With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

NOTES ABOUT AUTHORS

Seymour D. Barcun ("Airline Seat Share: A Study in False Optimization") is Associated with Mathematica, Inc. He holds a B.S. from The City University of New York, an M.B.A. and an M.S. from New York University where he studied Operations Research, Statistics, Marketing and Economics. Mr. Barcun is currently a Ph.D. candidate in Business Administration at New York University. Mr. Barcun has held posts as Assistant Professor, Adjunct Professor and Instructor at various colleges. He is currently interested in research in the marketing area. Mr. Barcun is a member of TIMS, ORSA, The American Statistical Association and the American Association of University Professors. He has also been elected to The Scientific Research Society of America, Beta Gamma Sigma and Sigma Pi Delta.

Ingrid Deich ("Antecedents and Consequences of Research Planning in a University Setting") is a Doctoral student in Sociology at the University of Missouri, Columbia. She received an M.A. in History and Germanic Languages from the Free University of Berlin.

A. M. El-Shaieb ("A New Branch and Bound Algorithm for Locating Sources Among Destinations") is an Associate Professor of Business in the Department of Management at the California State University, San Jose. He received a Ph.D. in Engineering in Operations Research from the University of California, Berkeley and an M.S. in Industrial Engineering and Operations Research from the same institution, and a B.S. in Production Engineering from Cairo University, Egypt. Formerly an Assistant Professor at the American University of Cairo, Egypt and consultant to the Arab Research and Administration Center, in Cairo and to the Central Training Organization also in Cairo, Professor El-Shaieb is currently engaged in research concerning business simulation games and branch and bound applications. He is a member of ORSA, the American Institute of Industrial Engineering, and the American Institute of Decision Sciences.

Terry A. Ferrar ("Nonlinear Effluent Charges") is currently serving as a Visiting Assistant Professor of Economics at the University of California—Riverside. Professor Ferrar maintains a permanent joint appointment with the Department of Economics and the Center for Air Environment Studies, both at Penn State University. Professor Ferrar's research has focussed on mathematical modeling of environmental control systems with special emphasis on their information and incentive characteristics. Professor Ferrar is a co-Chairman of the Air Pollution Control Association's Economic Effects Committee.

Dennis Gensch ("An Optimal Budget Allocation Model for Dynamic, Interacting Market Segments") is an Assistant Professor at the Graduate School of Industrial Administration, Carnegie-Mellon University. He received a B.S. in Economics from Marquette University, an M.B.A. in Finance-Marketing from Northwestern University and a Ph.D. in Operations Research Marketing from the same institution. Currently involved in research concerning the application of quantitative techniques to marketing and urban decision systems, Professor Gensch is a winner of the Ford Foundation Fellowship (1966-67), recipient of the Consumer Research Institute Fellowship and wrote the American Marketing Association selected outstanding thesis of 1967-1968.

William F. Glueck ("Antecedents and Consequences of Research Planning in a University Setting") is a Professor of Management and a Faculty Research Professor in the College of Administration and Public Affairs at the University of Missouri, Columbia. He received a B.S. in Philosophy from Xavier University and a Ph.D. in Business Administration from Michigan State University.

Suresh Kumar Goyal ("Determination of Economic Packaging Frequency for Items") is a Lecturer in Operations Research at Glamorgan Polytechnic, in Wales, U. K. He was awarded a B.Sc. in Engineering at Ranchi University (India), a Dip. Tech. Sci. in Production Engineering from the University of Manchester Institute of Science & Technology, and an M.Sc. in Operational Research from the University of Strathclyde. Dr. Goyal has been a Research Fellow in the Department of Operational Research at the University of Strathclyde, a Lecturer at Newcastle-upon-Tyne Polytechnic and an Assistant Maintenance Engineer at Gauhati Refinery in India. He has published articles in Indian, American, British and Danish journals. Application of Operational Research techniques in small companies, comprise his present research interest and in the past his research included application of Operational Research techniques to stock control and maintenance problems. Mr. Goyal is an associate member of the British Institute of Management.

Warren H. Hausman ("Mail-Order Demands for Style Goods: Theory and Data Analysis") is Associate Professor of Management at the Sloan School of Management, Massachusetts Institute of Technology. He received a B.A. in economics from Yale University and a Ph.D. in industrial management from Massachusetts Institute of Technology.

He previously taught at the Graduate School of Business and Public Administration at Cornell University. He is the author of a number of articles in *Management Science* and related journals and coauthor of *Matrix Algebra for Business and Economics* (with S. R. Searle and assistance from H. Bierman, J. E. Hass and L. J. Thomas), John Wiley and Sons, 1970 and *Quantitative Analysis for Business Decisions* (with H. Bierman and C. P. Bonini), Irwin, 1969, Third Edition. Professor Hausman's present research interests involve production planning, inventory control and sequential decision problems. He is a member of TIMS, ORSA and Sigma Xi and an Associate Editor of *Management Science*.

Marvin Hersh ("Allocation Processes with Variable Channel Queues") is a Lecturer at Leon Recanati Graduate School of Business Administration at Tel Aviv University. He received an S.B. and S.M. from the Massachusetts Institute of Technology and an M.S.O.R. and Ph.D. from the University of Southern California. Dr. Hersh is currently interested in research concerning queueing optimization models, airline passenger seat allocation and Blood Bank Optimization. He is a member of TIMS, ORSA, ASEE and Alpha Pi Mu.

Peter Jeming ("Airline Seat Share: A Study in False Optimization") is associated with Hadley Properties in Seattle, Washington. He holds a B.E. in Chemical Engineering from Yale University, an M.S. in Chemical Engineering from the University of Southern California, and an M.B.A. in Operations Research from New York University. Former studies included simulation of the boosters for the Apollo project, computerized acquisition analysis, and dependability and competitive flight load forecasting in the airline industry. He is currently studying the application of quantitative techniques in the construction industry. Mr. Jeming is a member of Sigma Xi, Tau Beta Pi, ORSA and AGIFORS.

Robin Segerblom Liggett ("The Application of an Implicit Enumeration Algorithm to the Desegregation Problem") is a Staff Computer Consultant and Lecturer at the School of Architecture and Urban Planning at the University of California at Los Angeles. She received a B.A. in Mathematics from Pomona College and an M.S. in Operations Research from UCLA. Author of several articles that have appeared in *Environmental Design: Research and Practice* and the *Journal of Computational Physics*, Ms. Liggett is currently interested in research concerning the application of math modeling techniques and in interactive computer graphic techniques to the solution of problems in the fields of Architecture and Urban Planning.

Alexander P. Morgan ("Monotone Experimental Design Algorithm (SMEDAL)") is a graduate student in Mathematics at Yale University. He received a B.S. in Mathematics from the University of Georgia and an M.A. in Mathematics from Yale University. Mr. Morgan is currently working on his Ph.D. dissertation in the theory of foliated manifolds. Sensitivity analysis of computer simulations, abstract models of conflict and combinatorial analysis of decision problems formerly comprised his research interests. Mr. Morgan is a member of the American Mathematical Society and the Mathematical Association of America.

Masao Nakamura ("On a Class of Stochastic Optimization Problems") is an Assistant Professor of Management Science at the University of Alberta, Edmonton in Canada. He received a B.S. and M.S. in Industrial Engineering and Applied Statistics from Keio University in Tokyo and a Ph.D. in Operations Research and Industrial Engineering from the Johns Hopkins University in Baltimore, Maryland. Professor Nakamura's published papers have appeared in *Mathematical Biosciences* and *IEEE Transactions*. The application of operations research to planning problems in the public sector and the optimization and simulation of large-scale stochastic models are Professor Nakamura's present research interests. He is currently engaged in the development of a micro-analytic simulation model of the Canadian household sector. Professor Nakamura is a member of ORSA, TIMS, AIIE, ASA and the Canadian Association of Administrative Sciences.

E. S. Savas ("The Political Properties of Crystalline H₂O: Planning for Snow Emergencies in New York") is Professor of Public Systems Management at the Graduate School of Business at Columbia University. He earned a Ph.D. and M.A. in Chemistry from Columbia and a B.S. and B.A. both from the University of Chicago.

Richard St. George Sides ("Mail-Order Demands for Style Goods: Theory and Data Analysis") is Controller for Hood Sailmakers, Inc. He received a B.A. in Modern History and Political Science from Dublin University, Trinity College, Ireland and an S.M. in Management from Massachusetts Institute of Technology. Mr. Sides is a consultant to Carroll Reed Ski Shops, Inc. for a computerized system of stock control and order-handling. His major preoccupation is forecasting in a framework of uncertainty so as to be able to take rational decisions as an operating manager. The primary tool is to reduce uncertainty to a specific probability function with estimatable parameters that can be shown to fit the observed data; only after the problem has been accurately de-

scribed in a mathematical form should a decision rule be sought.

V. Srinivasan ("Alternate Formulations for Static Multi-Attribute Assignment Models") is an Associate Professor in the Graduate School of Management at the University of Rochester. He graduated in Mechanical Engineering from the Indian Institute of Technology, Madras, India and received an M.S. and Ph.D. in Industrial Administration from Carnegie-Mellon University. Dr. Srinivasan's published works have appeared in Management Science, Operations Research, Naval Research Logistics Quarterly, the Journal of the Association for Computing Machinery and Psychometrika. Dr. Srinivasan is a member of TIMS, ORSA and the American Marketing Association.

Gerald L. Thompson ("Alternate Formulations for State Multi-Attribute Assignment Models") is currently a representative of the Institute of Management Sciences to the Mathematics Division of the National Research

Council. Dr. Thompson holds a Ph.D. in Mathematics from Massachusetts Institute of Technology. Dr. Thompson is the co-author of 9 books and author and co-author of over 60 articles appearing in such journals as International Economics Review, Naval Logistics Quarterly and Industrial Scheduling. Dr. Thompson is a member of the American Mathematical Society, the Mathematical Association of America and the Society for Industrial and Applied Mathematics.

Ulf Peter Welam ("An Optimal Budget Allocation Model for Dynamic, Interacting Market Segments") is a Doctoral candidate at the Graduate School of Industrial Administration at Carnegie-Mellon University. Recipient of a Civilekonom in Business Administration and Economics from Handelshogskolan i Goteborg and an M.S. in Industrial Administration from Carnegie-Mellon University, Mr. Welam is currently interested in research concerning mathematical programming models for marketing and production management and decentralization in the multinational firm.
