Printed in U.S.A.

NOTES ABOUT AUTHORS

E. M. Babb ("Analysis of Factors Affecting Least-Cost Size of Plant") is Professor of Agricultural Economics at Purdue University. He received a B.S. and an M.S. in agricultural economics, both from Virginia Polytechnic Institute and a Ph.D. in agricultural economics from Pennsylvania State University. He previously worked as an Assistant Professor at Pennsylvania State University and as an economist for Eastern Milk Producers Corporation. He has published *Management Games for Teaching and Research*, (Educational Methods, Inc., Chicago, 1966) and "Analysis of Cooperative Bargaining in Tomato Industry," *Journal of Farm Economics* (February 1969). The analysis of economic behavior in management gaming experiments is his present research project, while the design of information systems and system simulation occupied him in the past. Dr. Babb is a member of the American Economic Association and the American Agricultural Economic Association. He is currently on leave from Purdue University as a Social Science Research Council research training fellow and Visiting Professor at the University of California, Berkeley.

Gary L. Bergstrom ("Multi-Item Production Planning—An Extension of the HMMS Rules") is an Assistant Vice President at the Putnam Management Company, Boston, where he is responsible for operations research and management information systems. He received a B.S. and an M.S. in industrial engineering from Purdue University, and a Ph.D. in operations management from the Sloan School of Management at MIT. He was formerly an instructor in operations management at the Sloan School of Management, and a researcher at the Indian Institute of Management in Calcutta. He also worked in corporate information systems at Western Electric Company and as a systems analyst at TRW Systems. He has published "Multi-Item Production Planning" as a Sloan School of Management Working Paper (May 1968, with Barnard Smith). Portions of this article will also appear in the forthcoming book, *Resource Utilization in Two Indian Firms: A Mathematical Programming Analysis*, to be published by Progressive Corporation Pvt. Ltd., Bombay, India. Previously, Dr. Bergstrom was engaged in research on production scheduling and inventory control and the application of quantitative models in development economics; now, he is exploring analytical methods for investment management decisions and management information systems for financial decision makers. He is a member of TIMS.

Herbert G. Campbell ("A Heuristic Algorithm for the n Job, m Machine Sequencing Problem") is a Lieutenant Colonel in the United States Air Force at the Pentagon in Washington, D.C. He received a B.S. in civil engineering from the University of New Mexico and an M.S. in industrial engineering from Texas Tech University. He has had sixteen years experience in Air Force Civil Engineering and was responsible for the maintenance of the physical plant at bases in Turkey, France, Korea and the United States. Lt. Col. Campbell has published articles in the *The Air Force Civil Engineer* and *The Military Engineer*. He was previously engaged in researching the development of the heuristic algorithm for the n job, m machine sequencing problem, which was the subject of his master's thesis. He is a member of Alpha Pi Mu, the American Society of Civil Engineers and the Society of American Military Engineers, in addition to being a Registered Professional Engineer in New Mexico.

Pao Lun Cheng ("Statistical Control of Assessment Uniformity") is a Professor of Finance at the School of Business Administration of the University of Massachusetts. He received a Ph.D. in economics from the University of Wisconsin. Previously, he held the position of lecturer of economics in the Department of Economics of Michigan State University. Several of his publications are "Optimum Bond Portfolio Selections," *Management Science* (July 1962) and "Consumption of Nondurable Goods," *Review of Economics and Statistics* (August 1963). Dr. Cheng has also published articles in *Journal of Finance* and *National Tax Journal*. In the past, he researched bargaining theory, capital budgeting and the theory of financial firms, whereas he is now interested in speculative stock price behavior and capital market equilibria. Dr. Cheng is a member of the American Economic Association, the Econometric Society and the American Finance Association.

David W. Cravens ("An Exploratory Analysis of Individual Information Processing") is an Associate Professor of Marketing at the College of Business Administration of the University of Tennessee. He received a B.S. in engineering from MIT, an M.B.A. in management and a D.B.A. in marketing, both from Indiana University. He was formerly Director of Operations of the Aerospace Research Applications Center at Indiana University and a Marketing Planning Coordinator for the Oilfield Division of International Systems and Controls, Inc. He has published articles appearing in journals such as *Science*, *Technology and Marketing*, *Business Horizons* and *Transportation Journal*, among others. Previously, he was engaged in researching analysis and design of

information-decision systems, prediction of salesman performance and the diffusion of technology; he is now engaged in multidimensional market segmentation analysis and study of information processing behavior. Dr. Cravens is a member of the American Marketing Association, the American Institute of Decision Sciences and TIMS.

Richard A. Dudek ("A Heuristic Algorithm for the n Job, m Machine Sequencing Problem") is Professor and Chairman of the Department of Industrial Engineering of Texas Tech University in Lubbock, Texas. He is also a Registered Professional Engineer in Iowa and Texas. He received a B.S. in mechanical engineering from the University of Nebraska, and an M.S. and Ph.D., both in industrial engineering, from the State University of Iowa. Dr. Dudek has held positions at the University of Pittsburgh, the University of Nebraska, the State University of Iowa and the Fairmont Foods Company. He has published in the *Journal of Operations Research, International Journal for Production Research, Journal of Industrial Engineering, Human Factors, Engineering Psychology* and others. "Sequencing Research" and "Performance Recovery and Man-Machine Effectiveness" are his present research projects, while in the past, they were sequencing research, conveyor theory, vibration studies and more. Dr. Dudek is a member of TIMS, AIIE, ASME, ASEE, AAAS, Human Factors, NSPE, TSPE, Sigma Xi, Phi Kappa Phi, Alpha Pi Mu, Pi Tau Sigma and Pi Mu Epsilon.

R. R. Hocking ("Optimum Time Compression in Project Scheduling") is a Professor at the Institute of Statistics of Texas A&M University. He received a B.S. in electrical engineering from Michigan Technological University, an M.S. in mathematics from the University of Michigan and a Ph.D. in mathematics and statistics from Iowa State University. He was formerly an Assistant Professor of Mathematics at Michigan Technological University. Dr. Hocking has published numerous articles in journals such as *Technometrics*, *The American Statistician*, and *Management Science*, to name a few. He is currently researching statistical estimation theory and mathematical programming. Dr. Hocking is a member of the American Statistical Association and the Society of Sigma Xi.

L. R. Lamberson ("Optimum Time Compression in Project Scheduling") is Professor and Chairman of the Department of Industrial Engineering at General Motors Institute in Flint, Michigan. He received a B.M.E. in mechanical engineering from General Motors Institute, an M.S. in industrial engineering from North Carolina State University, and a Ph.D. in industrial engineering from Texas A&M University. He previously held academic positions at General Motors Institute and Texas A&M University, and was a production foreman in the Chevrolet Division of the General Motors Corporation. Dr. Lamberson has published "A Convex Programming Approach to the Multiple Constraint Inventory Problem," *The International Journal of Production Research*, Vol. 6, No. 4 (1968), and "A Note on Utility Functions for Time Compression in Network Based Scheduling Systems," *Logistics Spectrum*, Vol. 3, No. 2 (Summer 1969). He is a member of TIMS, ORSA, the American Institute of Industrial Engineers, ASEE, Sigma Xi, Alpha Pi Mu, and Tau Beta Pi.

John G. Myers ("Time-Path Types: From Static to Dynamic Typologies") is an Associate Professor at the Graduate School of Business Administration of the University of California at Berkeley. He received a B.S.F. in forestry-commerce from the University of British Columbia, an M.B.A. in business administration from the University of Western Ontario, an M.A. in sociology and a Ph.D. in marketing from Northwestern University. From 1958 to 1960, he was a lecturer at the University of Western Ontario, and from 1962 to 1964, he was a lecturer at Northwestern University. Dr. Myers has also has been a management trainee with Macmillan & Bloedel, a Ford Foundation Consultant in Cairo, Egypt, and a consultant in marketing research to several corporations. He has published several articles in the areas of psychological measurement and consumer/management decision-making. His current research project, "Cluster Analysis of Marketing Data," was presented at the Workshop on Multivariate Methods in Marketing, University of Chicago, in January 1970. Dr. Myers is a member of TIMS, ASA, AEA, ORSA, and ACM, in addition to being vice-president of the Northern California Chapter of the American Marketing Association and a partner in HMV Information Consulting Services in Berkeley.

Francesco M. Nicosia ("Time-Path Types: From Static to Dynamic Typologies") is Professor of Business Administration and Chairman, Marketing and International Business Group at the Graduate School of Business Administration, and Director of the Consumer Research Program at the Survey Research Center, University of California at Berkeley. He is also partner, Fredrickson-Nicosia, Marketing and Data Processing Consultants. His degrees include a Dottore, Economics and Commerce (specialization: probability theory and actuarial mathematics) from the University of Rome, Italy, and a Ph.D. in Business Administration (specialization: behavioral sciences) from the University of California.

David P. Rutenberg ("Maneuvering Liquid Assets in a Multi-National Company: Formulation and Deterministic Solution Procedures") is an Assistant Professor of Industrial Adminis-

tration at Carnegie-Mellon University in Pittsburgh and a consultant to Westinghouse Electric Corporation. He received the B.A.Sc. degree in engineering physics from the University of Toronto in 1961; and the M.B.A. and Ph.D. degrees in business administration from the University of California at Berkeley in 1964 and 1967, respectively. Previously, Dr. Rutenberg was an Operations Research Engineer with Chevron Research (Standard Oil of California). He has published "Planning for Multi-National Synergy" in *Long Range Planning,* "Generalized Networks, Generalized Upper Bounding and Decomposition of the Convex Simplex Method" and "Organizational Archetypes of a Multi-National Company" in *Management Science* (January 1970) and (February 1970) respectively. In addition, he has had several other articles accepted for publication. Presently he is developing models for planning in multi-national companies. Rutenberg writes, "When I wrote the original version in my doctoral dissertation at Berkeley, West Churchman (my chairman) never directly challenged the objective function of minimizing taxes to the world; instead he gently chided me to question how multi-national corporations make the world better or worse." He is a member of TIMS, ORSA, Econometric Society and the Association for Education in International Business.

Barnard E. Smith ("Multi-Item Production Planning—An Extension of the HMMS Rules") is a Professor of Engineering at the Thayer School of Engineering at Dartmouth College. He received a B.S. and an M.S. in mechanical engineering from the University of Minnesota and a Ph.D. in industrial engineering from Stanford University. He previously held various teaching positions at the Indian Institute of Management in Calcutta, M.I.T., Stanford University, Oregon State College and the University of North Dakota, and was also a manufacturing specialist for the A. O. Smith Company in Milwaukee. His many articles have appeared in journals such as *AIIE Transactions*, *Technometrics*, *Opsearch*, *Operations Research*, *Industrial Quality Control*, *The Engineering Economist* and the *Journal of Industrial Engineering*. In the past, he researched economic models for quality control; now, he is engaged in researching Bayesian models for process control. Dr. Smith is a member of TIMS, Sigma Xi, ASEE, Pi Tau Sigma, ASOC, and AIIE.

Milton L. Smith ("A Heuristic Algorithm for the n Job, m Machine Sequencing Problem") is Assistant Professor of Industrial Engineering and Computer Science and a Research Associate at Texas Tech University. He received a B.S., an M.S. and a Ph.D., all in industrial engineering, from Texas Tech University. From 1962 to 1965 he was a Management Engineering Officer in the U.S. Air Force. He is author of "An Economic Model of the Cotton Industry," presented at the Third Symposium on Arid Lands, Texas Tech University (September 1969) and "Optimal Strategy for Return of a Nonrandom Customer Competing with Random Arrivals," presented at the National ORSA Conference, Santa Monica, California (May 1966). Dr. Smith is currently researching a systems analysis of the national cotton industry and design of transportation networks to minimize construction and operation costs; previously, he researched the development and evaluation of sequencing-scheduling algorithms. He is a member of the American Institute of Industrial Engineers, Alpha Pi Mu, Phi Kappa Phi, and Tau Beta Pi.

T. K. Yu ("Analysis of Factors Affecting Least-Cost Size of Plant") is an Associate Professor of Agricultural Economics at Chung Hsing University, Taichung, Taiwan. He received a B.S. in agricultural economics from from Chung Hsing University, an M.S. in agricultural economics from Oregon State University, and a Ph.D. in agricultural economics from Purdue University. He previously was an instructor at Taiwan Provincial College. In the past, he explored agricultural marketing; presently, he is researching economic development.
