member of The Academy of Management.

**Seymour M. Kwerel** ("Information Retrieval for Media Planning") is Assistant Professor of Statistics at the Bernard M. Baruch College of the City University of New York. In addition, he has been actively engaged for many years in consulting in operations research, marketing and advertising problems, and in development of management information systems, for major corporations. He was a Ford Foundation Fellow at the Columbia Graduate School of Business during which he received a Ph.D. in Operations Research-Production Management, Economics and Marketing from Columbia University. Prior to this, Professor Kwerel had done graduate study in economics, econometrics and mathematical statistics at Iowa State University and Columbia University. He received a B.S. in mathematics from the City College of New York. His current research activity is in the areas of behavior of large dependent information systems; behavioral science typologies, and queueing theory. Dr. Kwerel is a member of TIMS, ORSA, The American Statistical Association, The Institute of Mathematical Statistics, and The American Marketing Association.

**Rodolfo C. Salazar** ("A Simulation Model of Capital Budgeting Under Uncertainty") is Controller of Pfizer, Inc., Korea. He received a B.S. in mechanical engineering from the University of the Philippines, an M.S. in mechanical engineering from Princeton University, and an M.S. in industrial administration from Carnegie-Mellon University. Mr. Salazar is co-author (with Subrata K. Sen) of "MINIT Algorithm for Linear Programming," *Communications of the Association for Computing Machinery* (June 1968). He is a member of TIMS, American Management Association, American Society of Mechanical Engineers, and Philippine Marketing Association.

**Subrata K. Sen** ("A Simulation Model of Capital Budgeting Under Uncertainty") is Assistant Professor in the Graduate School of Business, University of Texas, Austin. He received a B.S. in electrical engineering from the Indian Institute of Technology, Kharagpur, India, an M.S. in industrial engineering from the Polytechnic Institute of Brooklyn, and he expects to receive a Ph.D. in industrial administration from Carnegie-Mellon University in June 1969. Mr. Sen is co-author (with H. Rosenthal) of "Candidate Selection and Voting Behavior in France," forthcoming, *Public Choice* (formerly, *Papers in Non-Market Decision Making*). His present research interests include models of Presidential campaign strategies in the U.S. and blank balloting and abstention in the French Fifth Republic. Mr. Sen is a member of TIMS and ORSA.

**Shizuo Senju** ("An Approach to Linear Programming with 0-1 Variables") is Professor of Production Control and Administration Engineering, Keio University, Tokyo, Japan. He received a B.S. and a Ph.D. in mechanical engineering from Keio University. Dr. Senju has published around 50 articles (most of them in Japanese). His books (in Japanese) include *Introduction to Operations Research*, 1959; *Operations Research* (co-author) 1962; *Linear Programming*, 1967; and *Economy Engineering* (co-author), 1967. His present research interests include quality control, preventive maintenance and operations research. Dr. Senju is Editor of *IE Review* (official publication of the Japan Institute of Industrial Engineering). He is a Council member of Operations Research Society of Japan and a Council member of Japan Industrial Management Association. He is also an honorary member of I.E. Section of Japan Management Association, and liaison personnel for the International Quality Control Association.

**Yoshiaki Toyoda** ("An Approach to Linear Programming with 0-1 Variables") is a Management Administration Engineer with Dainippon Ink and Chemicals, Inc., Tokyo, Japan. He received a B.S. in administration engineering from Keio University (Japan) and an M.S. in industrial engineering from Stanford University. Mr. Toyoda's present research is concerned with applications of industrial engineering techniques to business. He is a member of Japan Industrial Management Association.
