With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

NOTES ABOUT AUTHORS

Carole A. Aldrich ("Optimal Founding Paths for a Class of Risky R & D Projects") is Assistant Professor of Business Administration at Duke University. She received her M.S.I.A. (1967) and Ph.D. in economics (1972) from Carnegie-Mellon University. Recent publications have appeared in the *Journal of Finance* and *Quantitative Analysis*, 1973 Proceedings of Northeast AIDS and, with T. Morton, the *Journal of the American Statistical Association*. Her current research area is the study of learning in stochastic control systems.

J. M. Blin ("Discriminant Functions and Majority Voting") is Associate Professor of Managerial Economics and Decision Sciences at Northwestern University Graduate School of Management. He received an M.S. and a Ph.D. in Economics from Purdue University. He has published a book (*Patterns and Configurations in Economic Science*, D. Reidel Publishing Co., Dordrecht, Holland 1973) and numerous articles some of which have appeared in such journals as *Management Science*, *Review of Economic Studies*, *Theory and Decision*, and *Kyklos*.

Yvo M. I. Dirickx ("Deterministic Discrete Dynamic Programming: Structure of Optimal Policies") is a research fellow at the International Institute of Management in Berlin, Germany. Dr. Dirickx obtained an engineering degree in Quantitative Management from the University of Louvain and received his Ph.D. from Yale University in Operations Research. Dr. Dirickx's papers appeared or are forthcoming in *SIAM Journal on Applied Mathematics*, *IEEE Transactions*, *Management Science*, *Transportation Research* and *Zeitschrift für Operations Research*. Dr. Dirickx is a member of TIMS, ORSA, and Sigma Xi.

Richard A. Dudek ("Flowshop Sequencing Problems with Ordered Processing Time Matrices") is Horn Professor and Chairman of the Department of Industrial Engineering at Texas Tech University. He received a B.S.M.E. from the University of Nebraska and an M.S.I.E. and Ph.D. from the State University of Iowa. He has published widely with research interests in sequencing, management systems, and biotechnology.

John S. Fryer ("Configurational Effects in Labor and Machine Limited Production Systems") is an Associate Professor of Management at the University of South Carolina's College of Business Administration. He earned a B.S. in Electrical Engineering from the University of Evansville, and an M.B.A. and

D.B.A., both in Production Management, from Indiana University. Professor Fryer is a member of The Institute of Management Sciences, the Operations Research Society of America, the Academy of Management and the American Institute for Decision Sciences.

Tomas Gal ("Rim Multiparametric Linear Programming") is Professor of Operations Research in the Department of Operations Research at Technische Hochschule Aachen, West Germany. He holds a Docent and a Ph.D. in operations research from the Agricultural University, Prague, and a Ph.D. in physical chemistry from Charles University, Prague. In the past, Dr. Gal was a Research Fellow at the Institute for Cardiovascular Diseases, Prague, an Assistant Professor in the Department of Mathematics, Agricultural University, Associate Professor in the Department of Operations Research, Agricultural University, and ICMS Research Fellow at the Center for Operations Research and Econometrics, Catholic University, Louvain. He is the author of five books in mathematics and operations research, a number of papers on linear algebra, linear programming and operations research in Czech, German and US journals and three CORE discussion papers, and three discussion papers of the Department of Operations Research at the University of Aachen.

L. Peter Jennergren ("Deterministic Discrete Dynamic Programming: Structure of Optimal Policies") holds an undergraduate degree from the Stockholm School of Economics and a Ph.D. from the Graduate School of Business, Stanford University. He is currently a Research Engineer with The Research Group for Planning Theory (FOA/KTH), Mathematics Department, Royal Institute of Technology, Stockholm. His publications have appeared in various journals, including *Econometrica*, *IEEE Transactions on Systems, Man, and Cybernetics*, and *Swedish Journal of Economics*.

Basil A. Kalymon ("An Optimization Algorithm for a Linear Model of a Simulation System") is Visiting Associate Professor at Harvard University's Graduate School of Business Administration. He holds a B.S. in mathematics and statistics from the University of Toronto and a Ph.D. in Operations Research from Yale University. His publications have appeared in various professional journals. Professor Kalymon is a member of TIMS, ORSA, and CORS.

Stephen S. Lavenberg ("The Steady-State Queueing Time Distribution for the M/G/1 Finite Capacity Queue") is on the Research Staff of IBM's San Jose Research Laboratory.

He earned a B.S.E.E. from Rensselaer Polytechnic Institute, an M.S. and Ph.D. in Electrical Engineering both from the California Institute of Technology. Several of Dr. Lavenberg's articles have appeared in IEEE Transactions. Dr. Lavenberg is a member of IEEE, and ACM.

Stephen H. Lubore ("Finding the N Most Vital Links in Flow Networks") holds a Ph.D. in Operations Research and an M.S. in Management Science both from The Johns Hopkins University; he earned a B.S. in Electrical Engineering from the University of Maryland. Dr. Lubore is interested in environmental science and energy related problems and is a member of ORSA.

Thomas E. Morton ("Optimal Finding Paths for a Class of Risky R & D Projects") has published papers in numerous professional journals. Professor Morton is Associate Professor of Industrial Administration at Carnegie-Mellon University, and a member of TIMS and ORSA.

S. S. Panwalkar ("Flowshop Sequencing Problem with Ordered Processing Time Matrices") teaches Industrial Engineering and Statistics as an Assistant Professor at Texas Tech. University. He received an M.E. and Ph.D. in Industrial Engineering from the University of Oklahoma. Professor Panwalkar was a Visiting Assistant Professor of Industrial Engineering at the University of Oklahoma, Norman. Professor Panwalkar is a member of ORSA and AIIE.

Dov Pekelman ("Production Smoothing with Fluctuating Price") is Associate Professor at the Wharton School. He received a Ph.D. in Management Science from the University of Chicago's School of Business. He also holds degrees from Stanford University, Hebrew University, and the Technion-Haifa. A member of the American Marketing Association, Professor Pekelman is chairman of the Economic Systems Technical Committee of the IEEE Control Systems Society and Departmental Editor of *IEEE Transactions on Control for Management and Economics*.

H. Donald Ratliff ("Finding the N Most Vital Links in Flow Networks") is Associate Professor of Industrial and Systems Engineering at the University of Florida. He earned a

B.S. and M.S. both in Industrial Engineering and both from the University of Alabama as well as a Ph.D. in Operations Research from the Johns Hopkins University. Professor Ratliff has published articles in several professional journals and is a member of Phi Beta Kappa, TIMS and ORSA.

Linus Schrage ("Minimizing the Time-In-System Variance for a Finite Jobset") is Associate Professor of Applied Mathematics and Production Management, Graduate School of Business, University of Chicago. He received a B.S. in Industrial Engineering from St. Louis University and an M.S. and Ph.D. in Operations Research from Cornell University. He is the author of papers in scheduling, queueing theory, integer programming, inventory theory, court management and simulation which have appeared in various journals. Professor Schrage is a member of TIMS, ORSA, and ACM and is an associate editor for *Management Science* and the *Journal of ACM*.

G. Thomas Sicilia ("Finding the n Most Vital Links in a Flow Network") holds a Ph.D. from the University of Florida and a B.E.S. from Johns Hopkins University both in Operations Research. Dr. Sicilia is currently an OR Analyst with the Office of the Secretary of Defense (Deputy Assistant Secretary of Defense for Manpower and Reserve Affairs). He is a member of TIMS, ORSA, and the Washington O.R. Council.

Milton Smith ("Flowshop Sequencing Problems with Ordered Processing Time Matrices") is an Associate Professor of Industrial Engineering and Computer Science at Texas Tech University, where he received the doctoral degree in 1968. His research activities include several aspects of job sequencing, development and evaluation of cotton processing systems, and modeling of regional economic systems.

Andrew Whinston ("Discriminant Functions and Majority Voting") is Professor of Economics, Industrial Management, and Computer Science at Purdue University. He received his Ph.D. in 1962 from Carnegie Mellon University and served on the faculties of Yale and the University of Virginia. He is an Associate Editor of *Management Science* and a member of the editorial board of *Discrete Mathematics*.
