With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

NOTES ABOUT AUTHORS

Hans U. Baurmeister ("A Computational Algorithm for Multi-Contract Bidding under Constraints") is Director of Materials of the Exide Power Systems Division of ESB, Inc., Philadelphia. He received a Dipl. Ing. in mechanical engineering and a Dipl. Wirtschftsing. from the Technical University of Munich and a M.S. in operations research from the University of Pennsylvania. He has done extensive applied work in the area of manufacturing, and he is a member of TIMS and APICS.

James A. Bonnardeaux ("The Use of the Nash Bargaining Model in Trajectory Selection") is Credit Administrator at Bank of America European Division Headquarters in London. After completing his secondary education in Belgium and England, he earned an M.A. in economics from the University of Madrid, Spain, and an M.B.A. in business administration from the University of California at Los Angeles. He is presently investigating the development of a model on foreign exchange rates.

Alexandre Brandwajn ("Control Schemes in Queueing Networks") is a researcher in Computer Science at Institut de Recherche d'Informatique et d'Automatique (France). He holds an Ingénieur Civil degree from the Ecole Nationale Supérieure des Télécommunications, Paris, a Docteur-Ingénieur and a Docteur d'Etat degree in Computer Science from the University of Paris VI. He is the author of several papers in professional journals and a member of ACM.

Albert W. Chan ("A Least Total Distance Facility Configuration Problem Involving Lattice Points") is Visiting Associate Professor of Computer Science and Operations Research at the University of Alabama. He holds the B. Math from the University of Minnesota, and the M.S. and Ph.D. in industrial and systems engineering from the University of Florida. He is a member of TIMS and ORSA.

Jean-Pierre Dolait ("The Use of the Nash Bargaining Model in Trajectory Selection") is Professor Adjoint of Operations Management in the Faculté des Sciences de l'Administration at Laval University, Quebec, Canada. He holds a B.S. in mathematical engineering from the Ecole Nationale Supérieure d'Arts et Métiers of Paris, an M.S. in aeronautics and an Aeronautical Engineer degree from the California Institute of Technology, and an M.B.A. in business administration from the University of California at Los Angeles.

James S. Dyer ("The Use of the Nash Bargaining Model in Trajectory Selection") is an Associate Professor of Management Science at the Graduate School of Management of the University of California, Los Angeles. He has served as a consultant to the

RAND Corporation, The Jet Propulsion Laboratory and the National Center for Higher Education Management Systems. Professor Dyer's previous papers have appeared in numerous professional journals. He is currently interested in the interface between mathematical programming and utility theory, with special emphasis on man-machine interactive problem-solving strategies. He is also the co-author (with E. S. Buffa) of *An Introduction to Management Science/Operations Research*, to be published by the Wiley-Hamilton Press in 1976.

Richard L. Francis ("A Least Total Distance Facility Configuration Problem Involving Lattice Points") is a Professor in the Department of Industrial and Systems Engineering at the University of Florida. He holds the B.S., M.S. and Ph.D. degrees, granted respectively from Virginia Polytechnic Institute, Georgia Institute of Technology and Northwestern University. His research interests include facility design, location theory and the application of optimization theory; he has authored and co-authored a number of journal papers, and is co-author with John A. White of the book *Facility Layout and Location: An Analytical Approach*. He is an Associate Editor of *Operations Research*, a Senior Editor of *Operations Research*, and was Program Chairman of the 1974 ORSA/TIMS Puerto Rico Meeting.

David Goodman ("A Computation Algorithm for Multi-Contract Bidding under Constraints") is currently an Associate Professor of Management Science and Computers in the School of Business at Southern Methodist University. He received his Ph.D. in operations analysis from Yale University. He has recently published articles on production scheduling and is currently involved in research in the area of transpersonal psychology.

E. G. P. Haran ("A Comprehensive Planning Model for Long-Range Academic Strategies") is a doctoral student at the School of Urban and Public Affairs, Carnegie-Mellon University. He is a recipient of a U.S. Fulbright Travel Grant. He received a B.Sc. and an M.S. (with honors) in statistics from the University of Madras, India. Later this year he plans to join the faculty of the Indian Institute of Management at Bangalore, India. His articles have appeared in the *Journal of Regional Science* and *Geographical Analysis*. He is a member of TIMS.

Janet Louise Mangold ("A Comprehensive Planning Model for Long-Range Academic Strategies") received her education at the Massachusetts Institute of Technology and Carnegie-Mellon University. She is now on the staff of E. R. Munro & Co., Pittsburgh, Pennsylvania.

Stylianos Perrakis ("On Risky Investments with Random Timing of Cash Returns and Fixed Planning Horizon") is an Associate Professor in the Faculty of Management Sciences, University of Ottawa. He holds a Diploma in Mechanical/Electrical Engineering from the National Technical University in Athens, Greece, an M.S. and Ph.D. in Industrial Engineering/Operations Research from the University of California, Berkeley. His publications have appeared in several journals. His current research interests include problems in monopoly regulation, capital budgeting and competitive bidding. Professor Perrakis is a member of the American Economic Association.

Christopher John Piper ("Some Easy Postoptimality Analysis for Zero-One Programming") is an Assistant Professor at the School of Business Administration, University of Western Ontario. He received a B.Sc. degree from McGill University, an M.B.A. from the University of Western Ontario, and M.S. and Ph.D. degrees in systems sciences from the Graduate School of Industrial Administration, Carnegie-Mellon University. Professor Piper is a member of TIMS, ORSA, ACM (SIGMAP) and the Mathematical Programming Society.

Jean-Pierre Ponssard ("On the Concept of the Value of Information in Competitive Situations") is a Research Fellow at l'Ecole Polytechnique and a Consultant at Centre d'Etudes Supérieures du Management Public. From September 1973 to September 1974, he was on leave at the International Institute of Applied Systems Analysis, Laxenburg, Austria. He was ancien élève de l'Ecole Polytechnique and received a Ph.D. in engineering economic systems from Stanford University. Dr. Ponssard's main fields of interest are decision theory and game theory. His papers have appeared in the *International Journal of Game Theory and Management Science*.

Izzet Sahin ("On Risky Investments with Random Timing of Cash Returns and Fixed Planning Horizon") an Associate Professor with the Faculty of Management Sciences, University of Ottawa. Dr. Izzet Sahin published in *Applied Probability*, *Operations Research* and in other journals. Currently, on leave from Ottawa, he is with the Middle East Technical University, Ankara, Turkey. A graduate of Technical University of Istanbul, Stevens Institute and Case (Ph.D., 1969), he has also been active in consulting.

Dennis J. Sweeney ("An Improved Long-Run Model for Multiple Warehouse Location") is an Associate Professor of Quantitative Analysis at the University of Cincinnati. He received a B.S. in accounting from Drake University and an M.B.A. and D.B.A. in quantitative business analysis from Indiana University. His papers in the areas of optimal control and mathematical programming have appeared in professional journals. Professor Sweeney is a co-author of *Linear Programming for Decision Making* and is a member of

ORSA and the Mathematical Programming Society.

Ronald L. Tatham ("An Improved Long-Run Model for Multiple Warehouse Location") is Associate Professor in the Department of Marketing at the University of Cincinnati. He received a B.B.A. from the University of Texas, an M.B.A. from Texas Tech and a Ph.D. from the University of Alabama. His papers have appeared in *Business Horizons*, *Journal of Marketing Research* and *Journal of the Marketing Research Society*, among others. He is a member of TIMS and the American Marketing Association.

A. S. Walters ("A Comprehensive Planning Model for Long-Range Academic Strategies") is an Associate Professor in the Graduate School of Business and Public Administration at Cornell University. He earned a B.A. in mathematics and an M.S. in engineering sciences (applied mathematics) from Northwestern University and an interdisciplinary Ph.D. in computer science, mathematics and quantitative methods of business from the University of Texas. His papers have appeared in various professional journals. He is a member of TIMS, ORSA, and AAAS.

Andris A. Zoltners ("Some Easy Postoptimality Analysis for Zero-One Programming") is an Assistant Professor of Management Science in the School of Business Administration at the University of Massachusetts. Professor Zoltners received a B.A. in mathematics from the University of Miami, an M.S. in mathematics from Purdue University and an M.S. and Ph.D. in industrial administration from Carnegie-Mellon University. He has worked in both the aerospace and the oil industries and serves as a consultant to several firms. He is a member of TIMS, ORSA, and the American Marketing Association.
