With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

NOTES ABOUT AUTHORS

K. R. Balachandran ("Solving the 'Marketing Mix' Problem Using Geometric Programming") is Assistant Professor in the School of Business Administration of the University of Wisconsin. He received a B.E. (with Honors) in mechanical engineering from the University of Madras, and an M.S. and a Ph.D. in operations research from the University of California, Berkeley. Professor Balachandran is presently doing research in optimization in queues and forecasting enrollment in school and courses; in the past he studied queueing theory and nonlinear programming. He is a member of TIMS and an Associate Member of ORSA.

R. Brooks-Hill ("Calculation of Investment Portfolios with Risk Free Borrowing and Lending") is an Assistant Professor of the Faculty of Commerce at the University of British Columbia as well as Portfolio Manager for Phillips Hager & North Ltd. He holds a Ph.D. in Applied Economics from the University of Pennsylvania and a B.A. in Business Administration from the University of Western Ontario. Professor Brooks-Hill is a member of the American Finance Association.

Dennis Gensch ("Solving the 'Marketing Mix' Problem Using Geometric Programming") is an Assistant Professor at the Graduate School of Industrial Administration, Carnegie-Mellon University. He received a B.S. in Economics from Marquette University, an M.B.A. in Finance-Marketing from Northwestern University and a Ph.D. in Operations Research Marketing from the same institution. Currently involved in research concerning the application of quantitative techniques to marketing and urban decision systems, Professor Gensch is a winner of the Ford Foundation Fellowship (1966-67), recipient of the Consumer Research Institute Fellowship and wrote the American Marketing Association selected outstanding thesis of 1967-1968.

William F. Hamilton ("A Computer-Based Corporate Planning System") is an Associate Professor and Community Medicine Director of the Leonard Davis Institute of Health Economics at the University of Pennsylvania. He earned a B.S. and M.S. in Chemical Engineering both from the University of Pennsylvania, an M.B.A. in Management-Operations Research from the Wharton School and a Ph.D. in Applied Economics from the London School of Economics. He has published about a dozen papers on various topics and is currently a member of ORSA, TIMS, the Society for Management Information Systems and the Operational Research Society (U.K.).

Richard A. Kaimann ("Coefficient of Network Complexity") holds a B.S. degree in Management Engineering from Rensselaer Polytechnic Institute, the M.B.A. degree from Marquette University, and the Ph.D. degree from the University of Iowa. Currently, a Professor in Operations Management at Marquette, he is also a consultant to numerous public and private organizations specializing in computer systems, project management and their operational impact on the top management process. He further maintains an equity position in a professional search enterprise. He has previously served as a senior systems analyst in operations research at the Allis-Chalmers Mfg. Co., Director of the Educational Data Processing Research Project at Marquette, and as a research associate with the Iowa Educational Information Center. He is the author of some 75 professional and research articles and author of two books.

P. Michael Maher ("Factors Affecting Adoption of a Quantitative Method for R&D Project Selection") is an Associate Professor of Business Administration/Commerce at the University of Alberta, Canada. A member of TIMS and of the Association of Professional Engineers, Professor Maher earned a B.E. in Chemical Engineering from the University of Saskatchewan, an M.B.A. from the University of Western Ontario and a Ph.D. in Management from the School of Management at Northwestern University.

Michael Moses ("A Computer-Based Corporate Planning System") is an Assistant Professor of Management at New York University's Graduate School of Business. He earned a B.S. in Mathematics from Worcester Polytechnic Institute, and an M.S. and Ph.D. in Management Science from Northwestern University. His publications have appeared in several journals and he is a member of TIMS and ORSA.

Celik Parkan ("Calculation of Investment Portfolios with Risk Free Borrowing and Lending") is a Ph.D. student in Management Science at the University of British Columbia. He holds a B.S. and M.S. in Mechanical Engineering from the Technical University of Istanbul, Turkey and an M.S. in Operations Research from the University of Pennsylvania. Mr. Parkan has authored and co-authored several working papers and has worked for the National Coal Board of England.

Gordon Pye ("Optimal Foreclosure Policies") is an Economic Consultant holding a Ph.D. in Economics and a B.S. in Chemical Engineering both from Massachusetts Insti-

tute of Technology. Dr. Pye has published over 20 papers in 12 different journals and is a member of the American Economic Association and the National Association of Business Economists. He is also Associate Editor of Financial Analysts Journal.

David Robinson ("Two-Stage Replacement Strategies and Their Application to Manpower Planning") is a Research Statistician at the Medical Centre in London, England. A Fellow of the Royal Statistical Society, Mr. Robinson is the author and co-author of several articles. Mr. Robinson received his education at the University of London (B.Sc. in Mathematics) and at the University of Kent (M.Sc. in Statistics).

Albert H. Rubenstein ("Factors Affecting Adoption of a Quantitative Method for R&D Project Selection") has his B.S. from Lehigh and his M.S. and Ph.D. from Columbia, all in Industrial Engineering. He was on the Industrial Engineering staff at Columbia from 1950-53 and on the faculty of the School of Industrial Management at M.I.T. from 1953-59. Since 1959 he has been Professor of Industrial Engineering and Management Sciences at Northwestern University, where he established and heads the Organization Theory area and the Program of Research on the Management of Research and Development.

He is Director of Studies for the College of Research and Development (COLRAD) and has served as Vice President of Research and Education of the Institute of Management Sciences; a contributing reviewer to *International Abstracts in Operations Research*; and a member of the Advisory Committee on Economic and Manpower Studies of the National Science Foundation. He is also a Director of two companies and consultant to a number of industrial and government organizations in the areas of R and D management and long range techno-economic planning.

Ralph David Snyder ("Computation of (S, s) Ordering Policy Parameters") is Lecturer in the Department of Econometrics and Operations Research at Monash University in Clayton, Victoria, Australia. He holds Bachelor's and Master's degrees of economics from Monash University and a Ph.D. in operations research from Birmingham University. In the past, Dr. Snyder was a teaching fellow at Monash University and a research associate at University of Birmingham. Location of depots, the theory of the firm and econometrics were his past research interests. He is currently

doing research in stock control. Dr. Snyder is a member of the Australian Society for Operations Research.

Ralph W. Swain ("A Parametric Decomposition Approach for the Solution of Un-capacitated Location Problems") is an Assistant Professor in the Department of Industrial and Systems Engineering at the Ohio State University. He holds a B.E.S. in Mechanics from Johns Hopkins University, and an M.S. and Ph.D. both in Environmental Systems Engineering from Cornell University. Professor Swain has authored and co-authored more than 6 articles that have appeared in various journals. Professor Swain is a member of AAAS and an Associate Member of ORSA.

E. Burton Swanson ("Management Information Systems: Appreciation and Involvement") is a visiting scientist with the Studien-gruppe für Systemforschung, Heidelberg, Germany. He holds a B.S. in Industrial Engineering from San Jose State College, an M.B.A. in Quantitative Methods from the University of Michigan and a Ph.D. in Business Administration from the University of California at Berkeley. Dr. Swanson has taught at both California State University at San Jose and at Hayward and is currently interested in research concerning information system design methodology and the development of an information system typology. He is a member of TIMS and the Society for General Systems Research.

Ahmet Tezel ("Optimal Foreclosure Policies") is an Assistant Professor of Economics at The City College of the City of New York. He holds a B.A. in Accounting from the Academy of Commerce and Economics in Istanbul, Turkey, an M.B.A. and Ph.D. both in Finance from the University of California, Berkeley. Professor Tezel is a member of the American Finance Association and the American Economic Association.

Charles B. Weinberg ("The University Library: Analysis and Proposals") is an Assistant Professor of Marketing at Stanford University's Graduate School of Business. He earned a B.S. in Applied Mathematics from Brown University, an M.B.A. from Harvard University and a Ph.D. in Business from Columbia University. Author and co-author of several articles, Professor Weinberg is a member of TIMS and the American Marketing Association.
