With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

## NOTES ABOUT AUTHORS

**Norman R. Baker** ("A Budget Allocation Model for Large Hierarchical R&D Organizations") is Professor and Head of the Department of Quantitative Analysis in the College of Business Administration, University of Cincinnati. He holds a B.S. in industrial engineering from Northeastern University and an M.S. and Ph.D. in industrial engineering and management science from Northwestern University. Dr. Baker has published over 20 articles which have appeared in various journals. He is a member of ORSA, TIMS, AIDS, AIEE, and IEEE, an ORSA/TIMS visiting lecturer, and a council member of TIMS' College on R&D Management.

**Suresh Chandra** ("A Duality Theorem for a Nondifferentiable Fractional Programming Problem") is a Lecturer in the Department of Mathematics at the Indian Institute of Technology, New Delhi, India. He holds an M.Sc. in statistics from Lucknow University and a Ph.D. in mathematical programming from I.I.T. Kanpur. Dr. Chandra's articles have appeared in *Zeitschrift für Operations Research*, *CCERO*, *RFAIRO*, *ZAAM* and *Journal of Operations Research Society of Japan*, etc. He is a member of the Operations Research Society of India and is currently interested in mathematical programming and game theory.

**I. L. Coverdale** ("An Improved Heuristic Procedure for a Nonlinear Cutting Stock Problem") received a B.A. in mathematics from Cambridge University and an M.Sc. in operational research from the University of Hull, England. He is employed as an Operational Research Scientist with the Department of Health and Society Security, London, England.

**J. G. Ecker** ("An Easy Primal Method for Geometric Programming") is an Associate Professor in the Mathematical Sciences Department at Rensselaer Polytechnic Institute, where he is also a faculty member of the Interdisciplinary Program of Operations Research and Statistics. He received a Ph.D. in mathematics from the University of Michigan in 1968. He spent the 1975-76 academic year at the Center of Operations Research and Econometrics in Louvain, Belgium, as a NATO Postdoctoral Fellow. His research interests are in mathematical programming, including geometric programming, multiple objective programming, and applications of mathematical programming to societal problems. Professor Ecker is an Associate Editor of *Operations Research* and is a member of ORSA, SIAM, and the Mathematical Programming Society.

**Donald Erlenkotter** ("Optimal Investment Scheduling with Price-Sensitive Dynamic Demand") is Associate Professor of Planning and Decision Sciences in the Graduate School of Management, University of California, Los Angeles. He received a B.C.E. in civil engineering from the Georgia Institute of Tech-

nology, and an M.B.A., an M.S. in statistics, and a Ph.D. in business from Stanford University. Professor Erlenkotter is a member of TIMS, ORSA, AEA, ASA, the Econometric Society, the Operational Research Society of India, and the Mathematical Programming Society.

**T. R. Gulati** ("A Duality Theorem for a Nondifferentiable Fractional Programming Problem") is a Senior Research Fellow in the Department of Mathematics at the Indian Institute of Technology, New Delhi, India. He holds an M.Sc. in mathematics and has recently submitted his Ph.D. thesis, entitled "Optimality Criteria and Duality in Complex Mathematical Programming." Mr. Gulati has published articles in *Bull. Aust. Math. Soc.* and *ZAAM*. He is a member of the Operations Research Society of India.

**Thomas W. Hill, Jr.** ("A Simple Perturbed Demand Inventory Model with Ordering Cost") is a Senior Systems Analyst at AiResearch Manufacturing Co. He holds a B.S. in technical design, an M.S.I.E. and Ph.D., all from Arizona State University. His research interests are applications of combinatorics and graph theory.

**Stratton C. Jaquette** ("A Utility Criterion for Markov Decision Processes") is Assistant Professor in Cornell University's Operations Research Department. He holds a B.A. in mathematics from Swarthmore College, an M.S. in industrial engineering from Stanford University, and a Ph.D. in operations research also from Stanford. Professor Jaquette has published over a half dozen articles which have appeared in several professional journals. He is a member of ORSA and TIMS.

**P. Michael Maher** ("A Budget Allocation Model for Large Hierarchical R&D Organizations") is a Professor and Research Coordinator for the Faculty of Business Administration and Commerce, University of Alberta in Edmonton, Canada. He received a B.E. in chemical engineering at the University of Saskatchewan in 1962, an M.B.A. degree from the University of Western Ontario in 1965 and a Ph.D. from the School of Management, Northwestern University in 1970. He has been with the University of Alberta since 1970. Dr. Maher's research activities have been focused on the problems of allocating resources within organizations and the social psychological problems involved in using scientific methods and procedures to arrive at optimal allocations. He has authored and coauthored numerous articles on this subject, several of which have appeared in *Management Science*.

**Robert M. Nauss** ("An Efficient Algorithm for the 0-1 Knapsack Problem") is an Assistant Professor of Management Science at the School of Business Administration, University of Missouri-St. Louis. He holds a B.S. in industrial engineering/management science from Northwestern University, an M.S. in

operations research from Cornell University, and a Ph.D. in operations research from UCLA. Dr. Nauss' papers have appeared in various journals. He is a member of ORSA, TIMS, AIDS, and the Mathematical Programming Society.

**Richard P. O'Neill** ("Acceleration of Lagrangian Column-Generation Algorithms by Penalty Function Methods") is Assistant Professor of Computer Science at Louisiana State University. He received a B.S. in chemical engineering, an M.B.A. and a D.B.A. in operations research from the University of Maryland. His current research interests include column generation algorithms, decomposition of large-scale mathematical programs, multiobjective optimization, testing of mathematical programs, and energy problem modeling. His articles have appeared in several professional journals, and he is a co-author of a forthcoming book on operations research. He is a member of ORSA, TIMS, ACM, the Mathematical Programming Society and AIDS.

**Albert H. Rubenstein** ("A Budget Allocation Model for Large Hierarchical R&D Organizations") has his B.S. from Lehigh and his M.S. and Ph.D. from Columbia, all in industrial engineering. Since 1959 he has been Professor of Industrial Engineering and Management Sciences at Northwestern University, where he established and heads the Organization Theory area and the Program of Research on the Management of Research and Development. His research interests are in organization theory with special reference to R and D. He is editor of the *Transactions on Engineering Management* and the author of many articles on research management, organization theory, and communications. He has served as Vice President of Research and Education of The Institute of Management Sciences.

**C. Richard Shumway** ("A Budget Allocation Model for Large Hierarchical R&D Organizations") is Associate Professor of Agricultural Economics at Texas A&M University. He earned a B.S., M.S., and Ph.D., all in agricultural economics from the University of California, at Davis. His publications have appeared in several journals. A member of the American Economic Association and American Agricultural Economic Association, Professor Shumway is the recipient of awards from the American Agricultural Economic Association and Western Agricultural Economics Association for published research.

**Wm. E. Souder** ("A Budget Allocation Model for Large Hierarchical R&D Organizations") is Associate Professor of Industrial Engineering, Systems Management Engineering and Operations Research at the University of Pittsburgh. He received a B.S. with Distinction in chemistry from Purdue University and an M.B.A. and Ph.D. in management sciences from St. Louis University. His present research interests are in R&D planning and control models, organization behavior, creativity, innovation and group decision making. Dr. Souder is the author of over fifty technical publications and monographs in these areas, several of which have appeared in *Manage-*

*ment Science*. Dr. Souder is a member of TIMS (chairman of COLRAD), ORSA, the Academy of Management and AIDS. He is an associate editor of the *IEEE Trans. on Eng. Mgt.* and a member of the editorial board of the *AIIE Trans.*

**Robert R. Trippi** ("Optimal Investment Scheduling with Price-Sensitive Dynamic Demand") is Assistant Professor of Business Administration at San Diego State University. He received his B.A. in Economics from the City University of New York and his S.M. and Ph.D. from the Sloan School of Management at the Massachusetts Institute of Technology. He is the author of articles on investment theory and related topics in the *Journal of Optimization Theory and Applications*, *Naval Research Logistics Quarterly*, *Journal of Economics and Business*, *Decision Sciences*, and other journals.

**F. Wharton** ("An Improved Heuristic Procedure for a Nonlinear Cutting Stock Problem") received a B.Sc. in mechanical engineering from Manchester University, England. Having been employed in the heavy engineering industry, he is now a Lecturer in Operational Research at the University of Hull, England.

**William B. Widhelm** ("Acceleration of Lagrangian Column-Generation Algorithms by Penalty Function Methods") is Associate Professor of Management Science-Statistics at the University of Maryland's College of Business and Management. He holds a B.S. and M.S. in electrical engineering and an M.S. and Ph.D. in operations research, all from the Johns Hopkins University. He has published articles in several professional journals and is a member of TIMS, ORSA and AIDS.

**Milan Zeleny** ("The Attribute-Dynamic Attitude Model (ADAM)") is Associate Professor of Business at the Graduate School of Business, Columbia University. He received an Ingenieur degree in political economy from Prague School of Economics, an M.S. in systems analysis and a Ph.D. in operations research, both from the University of Rochester. Dr. Zeleny is the author of over sixty articles, books and essays on CPM and PERT, MCDM, multiobjective and multi-parametric LP, multi-payoff games, autopoietic simulation, distribution-free portfolio selection, and other topics. His works have appeared in numerous professional journals. He is the author of *Linear Multiobjective Programming*, editor and contributor to *Multiple Criteria Decision Making* and *Multiple Criteria Decision Making: Kyoto 1975*.

**Michael J. Zoracki** ("An Easy Primal Method for Geometric Programming") received a B.A. from Wabash College in 1967, and an M.S. and Ph.D. in mathematics from Rensselaer Polytechnic Institute in 1969 and 1974, respectively. Thesis research was concentrated on techniques for geometric programming. He is presently Senior Analyst at Pattern Analysis and Recognition Corporation, Rome, N. Y. Current work interests include digital image processing for enhancement and automatic pattern recognition applications with synthetic aperture radar, B/W vertical photography, and infrared image data.
