With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

NOTES ABOUT AUTHORS

Yakov Amihud ("The Effect of Uncertainty in Input Quantities on the Optimal Expected Input Combination") is Lecturer at the Faculty of Management, The Leon Recanati Graduate School of Business Administration, Tel-Aviv University. He received his B.A. from Hebrew University and his M.Sc. and Ph.D. from New York University. Dr. Amihud's current research focuses on the economics of uncertainty.

Norman L. Chervany ("Research in Management Information Systems: The Minnesota Experiments") is Professor of Management Sciences in the Graduate School of Business Administration at the University of Minnesota. He received his M.B.A. and D.B.A. from Indiana University. His teaching and research interests are in the areas of implementation of management science and the decision-maker/information system/decision problem interface. He is active in The Institute of Management Sciences and the American Institute for Decision Sciences. His work has appeared in numerous professional journals.

Gary W. Dickson ("Research in Management Information Systems: The Minnesota Experiments") is Professor of Management Information Systems at the Graduate School of Business Administration of the University of Minnesota, where he has been a member of the faculty since 1965. He also serves as the Director of the Management Information Systems Research Center there. He received a B.S. in physics and an M.B.A. and a Ph.D. in business administration from the University of Washington. His current teaching and research interests are in the area of the managerial uses of computers and quantitative technology. He has been active in the Society for Management Information Systems and the American Institute for Decision Sciences. Professor Dickson's papers appeared in numerous professional journals.

Loic Etesse ("Configurations Optimales de Tests pour un Processus en Chaîne en Fonction de Deux Critères") has been "ingénieur de recherche" at L.A.A.S. since September 1973. He graduated from "Ecole Nationale de l'Aviation Civile et de l'Ecole Nationale Supérieure de l'Aéronautique et de l'Espace" (Toulouse). Until September 1976 he worked on the "problems of optimization on large production systems" team. He is currently an engineer at C.N.E.T.

Richard J. Giglio ("Planning Electric Power Generation: A Nonlinear Mixed Integer Model Employing Benders Decomposition") is Professor of Industrial Engineering and Operations Research at The University of Massachusetts (Amherst). He holds a B.S. from M.I.T. and M.S. and Ph.D. in industrial engineering from Stanford. He has published in *Management Science*, *Operations Research* and several other journals. His major areas of

interest include investment and capacity planning, scheduling and health care applications.

Stephen C. Graves ("Storage-Retrieval Interleaving in Automatic Warehousing Systems") is a doctoral candidate in operations management at the Graduate School of Management, University of Rochester. He holds an A.B. from Dartmouth College and an M.B.A. from the Amos Tuck School. His research interests include multi-echelon inventory theory, single-machine production scheduling, and the design and control of automatic warehousing systems. He is a student member of both TIMS and ORSA.

Warren H. Hausman ("Storage-Retrieval Interleaving in Automatic Warehousing Systems") is Associate Professor of Management at the Graduate School of Management, University of Rochester. He received a B.A. in economics from Yale University and a Ph.D. in industrial management from M.I.T. and previously taught at Cornell University and M.I.T. He is the author of a score of articles in *Management Science* and related journals and coauthor of *Matrix Algebra for Business and Economics* (with S. R. Searle and assistance from H. Bierman, J. E. Hass and L. J. Thomas), John Wiley and Sons, 1970, and *Quantitative Analysis for Business Decisions* (with H. Bierman and C. P. Bonini), Irwin, 1977 (5th ed.). Professor Hausman's other research interests involve production planning, inventory control and sequential decision problems. He is a member of TIMS and ORSA and is Departmental Editor for Logistics for *Management Science*.

Leland Joe ("Electric Power System Planning with Explicit Stochastic Reserves Constraint") is a student in the System Science Department at UCLA, and is studying for a Ph.D. in operations research. He received an M.S. in operations research and a B.S. in physics, both from UCLA. He currently holds a Deutsch Company Fellowship and is a member of Sigma Pi Sigma. His research interests are in Markov and semi-Markov decision processes under uncertainty.

Jeff Kennington ("An Effective Subgradient Procedure for Minimal Cost Multicommodity Flow Problems") is an Assistant Professor in the Department of Industrial Engineering and Operations Research at Southern Methodist University, Dallas, Texas. In 1973 he received his Ph.D. from the Department of Industrial and Systems Engineering, Georgia Institute of Technology. His other publications have appeared in *Operations Research*, *Management Science*, *Naval Research Logistics Quarterly*, and *AIIE Transactions*. Professor Kennington is a member of AIIE, ORSA, TIMS, and the Mathematical Programming Society.

Michel Lemaitre ("Configurations Optimales de Tests pour un Processus en Chaîne en Fonction de Deux Critères") est né en 1949 à St. Germain-en Laye (France). Ingénieur

E.N.S.E.E.I.H.T. en 1972, il obtient en 1975 le grade de docteur-ingénieur en soutenant une thèse sur la réalisation de questionnaires et plans d'inspection optimaux et heuristiques. Il travaille actuellement au Centre d'Etudes et de Recherches de Toulouse, sur les Banques de Données Relationnelles, aspects langage et répartition.

James M. Lowerre ("Work Stretch Properties for the Scheduling of Continuous Operations under Alternative Labor Policies") is a 1951 graduate of West Point. He served in combat in Korea. He is currently an Associate Professor of Mathematics at Clarkson College of Technology. He received his doctorate from SUNY at Buffalo in 1965. He has published in statistics and applied management science.

Frank Noonan ("Planning Electric Power Generation: A Nonlinear Mixed Integer Model Employing Benders Decomposition") is Assistant Professor of Industrial and Operations Engineering at The University of Michigan. He holds a B.S. in physics from Boston College, an M.S. in mathematics from Northeastern University and a Ph.D. in operations research from the University of Massachusetts. His major areas of interest are economic decision making and optimization as applied to energy systems and public utilities.

Shailendra C. Parikh ("On a Fleet Sizing and Allocation Problem") is Senior Research Associate in the Department of Operations Research at Stanford University. He holds a B. Eng. (elec.) from University of Bombay, and an M.S. and Ph.D. from the University of California, Berkeley. He taught at University of California, Berkeley, University of Santa Clara, and University of British Columbia. Dr. Parikh is a member of ORSA, TIMS, and AIDS.

Jean Pierre Richard ("Configurations Optimales de Tests pour un Processus en Chaîne en Fonction de Deux Critères") est actuellement Ingénieur dans le division Industrie de la CERC, Paris où il s'occupe de gestion de production et de commande numérique. Il s'intéresse par ailleurs aux méthodologies de conception et d'élaboration de programmes. Il est Ingénieur en Electronique, Docteur d'état en Automatique-Informatique. Il s'est occupé précédemment de Maintenance des Systèmes Informatiques de Gestion de Production, et de Robotique Industrielle.

Charles R. Scherer ("Electric Power System Planning with Explicit Stochastic Reserves Constraint") is Assistant Professor in the Engineering Systems Department at UCLA. He received a B.S. and an M.S. in civil and environmental engineering at Stanford University, and a Ph.D. in environmental systems engineering at Cornell University. His research interests focus on engineering-economic-systems problems in water and en-

ergy resource allocation. He has articles in *The Bell Journal of Economics*, *Water Resources Research*, *The Journal of Environmental Economics and Management* and other journals. His research monograph *Estimating Electric Power System Marginal Costs* is forthcoming as a "Contribution to Economic Analysis" with North-Holland Publishing Co. He is a member of ORSA, TIMS, IEEE, ASCE, AGU, AEA, and AAAS.

Leroy B. Schwarz ("Storage-Retrieval Interleaving in Automatic Warehousing Systems") is Assistant Professor of Management at the Graduate School of Management, University of Rochester. He holds an M.B.A. and Ph.D. from the Graduate School of Business, University of Chicago. His research interests include the management of network inventory systems, facility location, design and scheduling of automatic warehousing systems, and aggregate planning. Professor Schwarz is a member of TIMS and ORSA, and serves as an Associate Editor for *Management Science*.

James A. Senn ("Research in Management Information Systems: The Minnesota Experiments") is Assistant Professor of MIS at the School of Management, State University of New York at Binghamton, where he has been a member of the faculty since 1973. He is also chairman of the Executive Development Program in MIS there. His graduate work at the University of Minnesota where he received a Ph.D. in management information systems in 1973. Professor Senn's work has appeared in professional and research publications and he is the author of two textbooks. He is a member of The Institute of Management Sciences, The American Institute of Decision Sciences, The Association for Computing Machinery and The Society for Management Information Systems. His teaching and research interests are in systems analysis and design and in the structure of information and information systems.

Mohamed A. Shalaby ("An Effective Sub-gradient Procedure for Minimal Cost Multi-commodity Flow Problems") is a doctoral student in the Department of Industrial Engineering and Operations Research at Southern Methodist University. He holds an M.Sc. in mechanical engineering from Cairo University, Egypt, and an M.S.O.R. from Southern Methodist University. He is a student member of ORSA.

Norman Zadeh ("On Optimal Doubling in Tournament Backgammon") received a Ph.D. in operations research from the University of California, Berkeley. He has held positions at IBM's Thomas J. Watson Research Center and Columbia University. Doctor Zadeh's papers have appeared in *Management Science*, *Mathematical Programming*, *Networks*, *Operations Research*, and the *J.A.C.M.*
