With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

NOTES ABOUT AUTHORS

Emil Attanasi ("Some Interpretations of Sequential Bid Pricing Strategies") is a government economist for the U. S. Geological Survey at the Department of Interior. He holds a B.A. in Mathematics from Evangel College in Springfield, Missouri, and an M.A. and Ph.D. both in Economics from the University of Missouri-Columbia. The co-author of several articles, Dr. Attanasi is a member of the American Economic Association and the Midwest Economic Association.

Yvo M. I. Dirickx is a research fellow at the International Institute of Management in West-Berlin, Germany. Dr. Dirickx obtained an engineering in Quantitative Management from the University of Louvain and received his Ph.D. from Yale University in Operations Research in the Department of Administrative Sciences. Dr. Dirickx's papers appeared in several journals. At present he is interested in sequential decision models and the applications of operations research in urban planning.

Peter C. Fishburn ("Lexicographic Orders, Utilities and Decision Rules: A Survey") is Research Professor of Management Science at Pennsylvania State University. He earned a B.S. in Industrial Engineering from Pennsylvania State University and a Ph.D. in Operations Research from Case Institute of Technology. Professor Fishburn has published several books and is a member of AAAS, the Operations Research Society of America, TIMS, The Econometric Society and the Mathematical Association of America.

John C. Harsanyi ("An Equilibrium-Point Interpretation of Stable Sets and a Proposed Alternative Definition") is Professor of Business of Business Administration and of Economics at the University of California, Berkeley. He holds a Dr. Phil from the University of Budapest (Hungary), M.A. in Economics from the University of Sydney (Australia) and a Ph.D. in Economics from Stanford University. Professor Harsanyi is currently on leave at the University of Bielefeld, West Germany where he is a Visiting Professor.

Arie Hordijk ("Convergence Results and Approximations for Optimal (s, S) Policies") is a research staff member at the Mathematisch Centrum and at the Free University in Amsterdam, Holland. He holds an M.Sc. in Mathematics from the Free University of Amsterdam and a Ph.D. in Mathematics from the University of Amsterdam. Dr. Hordijk's publications have appeared in various journals. Dr. Hordijk is a member of the Institute of Mathematical Statistics, the Netherlands Society for Statistics and Wiskundig Genootschap.

Robert Nauss ("Set Partitioning and Chain Decomposition") is a graduate student at

the Graduate School of Business Administration of the University of California at Los Angeles. He holds a B.S. in Industrial Engineering and Management Science from Northwestern University and an M.S. in Operations Research from Cornell University and was formerly an employee of McDonnell Douglas Corporation.

George L. Nemhauser ("Set Partitioning and Chain Decomposition") is Professor and Acting Chairman of the Department of Operations Research at Cornell University. He earned a B.Ch.E. in Chemical Engineering from the City College of New York, an M.S. in Chemical Engineering and a Ph.D. in Operations Research both from Northwestern University. Professor Nemhauser's work has been published in various journals. He is a member of ORSA, TIMS, SIAM, and the Mathematical Programming Society and is Editor-elect of *Operations Research*.

M. R. Rao ("Networks with Gains in Discrete Dynamic Programming") is Assistant Professor in the Graduate School of Management at the University of Rochester. He received a B.E. in Mechanical Engineering from the University of Madras, an M.E. in Industrial Engineering from Cornell University and a Ph.D. in Industrial Administration from Carnegie-Mellon University. Previous to his present position, Professor Rao was a research Fellow at the International Center for Management Sciences at the University of Louvain, Belgium. His papers have appeared in various professional journals.

Henk Tijms ("Convergence Results and Approximations for Optimal (s, S) Policies") is a research staff member at the Mathematisch Centrum in Amsterdam, Holland. He holds an M.Sc. in Statistics from the University of Amsterdam and a Ph.D. in Mathematics from the same institution. His publications have appeared in various professional journals. His current research interests include inventory and production problems, algorithms in dynamic programming and controlled queueing systems. Dr. Tijms is a member of the Netherlands Society for Statistics, TIMS, and Wiskundig Genootschap.

L. E. Trotter, Jr. ("Set Partitioning and Chain Decomposition") is an Assistant Professor in the Department of Administrative Sciences of Yale University. He holds an A.B. in Mathematics from Princeton University, an M.S. in Operations Research from Georgia Institute of Technology and a Ph.D. in Operations Research from Cornell University. Dr. Trotter's papers have appeared in *Transportation Science* and *J.A.C.M.*
