With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

NOTES ABOUT AUTHORS

David A. Aaker ("The New-Trier Stochastic Model of Brand Choice") is Assistant Professor at the School of Business Administration, University of California, Berkeley. He received a B.S. in management from Massachusetts Institute of Technology, an M.S. in operations research and a Ph.D. in business administration, both from Stanford University. Professor Aaker is the author of two books and a number of papers in journals such as *Journal of Advertising Research*, *Journal of Marketing Research*, *Journal of Marketing*, and *Analytical Chemistry*. His most recent papers are "Modeling Store Choice Behavior" (with J. Morgan Jones) in *Journal of Marketing Research* (February 1971) and "A New Method to Evaluate Stochastic Models of Brand Choice" in *Journal of Marketing Research* (August 1970). His present fields of research include communication processes, advertising decision making and the development and application of stochastic models of buyer behavior. He is a member of American Marketing Association, TIMS, ORSA, and Psychometric Society. Professor Aaker is also a member of the Editorial Board of the *Journal of Marketing Research*.

Frank M. Bass ("Decomposable Regression Models in the Analysis of Market Potentials") is Professor of Industrial Administration at the Krannert Graduate School of Industrial Administration, Purdue University. He received a B.B.A. in business and economics from Southwestern University, an M.B.A. in marketing from University of Texas, and a Ph.D. in business from the University of Illinois. In addition, Professor Bass was a Fellow of the Institute for the Application of Basic Mathematics to Business, Harvard University. In the past he held academic positions at Ohio State University, University of Texas, and University of Birmingham, England. He is the author of more than 40 publications including journal articles in *Management Science*, *Journal of Marketing Research*, *Applied Economics*, and *Journal of Business*. Professor Bass is currently engaged in research on statistical studies of sales and advertising and marketing processes. He is also involved in research projects sponsored by Consumer Research Institute, American Association and Advertising Agencies Education Foundation, and Marketing Science Institute. He is a member of TIMS, Econometric Society, ORSA, American Statistical Association and American Marketing Association. In addition, Professor Bass is Vice-President-Elect of Marketing Education Division and was Vice-Chairman of the TIMS College on Marketing (1969/70).

Norman E. Betaque ("Automating Judgmental Decision Making for a Serious Medical Problem") is a Captain in the U. S. Army,

currently serving in Vietnam. He received an S.B. from the United States Military Academy, West Point, and an M.S.E.E. in electrical engineering from Massachusetts Institute of Technology. He is the author of "Utility Theory Applied to Medical Diagnosis and Treatment" (Sloan School of Management Working Paper 393-69, May 1969). His past research has included decision theory and its applications (particularly medical).

R. Gordon Cassidy ("Efficient Distribution of Resources Through Three Levels of Government") is Assistant Professor of Urban Systems and Operations Research at Carnegie-Mellon University. He received a B.Sc. in mathematics from Acadia University and an M.A. and Ph.D. in mathematics from Dalhousie University. In the past he was a Research Scientist with the Defense Research Board, Canada. He is the author of several papers in *Journal of the Canadian Operational Research Society*, *Proceedings of the NATO Conference on the Use of Computers in Military Data Management Control*, and *Proceedings of the 5th International Conference on Operation Research*. He is presently doing research in random payoff games and urban systems. He is a member of Canadian Operational Research Society.

G. Anthony Gorry ("Automating Judgmental Decision Making for a Serious Medical Problem") is Associate Professor of Management at the Sloan School of Management, Massachusetts Institute of Technology, and Staff Member of Project MAC. He received a B.E. in chemical engineering from Yale University, an M.S. in chemical engineering from the University of California, Berkeley, and a Ph.D. in computer science from Massachusetts Institute of Technology. Professor Gorry is the author of a number of papers on computer-aided diagnosis, management information systems, and two papers on integer programming with Jeremy F. Shapiro. He is currently doing research in computer-aided decision making in medicine, integer programming and management information systems. He is a member of TIMS, ACM, Tau Beta Pi, and Sigma Xi.

Morton I. Kamien ("Optimal Maintenance and Sale Age for a Machine Subject to Failure") is Professor of Managerial Economics at Northwestern University. He received a B.A. in economics from City College of New York and a Ph.D. in economics from Purdue University. He is the author of a number of articles (co-authored with Nancy Schwartz) in *Econometrica*, *Journal of Applied Probability*, *Behavioral Science*, *International Economic Review*, *Public Choice*, *Water Resources Research*, and *Journal of Law and Economics*. His past research included economics of technical

change and committee decision making. Presently he is engaged in research on technical change and market structure, direct approach to decision making under uncertainty, and welfare economics.

Michael J. L. Kirby ("Efficient Distribution of Resources Through Three Levels of Government") is Assistant Dean of Arts and Science and Associate Professor of Mathematics at Dalhousie University, Halifax, Nova Scotia. He received a B.S. and an M.A. in mathematics from Dalhousie University and a Ph.D. in applied mathematics from Northwestern University. In the past Dr. Kirby served as Assistant Professor at the University of Chicago's Graduate School of Business and as a Systems Analyst for the Research Analysis Corporation. He is the author of more than twenty articles in such journals as *Management Science*, *Operations Research*, *Journal of the Canadian Operational Research Society*, and *Transportation Science*. In the past his fields of interest have included properties, methods of solution and application of probabilistic programming models. Dr. Kirby is a member of TIMS, ORSA, and CORS. He is also Associate Editor of *Operations Research*.

Kent B. Monroe ("The Information Content of Prices: A Preliminary Model for Estimating Buyer Response") is Assistant Professor of Marketing at the University of Massachusetts. He received a B.A. in economics-mathematics from Kalamazoo College, an M.B.A. in marketing from Indiana University, and a D.B.A. in business administration from University of Illinois. He is the author of "The Concept of Price Limits and Psychophysical Measurement: A Laboratory Experiment" in *Proceedings of Fall Educator's Conference, American Marketing Association* (forthcoming). Professor Monroe's present research interests center in the study of price-response functions with attention to the application of psychophysical methods. He also has an interest in the design and utilization of decision-oriented marketing information systems. He is a member of TIMS and American Marketing Association.

William M. Raike ("Efficient Distribution of Resources Through Three Levels of Government") is Visiting Associate Professor of Operations Analysis at the U. S. Naval Postgraduate School in Monterey, California. He received a Ph.D. in applied mathematics from Northwestern University. He is author of approximately 25 papers in the area of mathematical programming with particular emphasis on probabilistic programming. He is continuing his research in probabilistic programming and applications of optimization techniques to OR/MS, with an additional interest in applying computer techniques, including time-sharing, to OR/MS problems. Dr. Raike is a member of TIMS, ORSA, MAA, SIAM and the Econometric Society.

Timothy W. Ruefli ("A Generalized Goal Decomposition Model") is Assistant Professor and Director of Project Generalized University Model, Graduate School of Business, University of Texas, Austin. He received a B.A. in quantitative studies from Wesleyan University and an M.S. and Ph.D. in industrial administration from Carnegie-Mellon University. He is the author of "PPBS—An Analytic Approach" in *New Approaches to Budgeting*, edited by William W. Cooper (forthcoming). He is presently doing research in the development and application of management science techniques to nonprofit organizations. Professor Ruefli is a member of AAAS, TIMS, and ORSA.

David P. Rutenberg ("Three Pricing Policies for a Multi-Product Multi-National Company") is Assistant Professor of Industrial Administration at Carnegie-Mellon University, Pittsburgh. He received a B.A.Sc. in engineering physics from the University of Toronto and an M.B.A. and a Ph.D. in business administration, both from the University of California, Berkeley. Previously, Dr. Rutenberg was an Operations Research Engineer with Chevron Research (Standard Oil of California). He has published "Planning for Multi-National Synergy" in *Long Range Planning*, "Generalized Networks, Generalized Upper Bounding and Decomposition of the Convex Simplex Method", "Organizational Archetypes of a Multi-National Company" and "Maneuvering Liquid Assets in a Multinational Company" in *Management Science* (January 1970), (February 1970) and (June 1970) respectively. Professor Rutenberg is also the author of "Design Commonality to Reduce Multi-Item Inventory" (*Operations Research*, March/April 1971). In addition, he has had several other articles accepted for publication. Presently he is developing models for planning in multinational companies. Professor Rutenberg is a member of TIMS, ORSA, Econometric Society and the Association for Education in International Business.

Nancy L. Schwartz ("Optimal Maintenance and Sale Age for a Machine Subject to Failure") is Professor of Managerial Economics at Northwestern University. She received an A.B. in economics from Oberlin College and an M.S. and Ph.D. in economics from Purdue University. She is the author of a number of articles (co-authored with Morton Kamien) in *Econometrica*, *Journal of Applied Probability*, *Journal of Economic Theory*, *Metroeconomica*, *Behavioral Science*, *International Economic Review*, *Public Choice*, *Water Resources Research*, and *Journal of Law and Economics*. Presently Professor Schwartz is doing research in microeconomics of technical change.

Joseph Thomas ("Linear Programming Models for Production-Advertising Decisions") is Assistant Professor in the Graduate School of Business and Public Administration of Cornell

University. He holds a B. S. in chemical engineering from Carnegie-Mellon University and a Ph.D. in operations research from Yale University. He is the author of "Price-Production Decisions with Deterministic Demand" in *Management Science* (July 1970). His present fields of research include operational inventory control methods with seasonal demand, interrelation of production with marketing and finance, and price production decisions with random demand. Professor Thomas is a member of TIMS and ORSA.

Klaus Zoller ("Optimal Disaggregation of Aggregate Production Plans") is Lecturer in

Operations Research and Production Management at the Graduate School of Business Administration, University of the Witwatersrand, Johannesburg, South Africa. He holds a Diplom-Kaufmann in business administration from the University of Göttingen and an M.S. in operations management from the University of California, Los Angeles. Professor Zoller's past research interests included disaggregation (aggregate production planning) and capacitated networks; presently he is studying plant layout planning and related problems. He is a member of the Operations Research Society of South Africa.
