With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

NOTES ABOUT AUTHORS

Jair M. Babad ("Management of Program Storage in Computers"), is an Assistant Professor at the Graduate School of Business, University of Chicago. He holds a B.S. in mathematics and statistics and an Actuarial Diploma from Hebrew University, Jerusalem, an M.S. and Ph.D. in operations research from Cornell University. His papers have appeared in several journals such as *CACM*, *JACM* and *Simuletter*. He has consulted for both government and industries. He is a member of TIMS, ORSA, and ACM.

V. Balachandran ("Management of Program Storage in Computers") is a Professor in the Graduate School of Management at Northwestern University. He holds a B.S. (Hons.), M.A. and M.Sc. degrees in mathematics and statistics from Annamalai University, India, an M.S. in engineering from the University of Dayton, an M.S. and Ph.D. in industrial administration (OR) from Carnegie-Mellon University. His publications have appeared in several journals including *Operations Research*, *Management Science*, *NRLQ*, and *AIIE Transactions*. He is a senior member of AIIE, a member of ORSA and TIMS and of International Association of Statistics in Physical Sciences of the International Statistical Institute.

Roger J. Bowden ("A Dual Concept and Associated Algorithm in Mean-Variance Portfolio Analysis") is Professor of Applied Economics at the University of Western Australia, Perth. Professor Bowden holds the degrees B.A., B.Sc., M.A. from the University of Auckland and a Ph.D. in economics from the University of Manchester, where he also taught for four years. His papers, mainly in economics and econometrics, have appeared in several professional journals.

Robert Carbone ("Equity and Selective Pollution Abatement Procedures") is an Assistant Professor of Management Sciences and Public Administration at The Ohio State University. He received a B.A. in social sciences from the Université de Montréal, an M.A. in economics from the University of Ottawa and a Ph.D. in urban and public affairs from Carnegie-Mellon University. In addition to his research interest in environmental management, Dr. Carbone is currently engaged in research concerning the use of artificial intelligence to estimation theory and the application of the new approaches he has developed for reforming the property tax administration.

Wing-Kin Chiu ("Economic Design of np Charts for Processes Subject to a Multiplicity of Assignable Causes") Ph.D., F.I.S., F.S.S., F.I.Q.A., Senior Member ASQC, is Senior Lecturer in Statistics, University of Hong Kong, and abstracter for Quality Control and Applied Statistics. His main academic interests are economic industrial statistics and selection problems. He has published over twenty papers in these fields.

Cyrus Derman ("Optimal System Allocations with Penalty Costs") is Professor of Operations Research at Columbia University. He is currently a visiting professor in the Department of Mathematics at the University of California at Davis. He received an A.B. and an A.M. in mathematics from University of Pennsylvania and a Ph.D. in mathematical statistics from Columbia University. Professor Derman is the author of over forty papers as well as two books: *Probability and Statistical Inference for Engineers*, (with M. Klein), Oxford University Press, 1959, and *Finite State Markovian Decision Processes*, Academic Press, 1970. Professor Derman is a Fellow of the Institute of Mathematical Statistics and a Fellow of the American Statistical Society.

Peter C. Fishburn ("Information Overload in Mechanical Processes") is Research Professor of Management Science in the College of Business Administration at The Pennsylvania State University. He received his Ph.D. in operations research at Case Institute of Technology and his B.S. in industrial engineering at Penn State. Dr. Fishburn is the author of several books and a number of journal articles.

William V. Gehrlein ("Information Overload in Mechanical Processes") is Research Assistant in the College of Business Administration at The Pennsylvania State University. He received his Ph.D. in business administration at Penn State and his B.S. in physics at Gannon College. Dr. Gehrlein's articles have appeared in *Management Science*, *Psychometrika*, *Mathematical Programming*, *Behavioral Science*, *Journal of Economic Theory* and other journals.

Edwin L. Heard ("Due-Dates and Instantaneous Load in the One-Machine Shop") is Associate Professor of Business Administration at the University of South Carolina and Consultant to the Operations Research Department at South Carolina National Bank. He received the D.B.A. and M.B.A. in production management and quantitative methods from Indiana University and the B. B.A. from Georgia Southern College. He is a member of TIMS and AIDS, has presented several papers at regional and national conferences, and has published in the *Accounting Review*.

Gerald J. Lieberman ("Optimal System Allocations with Penalty Costs") is Associate Dean of Humanities and Science at Stanford University. He received a B.M.E. in mechanical engineering from Cooper Union, an A.M. in mathematical statistics from Columbia University and a Ph.D. in mathematical statistics from Stanford University. Professor Lieberman's papers have appeared in *The Annals of Mathematical Statistics*, *Biometrika*, *Management Science*, and *Technometrics*. He is the co-author of five books, the most recent of which is *Introduction to Operations Research* (with F. S. Hillier), Holden-Day, 1967. He is a

Fellow of the American Statistical Association, the Institute of Mathematical Statistics, American Society for Quality Control and AAAS. He is a member of the Institute of Management Sciences, ORSA and International Association for Statistics in Physical Sciences.

Steven F. Maier ("Capital Budgeting in the Decentralized Firm") is Assistant Professor at the Graduate School of Business Administration, Duke University. He received a B.S. in industrial engineering from Cornell University and an M.S. and Ph.D. in operations research from Stanford University. He is a member of TIMS, ORSA, and the American Finance Association.

Edwin H. Neave ("Evaluating Security Performance Forecasts") is a Professor in the School of Business, Queen's University, Kingston, Canada. He has also held posts up to the level of Assistant to the Controller of the Canadian Imperial Bank of Commerce, and he has taught at Berkeley and Northwestern University. He received a B. Comm. degree from the University of British Columbia and the Ph.D. degree in business administration from the University of California, Berkeley. He is Departmental Editor, Finance, for *Management Science*, as well as being a member of TIMS, ORSA, and several other societies. His articles have appeared in several journals, including *Management Science*, *The Journal of Bank Research*, and *The Journal of Economic Theory*. He is co-author of the fifth edition of *Financial Institutions*, and author of *The Canadian Financial System* (in preparation).

Sheldon Ross ("Optimal System Allocation with Penalty Costs") is Associate Professor of Industrial Engineering and Operations Research, University of California, Berkeley. He received a B.S. in mathematics from Brooklyn College, an M.S. in mathematics from Purdue University and a Ph.D. in mathematical statistics from Stanford University. Professor Ross is the author of *Applied Probability Models with Optimization Applications*, Holden-Day, 1970, *Introduction to Probability Models*, Academic Press, 1972 and *A First Course in Probability*, MacMillan, 1976. His papers have appeared in *Management Science*, *Operations Research*, *Journal of Applied Probability*, and *Journal of the American Statistical Association*. He is a member of TIMS, ORSA, American Statistical Association and Institute of Mathematical Statistics.

V. Srinivasan ("Decomposition of a Multi-Period Media Scheduling Model in terms of Single Period Equivalents") is Professor of Marketing and Management Science at the Graduate School of Business, Stanford University. He is a graduate of the Indian Institute of Technology, Madras where he received a B. Tech. in mechanical engineering and holds an M.S. and Ph.D. in industrial

administration from Carnegie-Mellon University. Professor Srinivasan's papers have appeared in several professional journals. He is a member of TIMS, ORSA, the American Marketing Association and the Psychometric Society, and he is an Associate Editor for *Management Science*.

Edward A. Stohr ("Management of Program Storage in Computers"), is an Assistant Professor at the Graduate School of Management, Northwestern University. He holds a B.S. in Engineering with Hons., from the University of Melbourne, an M.B.A. and Ph.D. from the University of California, Berkeley. His publications have appeared in journals such as *Annals of Social and Economic Measurement*, *PACM*, *Simuletter*. He has consulted for both Government and Industries and is a member of ACM and TIMS.

James R. Sweigart ("Equity and Selective Pollution Abatement Procedures") is currently an Assistant Professor of Management Science in the College of Business Administration at the University of South Carolina. He holds a Ph.D. in urban and public affairs from Carnegie-Mellon University and an M.S. and B.A. in mathematics from Miami University and Elizabethtown College, respectively. His areas of interest focus on environmental management and modeling in the selection and evaluation of public policy.

Arne Thesen ("Heuristic Scheduling of Activities Under Resource and Precedence Restrictions") is Associate Professor of Industrial Engineering at the University of Wisconsin-Madison. He holds a Ph.D. from the University of Illinois-Urbana-Champaign (1972). His papers have appeared in *Management Science*, *NRLQ* and other journals. He is the author and co-author of two forthcoming books on systems analysis.

James H. Vander Weide ("Capital Budgeting in the Decentralized Firm") is Assistant Professor at the Graduate School of Business Administration, Duke University. He received a B.S. in economics from Cornell University and a Ph.D. in finance from Northwestern University. He is a member of TIMS and the American Finance Association.

John C. Wiginton ("Evaluating Security Performance Forecasts") is an Associate Professor in the School of Business, Queen's University, Kingston, Canada. He has taught at the University of British Columbia, Carnegie-Mellon University and York University. He received the B.A.Sc. (chemical engineering) and M.B.A. degrees from the University of British Columbia, and M.S. and Ph.D. degrees in economics from the Graduate School of Industrial Administration of Carnegie-Mellon University. His articles have appeared in several journals, including *Applied Economics*, *Decision Sciences* and *Omega*.
