With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

NOTES ABOUT AUTHORS

Joseph D. Blackburn ("Planning Horizons for the Dynamic Lot Size Model with Backlogging") is Assistant Professor in the Graduate School of Business at the University of Chicago. During the 1972-1973 academic year he will be on leave as a Visiting Assistant Professor in the Graduate School of Business, Stanford University. He received a B.S. in chemical engineering from Vanderbilt University, an M.S. in chemical engineering from the University of Wisconsin and a Ph.D. in operations research from Stanford University.

Roger A. Blau ("Stochastic Programming and Decision Analysis: An Apparent Dilemma") is an Assistant Professor at the School of Business Administration and is a member of the curriculum in Operations Research and Systems Analysis at the University of North Carolina. He holds a B.S. in Mathematics from Carnegie Institute of Technology and an M.S. and Ph.D. in Statistics from the same institution. He is a member of TIMS, ORSA, and Sigma XI.

Cyrus Derman ("Optimal Allocations in the Construction of k -out-of- n Reliability Systems") is Professor of Operations Research in the Division of Mathematical Methods and Operations Research at Columbia University. He received an A.B. and an A.M. in mathematics from the University of Pennsylvania and a Ph.D. in mathematical statistics from Columbia University. Prior to joining the faculty at Columbia, Professor Derman was an Instructor in Mathematics at Syracuse University. He has also been a Visiting Professor in Industrial and Management Engineering at the Israel Institute of Technology and a Visiting Professor in Operations Research at Stanford University. He is the author of a number of papers in the fields of probability theory, statistical inference and operations research as well as three books. Professor Derman is a Fellow of the Institute of Mathematical Statistics and a Fellow of the American Statistical Association.

S. D. Deshmukh ("Computational Delays") is an Assistant Professor of Decision Sciences at the Graduate School of Management at Northwestern University. He holds a B.E. in Mechanical Engineering from Poona University, India, an M.S.I.E. in Industrial Engineering from Purdue University and a Ph.D. in Business Administration from the University of California, Berkeley. He is a member of TIMS and ORSA.

Donald Erlenkotter ("A Dynamic Programming Approach to Capacity Expansion with Specialization") is Associate Professor of Planning and Decision Sciences and Vice-Chairman of the Graduate School of Management, University of California, Los Angeles. He

received a B.C.E. in civil engineering from the Georgia Institute of Technology, and an M.B.A., an M.S. in statistics, and a Ph.D. in business from Stanford University. He served from 1966 to 1969 as a Capital Projects Analyst with the Agency for International Development in New Delhi, India. Professor Erlenkotter is the author of a number of papers in various journals. His memberships include TIMS, ORSA, the Operational Research Society of India, the Econometric Society, and the American Economic Association. He also serves as a member of the Editorial Board of the journal *Socioeconomic Planning Sciences*.

Stephen M. Howe ("A Penalty Function Procedure for Sensitivity Analysis of Concave Programs") is Assistant Professor in the Department of Mathematics at Rensselaer Polytechnic Institute. He holds a B.S. in mathematics from Davidson College and a Ph.D. in operations research and systems analysis from the University of North Carolina. Professor Howe is a member of ORSA and The Mathematical Programming Society.

Hiroyuki Itami ("Expected Objective Value of a Stochastic Linear Program and the Degree of Uncertainty of Parameters") is Lecturer of Business Administration in the Department of Commerce in Hitotsubashi University (Tokyo). Dr. Itami, who has written for the *Accounting Review* and several Japanese journals, received degrees from Hitotsubashi University (bachelor's of commerce and master's of commerce) and earned both a M.S. and a Ph.D. in Industrial Engineering from Carnegie-Mellon University. He is a member of TIMS, the American Accounting Association, the Japan Society for the Study of Business Administration, the Japanese Accounting Association, and the Operations Research Society of Japan.

Joseph B. Keller ("Optimum Checking Schedules for Systems Subject to Random Failure") is Professor of Mathematics at the Courant Institute of Mathematics of the New York University. Previously he held positions as Chairman of the Department of Mathematics at New York University and Head of the Mathematics Branch of the Office of Naval Research. Professor Keller is a member of the National Academy of Sciences, the American Mathematical Society, the American Physical Society, and the Society for Industrial and Applied Mathematics.

Howard Kunreuther ("Planning Horizons for the Dynamic Lot Size Model with Backlogging") is Associate Professor at the Wharton School, University of Pennsylvania. He received an A.B. in Economics from Bates College and a Ph.D. in Economics from Massachusetts Institute of Technology. He has written widely

in the areas of deterministic inventory theory and production and employment smoothing. His book, *The Economics of Natural Disasters: Implications for Federal Policy* (co-authored with Douglas Dacy) (Free Press, 1969) won the 1971 Elizur Wright Award for "the publication that makes the most significant contribution to the literature of insurance". Professor Kunreuther is a member of TIMS and the American Economic Association.

Robert Alan Leitch ("Marketing Strategy and the Optimal Production Schedule") is Assistant Professor in the Department of Accounting and Business Law at the University of Georgia. He received his B.C.E. in civil engineering from Cornell University, his M.S. in industrial administration from Carnegie-Mellon University and his Ph.D. in management science from the University of Tennessee. Professor Leitch is a member of TIMS, American Institute of Certified Public Accountants, and American Accounting Association.

Mark R. Lembersky ("Preferred Rules in Continuous Time Markov Decision Process" and "A Counterexample in Continuous Markov Decision Chains") is an Assistant Professor in the Department of Statistics at Oregon State University. He holds an S.B. in Electrical Engineering from M.I.T., an M.S. in operations research and a Ph.D. in operations research both from Stanford University. Professor Lembersky is a member of TIMS and ORSA and a lecturer in the ORSA/TIMS Visiting Lecturers Program.

Gerald J. Lieberman ("Optimal Allocation in the Construction of k-out-of-n Reliability Systems") is Professor of Statistics and Operations Research and Chairman of the Department of Operations Research at Stanford University. He received a B.M.E. Professor Lieberman is a Fellow of the American Statistical Association, the Institute of Mathematical Statistics, American Society for Quality Control and AAAS. He is a member of The Institute of Management Sciences, ORSA, International Statistical Institute and International Association for Statistics in Physical Sciences. Professor Lieberman was the 1972 recipient of the Shewhart Medal of the American Society for Quality Control. He is also a member of the Council of The Institute of Management Science.

Edmund H. Mantell ("A Statistical Estimator in a Problem of Stochastic Dominance") is an Economist for the John Hancock Mutual Life Insurance Company, Boston, Massachusetts. He holds a B.A. in Economics from the State University of New York at Oneonta and a Ph.D. in Economics from the University

of Pennsylvania. He is a member of the American Economic Association.

J. Gaylord May ("A Linear Program for Economic Lot Sizes Using Labor Priorities") has published twelve technical articles relating to his current and past research activities. He earned a B.S. in Mathematics from Wofford College, an M.A. and Ph.D. in Mathematics from the University of Virginia. Currently an Associate Professor of Mathematics at Wake Forest University, Professor May is a member of the Mathematical Association of America.

Bruce L. Miller ("Dispatching from Depot Repair in a Recoverable Item Inventory System: On the Optimality of Heuristic Rule") is an Associate Professor at the University of California, Los Angeles' Department of Engineering Systems. He is a member of TIMS and an Associate Editor of *Management Science*. Professor Miller holds an M.S. in Statistics and a Ph.D. in Operations Research both from Stanford University. He was awarded a B.S. in Physical Science from Oklahoma State University.

David W. Pentico ("The Assortment Problem with Probabilistic Demands") is a member of TIMS and ORSA and holds an A.B. in Applied Mathematics from Dartmouth College, an M.S. and Ph.D. in Industrial Administration from Carnegie-Mellon. He is currently an Assistant Professor in the University of Pittsburgh's Graduate School of Business.

Robert W. Rosenthal ("Bayesian Equilibria of Finite Two-Person Games with Incomplete Information") holds a B.A. in political economy from Johns Hopkins University, and an M.S. and Ph.D. both in Operations Research and both from Stanford University. He is currently an Assistant Professor in the Department of Industrial Engineering and Management Sciences at Northwestern University.

Harold Sackrowitz ("Inspection Procedures for Markov Chains") is an Associate Professor of Applied and Mathematical Statistics at Rutgers University. He holds a B.S. in Mathematics from Brooklyn College and a Ph.D. in Mathematical Statistics from Columbia University. Professor Sackrowitz is a member of the Institute of Mathematical Statistics and the American Statistical Association.

Ester Samuel-Cahn ("Inspection Procedures for Markov Chains") is a Professor in the Statistics Department of Hebrew University. She holds a B.A. in Mathematics from Hebrew University and a M.A. and Ph.D. in Mathematical Statistics from Columbia University. She is a member of the Institute of Mathematical Statistics.
