With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

NOTES ABOUT AUTHORS

John Buzacott ("The Pit Charging Problem in Steel Production") is an Associate Professor in the Department of Industrial Engineering, University of Toronto. He holds a B.E. degree in electrical engineering from the University of Sidney, Australia, and an M.Sc. and Ph.D. in Operational Research from the University of Birmingham. His current research interests are in developing stochastic models of production systems with emphasis on the effect of different control roles, reliability analysis of systems with in-service repair, and in the application of operational research in hospitals. He is a member of the Canadian Operational Research Society.

John R. Callahan ("The Pit Charging Problem in Steel Production"), is an Assistant Professor in the Faculty of Administrative Studies of the University of Manitoba. He received a B.Sc. in Mathematics and Physics from Carleton University and an M.A. in Applied Mathematics and a Ph.D. in Industrial Engineering from the University of Toronto. His main research interests are the study and control of queuing and production systems, as well as stochastic programming. He is an associate member of the Canadian Operational Research Society and the Operations Research Society of America.

Joe G. Church ("SURE STAF A Computerized Staff Scheduling System for Telephone Business Offices") is a Statistical Analyst for Bell Canada, Montreal. He received a B.A.Sc. and an M.A.Sc. in Engineering Science from the University of Toronto. He has developed and instructed courses in statistics and operations research for the Trans-Canada Telephone System. He works as an in-house consultant in mathematical analysis to client operating departments in Bell Canada.

David W. Conrath ("Communications Environment and its Relationship to Organizational Structure") is an Associate Professor of Management Sciences at the University of Waterloo; he has worked closely with Bell Northern Research on the area of organizational communications. He received his A.B. from Stanford, and M.S. from Carnegie-Mellon and an M.A. and his Ph.D. from the University of California at Berkeley. Mr. Conrath's research interests, in addition to those expressed in his paper, include the study of organizational decision making process and their relationship to formal decision making models. He has published several articles in Management Science, as well as in Behavioral Science, the Journal of Conflict Resolution, and elsewhere.

Gordon Cummer ("Comment: Computer Based Decision Systems and Canadian Man-

agement") holds an M.B.A. from The University of Western Ontario and a B.Sc. in Electrical Engineering from The University of Manitoba. He worked for Canadian General Electric Co. Ltd. for three years and is currently employed by Electrohome Limited, Kitchener.

Donald J. Daly ("On Bridging the Gaps") is a Professor in Managerial Economics in the Faculty of Administrative Studies at York University. He did his undergraduate work in commerce and economics and his M.A. in economics at Queen's University, Kingston, and his Ph.D. in economics at the University of Chicago. He has worked in the Department of Trade and Commerce and with the Economic Council of Canada. His major research interest in recent years has been a study of the factors in the real income differences between Canada and the United States, the area of his paper with Rein Peterson. Topics studied include educational and management differences, and the effects of tariffs. He has published articles in the Journal of Income and Wealth, the Journal of Business and in some of the volumes of the Conference on Research in Income and Wealth.

Michael A. Goldberg ("Simulation, Synthesis, and Urban Public Decision-Making") is Associate Professor in the Urban Land Economics Division of the Faculty of Commerce and Business Administration, University of British Columbia, Vancouver, British Columbia. He received a B.A. in Economics from Brooklyn College, and an M.A. and Ph.D., also in Economics, from the University of California at Berkeley. He is the author of *Intrametropolitan Industrial Location: Plant Size and the Theory of Production*, Technical Report #2, Center for Real Estate and Urban Economics, University of California, Berkeley, 1969, *Jobs, People and Land: The Bay Area Simulation Study (BASS)* (with others), Center for Real Estate and Urban Economics, University of California, Berkeley, 1968, "An Evaluation of the Interaction between Urban Transport and Land Use Systems," in *Land Economics*, Vol. 48, No. 4 (November, 1972), "Ecology and Planning", (with C. S. Holling), in *Journal of the American Institute of Planners*, Vol. 37, No. 4 (July, 1971). His current research interests focus on urban economics and simulation modelling of urban regions. In particular, his present work centers on urban housing models and the development of models which simultaneously treat both the macro and micro levels of aggregation. Widespread use of these models within the political system is a great concern. Professor Goldberg is a member of the American Economic Association and the Regional Science Association.

Andrew Grindlay ("Comment: Computer Based Decision Systems and Canadian Management") is Professor of Business Administration, The University of Western Ontario. He received a B.Sc. in Engineering from the University of Saskatchewan, an M.B.A. from The University of Western Ontario and a Ph.D. from U.C.L.A. He has published in the *Operational Research Quarterly*, *Management Science* and *The Business Quarterly*. He is the President of the Southwestern Ontario Section of the Canadian Operational Research Society.

Boyd M. Harnden ("Forest Fire Detection Systems Design" and "Estimation of Rural Demand for Natural Gas") is Associate Professor in the Faculty of Business Administration and Commerce at the University of Alberta. He received the degree of Geological Engineer from the Colorado School of Mines, and MBA from Northwestern University and Ph.D. in Business Administration from the University of California at Berkeley. His current research is centered around the application of Management Science techniques in organizations.

Hal W. Jackman ("Financing Public Hospitals in Ontario: A Case Study in Rationing of Capital Budgets") is Senior Policy Analyst at the Secretariat for Social Development, Province of Ontario. He holds a B.A.Sc. in Mechanical Engineering, a Diploma in Operational Research, an M.A.Sc. and Ph.D. in Industrial Engineering, all from the University of Toronto. Dr. Jackman has lectured at both the University of Toronto and York University. His current professional interests include the study of decision making in organizations with loosely defined objectives. He is a member of TIMS, ORSA, and AIIE and has served as President of the Toronto Section of the Canadian Operational Research Society.

Christian T. L. Janssen ("Estimation of Rural Demand for Natural Gas") is Associate Dean, Faculty of Business Administration, University of Alberta, Canada. He received a B.A. in economics and an M.B.A. from the University of Gothenburg, and a Ph.D. in business administration from Cornell University. His papers have appeared in *Journal of Industrial Economics*, *Journal of Financial and Quantitative Analysis*, and *Management Science*. He is a member of TIMS, CORS, AIDS, and American Finance Association.

P. Michael Maher ("Forest Fire Detection Systems Design") is Associate Professor and Research Co-ordinator in the Faculty of Business Administration and Commerce at the University of Alberta. He received a bachelor degree in Chemical Engineering from the University of Saskatchewan, an MBA from the University of Western Ontario and a Ph.D. in Management from Northwestern University in Evanston. Research activities

have been focused on the problems of allocating resources within organizations and the social psychological problems involved in using scientific methods and procedures to arrive at optimal allocations. These activities have been financially supported by the National Aeronautics and Space Administration (NASA), the Office of Naval Research (ONR), and the Army Research Office (ARO), through the Army Materiel Command (AMC).

George A. Martin ("Forest Fire Detection Systems Design") received a degree in Chemical Engineering at the University of Alberta in 1964 and an MBA from the same University in 1972. He is currently General Manager of Marvelite Industries, Ltd. in Calgary, Alberta.

Donald B. McCaskill (Comment: Corporate Planning That Works) is President and Chairman of the Executive Committee of Connaught Laboratories Limited and Visiting Professor at the Faculty of Administrative Studies, York University. He is also a director of a group of Canadian companies. Prior to returning to the Canadian business scene Mr. McCaskill was a Vice President of Warner-Lambert Company, President of its Western Hemisphere Group and Chairman of Warner-Lambert Canada Limited. He is a graduate of Princeton University and the Harvard University School of Business Administration. Mr. McCaskill has been active in the field of marketing and management education. At York he teaches Business Policy and Corporate Strategy in the M.B.A. program.

T. B. Nickerson ("A Simulation Model for the Evaluation of Fishing Trawler Designs") vice-president of the Nova Scotia Research Foundation, was previously director of the Operational Research Division. He has developed simulation models of fishing operations in Canada and the U.K. to examine the interaction between vessel design parameters and overall operating economics and to examine the potential of fishing information systems. Mr. Nickerson is an electrical engineer and has an M.Sc. in Operational Research. He is a member of the Association of Professional Engineers of Nova Scotia, the Canadian Operational Research Society, and the Operational Research Society (U.K.).

T. G. O'Flaherty ("A Simulation Model for the Evaluation of Fishing Trawler Designs") obtained a B.S. from Dalhousie University and a B.Eng. (mechanical) from Nova Scotia Technical College. He was awarded an Athlone Fellowship for study in England, and he earned an M.S. in operational research from Birmingham University in 1967. Mr. O'Flaherty then joined the Operational Research division of the Nova Scotia Research Foundation. In 1971 he was appointed Director of this division. Early in 1973 he joined Xerox of Canada in

Halifax. Mr. O'Flaherty is a member of the Association of Professional Engineers of Nova Scotia (serving on the Board of Examiners since 1971), the Canadian Operational Research Society (presently serving as an elected member on the National Council) and the Operational Research Society (UK). He has published several articles in the *CORS Journal* and *INFOR*.

Edward R. Petersen ("A Dynamic Programming Model for the Expansion of Electric Power Systems") is Associate Professor in the School of Business at Queen's University, Kingston, Ontario, Canada. He received a B.Sc. in Engineering Physics from the University of Alberta, a M.S. in Electrical Engineering from Caltech, and a Ph.D. in Electrical Engineering from Stanford University. While at Stanford University, he was associated with the Institute of Engineering-Economic Systems. In the past, Dr. Petersen's research has included the development of an Energy Planning Model for Canada. He is currently engaged in developing a Canadian Freight Transport Model. He is a member of CORS, TIMS, and ORSA.

Rein Peterson ("On Bridging the Gaps") is on the Faculty of Administrative Studies at York University. He received his B.Eng. from McGill University, an M.B.A. from the University of Western Ontario and a Ph.D. from Cornell University. His current research interests include the study of decision making practices used by Canadian firms especially as they are related to the use of Management Science methodologies. His previous articles have appeared in such journals as *Management Science*, *INFOR* and *The Business Quarterly*. He is currently coauthoring a book with E. A. Silver on *Decision Systems for Inventory Management and Production Planning*, John Wiley, 1975. He was the founding president of the Southern Ontario chapter of T.I.M.S. (SOTIMS) and is a member of C.O.R.S.

D. W. Rice ("A Simulation Model for the Evaluation of Fishing Trawler Designs") is Director of the Operational Research Division of the Nova Scotia Research Foundation in Dartmouth, Nova Scotia. He holds a B.Eng. and an M.Eng. in Industrial Engineering from the Nova Scotia Technical College. He has worked primarily with simulation modelling and the application of statistical methods for the past three years. He has taught statistics at Saint Mary's University, lectured on O.R. projects at N.S.T.C., and has presented a paper on the subject of this article at the C.O.R.S. Conference and the NRC Technical Information Service Conference. Mr. Rice is a member of the Association of Professional Engineers of Nova Scotia, the Canadian Operational Research Society, and the Institute of Management Sciences.

Charlotte Seaberg ("Computer based Decision Systems in Xerox Corporate Planning") is a consultant at I. P. Sharp Associates Limited. She holds a B.A. in Experimental Psychology from the University of California, Los Angeles, and has done past graduate work in psychology at California State College and in statistics and computer science at the University of Southern California. She has considerable experience in the development of corporate planning models and business simulation and forecasting systems.

Ronald A. Seaberg ("Computer Based Decision Systems in Xerox Corporate Planning") is manager, Financial Planning and Analysis, Xerox of Canada Limited. He received his B.A. in accounting from the University of Washington and an M.B.A. from the University of Southern California where he also completed work in economics and operations research toward a D.B.A. He has had considerable experience in applying time-shared models to business management problems both in the U. S. and Canada.

Cary Swoveland ("Ambulance Location: A Probabilistic Enumeration Approach") is an Assistant Professor in the Management Science Division of the Faculty of Commerce and Business Administration at the University of British Columbia. He holds a B.S. in Agricultural Economics from the University of California, Berkeley and a Ph.D. in Operations Research from the University of California, Los Angeles. His research interests are in exact and non-exact methods for solving large-scale math programming problems, particularly those having a combinatorial structure.

Anthony C. Taylor ("A Planning Model For a Water Quality Management Agency") is a senior consultant at Systems Research Group Inc. where he specializes in the provision of management systems for the public sector. He graduated from Queen's University at Kingston in Engineering Physics and holds a masters degree in Industrial Engineering from the University of Toronto and the doctor of philosophy from the Sloan School of Management at M.I.T. While at M.I.T., he was editor of the *Industrial Management Review*, Cambridge, and worked as consultant to the First National Bank of Boston. Mr. Taylor has taught graduate courses in statistics and applied mathematics at York University and the University of Guelph.

Seha M. Tinic ("Estimation of Rural Demand for Natural Gas") is Associate Professor at the Faculty of Business Administration and Commerce, University of Alberta. He received a B.A. in Industrial Management from Bosphorus University (Robert College) in Istanbul, Turkey, an M.B.A. from Uni-

versity of Tulsa and a Ph.D. in Managerial Economics from Cornell University. His papers have appeared in *Quarterly Journal of Economics*, *Journal of Financial and Quantitative Analysis*, *Journal of Finance*, *Public Policy*, *Bell Journal of Economics and Management Science*. Professor Tinic is also the co-author of one book: *The Economics of the Stock Market*, Praeger Publishers, 1971. His present research interests involve determination of allocational efficiency of financial markets and stochastic optimization models. Professor Tinic is a member of TIMS, American Economic Association, Canadian Economic Association, American Finance Association and Phi Kappa Phi.

Dean H. Uyeno ("Ambulance Location: A Probabilistic Enumeration Approach") is an Assistant Professor in the Management Science Division of the Faculty of Commerce and Business Administration at the University of British Columbia. He holds a B.S.M.E. and an M.S.E. from the University of Washington in Seattle and a Ph.D. in Industrial Engineering and Management Science from Northwestern University. His current research interests lie in simulation optimization, fisheries, hospital admissions systems, and modes of medical decision-making. The areas in which he is most interested in applications work at the present time include ecology and public systems, particularly health care delivery systems.

Ilan Vertinsky ("Ambulance Location: A Probabilistic Enumeration Approach") is

Assistant Professor of Management Science and Resource Ecology as well as co-ordinator of the Health Systems Group at the University of British Columbia. He received his Ph.D. from the University of California at Berkeley in Business Administration. He taught in the Graduate School of Management at Northwestern University and served as a consultant to a regional health planning project in Colombia, S. A. His publications have appeared in various journals including *Management Science*, *Journal of Marketing*, *Socio-Economic Planning Sciences* and *Land-Economics* and the *American Behavioral Scientist*.

Raymond G. Vickson ("Ambulance Location: a Probabilistic Enumeration Approach") is a Killam Postdoctoral Teaching Fellow in the Division of Management Science, Faculty of Commerce and Business Administration, University of British Columbia. He holds a B.Sc. degree in Physics and Mathematics from the University of British Columbia, and a Ph.D. in Theoretical Physics from the Massachusetts Institute of Technology. He did postdoctoral work in theoretical elementary particle and theoretical high energy nuclear physics, and has published papers in *Physical Review* and *Nuclear Physics B*. Recently he moved into the ORMS area, and is presently working on problems of statistical decision theory, quantitative finance, and health applications of operations research. He is a member of the American Physical Society and TIMS.
