With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

NOTES ABOUT AUTHORS

Vijay S. Bawa ("Mathematical Programming of Admissible Portfolios") is Supervisor, Economic and Financial Studies Group of Bell Laboratories at Holmdel, New Jersey. He received B. Tech (Honors) in mechanical engineering from I. I. T., Bombay and Ph.D. in operations research from Cornell University. He has published extensively in several journals.

Charles A. Beswick ("Allocating Selling Effort via Dynamic Programming") has extensive industrial experience with Olin Corporation in the design of management information systems. He holds a B.S. from Davidson College and an M.S. and Ph.D. in management science from the University of Tennessee and is currently on the faculty of the University of South Carolina. His dissertation, "An Aggregate Multistage Decision Model for Sales Force Management," was selected for a National Doctoral Dissertation Award by the American Institute of Decision Sciences. Dr. Beswick is a consultant to business and industrial firms in the areas of applied quantitative methods and information systems.

Donald Erlenkotter ("Capacity Expansion with Imports and Inventories") is Associate Professor of Planning and Decision Sciences in the Graduate School of Management, University of California, Los Angeles. He received a B.C.E. in civil engineering from the Georgia Institute of Technology, and an M.B.A., an M.S. in statistics, and a Ph.D. in business from Stanford University. Professor Erlenkotter is a member of TIMS, ORSA, AEA, ASA, the Econometric Society, the Operational Research Society of India, and the Mathematical Programming Society.

Daniel P. Heyman ("The T -Policy for the $M/G/1$ Queue") is a member of the Operations Research Center at Bell Telephone Laboratories in Holmdel, New Jersey. During the 1976-1977 academic year he is a visiting member of the faculty of the School of Organization and Management of Yale University. He received a Ph.D. in operations research from the University of California at Berkeley. He is currently an Associate Editor of *Operations Research* and of *Management Science*, and is an officer of the TIMS College on Applied Probability.

Darwin Klingman ("Finding Equivalent Network Formulations for Constrained Network Problems") is Director of Computer Sciences Research at the Center for Cybernetic Studies and Professor of Operations Research and Computer Sciences at The University of Texas, Austin. He graduated Phi Beta Kappa in mathematics (1966) and received an M.A. in mathematics (1967) from Washington State University, and a Ph.D. in mathematics, computer sciences and business administration (1969) from The University of Texas at Austin. He has jointly authored 40

published papers and 60 research memoranda in the areas of network analysis, goal programming, integer programming, biomathematics, and computer augmented instruction. Dr. Klingman is also an Associate Editor of *Management Science*.

Sang M. Lee ("Multi-Criteria School Busing Models") is currently Professor and Chairman of the Department of Management, the University of Nebraska-Lincoln. Previously he was Professor and Coordinator of Management Science at Virginia Polytechnic Institute and State University. He received his Ph.D. from the University of Georgia. Dr. Lee has published six books, including *Goal Programming for Decision Analysis*, and over one hundred research articles in numerous professional journals. He is a member of TIMS, ORSA, and AIDS.

John O. McClain ("Horizon Effects in Aggregate Production Planning with Seasonal Demand") has been a faculty member of the Graduate School of Business and Public Administration at Cornell University since 1970. His Ph.D. training was in operations research in the Administrative Science Department at Yale University. His research has appeared in *Management Science*, *Operations Research*, *Health Services Research*, and *Medical Care*.

Miley W. Merkhofer ("The Value of Information Given Decision Flexibility") is a Decision Analyst with the Stanford Research Institute, Menlo Park, California. His education includes degrees in physics and electrical engineering and a Ph.D. in engineering economic systems from Stanford University. Currently, Dr. Merkhofer is conducting research into the process by which decision models are constructed. He also participates in executive training seminars in decision analysis and periodically teaches management science courses for the University Extension, University of California at Berkeley.

Do Le Minh ("A Discrete Time, Single Server Queue from a Finite Population") is a Teaching Fellow at The University of New South Wales, Australia. He holds an engineering degree in naval architecture and a Ph.D. in traffic engineering.

Laurence J. Moore ("Multi-Criteria School Busing Models") is Associate Professor and Coordinator of Management Science in the College of Business at Virginia Polytechnic Institute and State University. He received the B.A. in economics from Monmouth College, Illinois, and the M.S. in economics and D.B.A. in quantitative systems, both from Arizona State University. Dr. Moore's articles have appeared in numerous professional journals. He is also co-author of the books *Introduction to Decision Science*, with Sang M. Lee, and *GERT Modeling and Simulation: Fundamentals and Applications*, with Edward

R. Clayton. He is a member of TIMS, ORSA, AIDS, and AIIE.

Peter A. Morris ("Combining Expert Judgments: A Bayesian Approach") is a Research Scientist in the Analysis Research Group at Xerox Palo Alto Research Center. He is also a Consulting Assistant Professor in the Engineering-Economic Systems (EES) Department at Stanford University and an Associate Editor of *Management Science*. He received an M.S. and Ph.D. degree in EES at Stanford University, and a B.S. in electrical engineering at the University of California at Berkeley. Dr. Morris was previously an analyst and the manager of a quantitative modeling group in the manpower area of the Department of Defense.

G. Wayne Morrison ("Kalman Filtering Applied to Statistical Forecasting") holds two degrees from the University of Tennessee at Knoxville—a B.S. in engineering physics and an M.S. in management science. He is at the present time completing his dissertation and will receive the Ph.D. degree in management science. Currently he is employed as a Research Associate in the Computer Sciences Division of the Oak Ridge National Laboratory.

David H. Pike ("Kalman Filtering Applied to Statistical Forecasting") has earned a B.S. in electrical engineering, a Master of Engineering in systems engineering and operations research and a Ph.D. in industrial engineering at the University of Florida. Currently, he is Associate Professor of Industrial Engineering and a member of the Management Science Faculty at the University of Tennessee at Knoxville. He has also taught at the University of Florida and has worked for Union Carbide Nuclear Division.

Harold J. Steudel ("A Time Series Approach to Queueing Systems with Applications for Modeling Job-Shop In-Process Inventories"), Assistant Professor of Management at Marquette University in Milwaukee,

obtained a B.S. in mechanical engineering from the University of Wisconsin-Madison in 1968; a MSME from the University of Wisconsin-Milwaukee in 1971; and a Ph.D. in mechanical engineering from the University of Wisconsin-Madison in 1974. He worked for three years as a Facilities Planning Engineer, and now serves as a consultant at The Falk Corporation-Milwaukee. He is a registered professional engineer and a senior member of the American Institute of Industrial Engineers (AIIE).

L. Joseph Thomas ("Horizon Effects in Aggregate Production Planning with Seasonal Demand") is an Associate Professor in the Graduate School of Business and Public Administration, Cornell University. He received a B.S. from Carnegie-Mellon University and a Ph.D. from Yale University. His previous articles have appeared in *Management Science*, *Operations Research*, and several other journals, and he has co-authored two books (with T. R. Dyckman, for Prentice-Hall): *Algebra and Calculus for Business* (1974), and *Introduction to Statistics for Management* (1977). Dr. Thomas is a member of TIMS, ORSA and AIDS.

S. M. Wu ("A Time Series Approach to Queueing Systems with Applications for Modeling Job-Shop In-Process Inventories"), Professor of Mechanical Engineering and Statistics at the University of Wisconsin-Madison, was graduated with a B.S. from the Chiao Tung University, Shanghai, in 1945, and Ph.D. in mechanical engineering from the University of Wisconsin-Madison in 1962. He is the recipient of the 1968 ASME Blackall Award, 1968 AWS Jennings Award, and 1974 SME National Education Award. Dr. Wu has authored and co-authored numerous technical papers. He is a member of the American Statistical Association (ASA), the American Society of Mechanical Engineers (ASME), and Society of Manufacturing Engineers (SME).
