With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

NOTES ABOUT AUTHORS

Vincent P. Barabba ("On Helping a Large Governmental Organization to do Research on Planning on Itself: A Case Study") is manager of Market Research for Xerox. He was Director of the Bureau of the Census from 1973-76. He has a degree in marketing from California State University at Northridge and an M.B.A. from the University of California at Los Angeles. He is a member of the American Marketing Association and a fellow of the American Statistical Association.

Gordon H. Bradley ("Design and Implementation of Large Scale Primal Transshipment Algorithms") is Associate Professor and Chairman of Computer Science at the Naval Postgraduate School, Monterey. He received his B.S.M.E. and M.S.I.E. from Lehigh University and his Ph.D. from Northwestern University. He has authored about twenty journal articles, served on the editorial board of *AIIE Transactions*, and is vice-chairman of the ORSA Special Interest Group in Computer Science.

Gerald G. Brown ("Design and Implementation of Large Scale Primal Transshipment Algorithms") is an Associate Professor of Computer Science and Operations Research at the Naval Postgraduate School, Monterey. He earned his Ph.D. from the University of California, Los Angeles, and is a member of ACM, AIIE, ASA, MORS, ORSA, and TIMS. He has published articles in the journals and proceedings of those societies, and in *Naval Research Logistics Quarterly*, *IEEE Transactions*, and elsewhere.

Erwin J. Durrer ("Optimization of Petroleum and Natural Gas Production") was Associate Professor of Petroleum and Natural Gas Engineering at Pennsylvania State University while writing the paper. He obtained M.S. and D. Eng. degrees from the University of California at Berkeley and an M.B.A. degree from the University of Pittsburgh. He is currently Director of Business Analysis, Commercial Development Division, Gulf Science and Technology Company.

Donald P. Gaver ("A Diffusion Approximation Solution for a Repairman Problem with Two Types of Failure") is Professor of Operations Research and Statistics at the Naval Postgraduate School, Monterey, California. He holds B.S. and M.S. degrees in mathematics from MIT and a Ph.D. in Mathematics from Princeton University. Dr. Gaver has published many papers in the areas of applied probability theory, simulation, and applied statistics. He is a member of ORSA, TIMS, IMS, and he is a Fellow of the American Statistical Association and of the American Association for the Advancement of Science.

Glenn W. Graves ("Design and Implementation of Large Scale Primal Transshipment Algorithms") is a Professor of Quantitative

Methods at the Graduate School of Management, University of California, Los Angeles. He received his degrees in mathematics from Western Michigan University (B.A.), Michigan State University (M.A.) and the University of Michigan (Ph.D.). He is a member of AMS and TIMS. He received the 1964 ONR/TIMS prize in Networks, Scheduling and Combinatorial Methods, and shared with a co-author the 1974 ORSA Lanchester Prize honorable mention and a 1976 NATO Systems Science Prize.

Ralph H. Kilmann ("On Helping a Large Governmental Organization to do Research on Planning on Itself: A Case Study") is currently Associate Professor at the Graduate School of Business, University of Pittsburgh. He received B.S. and M.S. degrees in industrial administration from Carnegie-Mellon University and a Ph.D. in management from the University of California, Los Angeles. He has authored *Social Systems Design: Normative Theory and the MAPS Design Technology*, (Elsevier, 1977) and numerous articles concerning organization design, problem solving, and behavioral approaches to strategic planning.

John P. Lehoczy ("A Diffusion Approximation Solution for a Repairman Problem with Two Types of Failure") is Associate Professor of Statistics at Carnegie-Mellon University. He holds a B.A. in mathematics from Oberlin College and M.S. and Ph.D. degrees in statistics from Stanford University. He is the author of numerous papers in applied probability theory as well as two on multiple list methods for juror selection. Professor Lehoczy is an Associate Editor of *Management Science* and a member of ORSA, ASA and IMS.

Ian I. Mitroff ("On Helping a Large Governmental Organization to do Research on Planning on Itself: A Case Study") is a Professor in the Graduate School of Business, Interdisciplinary Department of Information Science, and the Department of Sociology at the University of Pittsburgh. He also holds a research appointment in the Philosophy of Science Center. He is concerned with the application of behavioral science principles to the design of strategic planning systems. He has published extensively in numerous journals. His most recent book is *The Subjective Side of Science*, Elsevier, New York, 1974.

Frederick H. Murphy ("A Dynamic Programming Algorithm for Check-Sorting") is currently an Operations Research Analyst with the Federal Energy Administration. He holds a bachelors degree in mathematics and a Ph.D. in administrative science from Yale University and was formerly on the faculty of the Graduate School of Management at Northwestern University. He has published in

Mathematical Programming, Naval Research Logistics Quarterly, Management Science, and the Review of Economic Studies.

Steven Nahmias ("On Ordering Perishable Inventory When Both Demand and Lifetime are Random") is an Associate Professor of Operations Research in the Industrial Engineering Department at the University of Pittsburgh. He holds a B.A. in math and physics from Queens College, a B.S. in industrial engineering from Columbia University and M.S. and Ph.D. degrees in operations research from Northwestern University. Dr. Nahmias is currently serving as Chairman of the ORSA Student Affairs Committee, and is a member of both ORSA and TIMS.

George E. Slater ("Optimization of Petroleum and Natural Gas Production") was Associate Professor of Petroleum and Natural Gas Engineering at the Pennsylvania State University. He holds a B.A. in Arts and Letters as well as an M.S. and Ph.D. degrees in petroleum and natural gas engineering, all from Penn State. He is presently Director, Reservoir Applications, Gulf Research and Development Company.

Edward A. Stohr ("A Dynamic Programming Algorithm for Check-Sorting") is an Assistant Professor at the Graduate School of Management, Northwestern University. He holds a bachelors degree in civil engineering from the University of Melbourne and an M.B.A. and Ph.D. in business administration from the University of California, Berkeley. He has published in several journals.

Stelios H. Zanakis ("Heuristic 0-1 Linear Programming: An Experimental Comparison of Three Methods") is Associate Professor of Industrial Engineering and Systems Analysis at the West Virginia College of Graduate Studies. He holds a diploma in mechanical/electrical engineering from the National Technical University of Athens, Greece and an M.B.A., M.A. in statistics and Ph.D. in business administration (management science) from the Pennsylvania State University. He has presented papers and organized sessions on optimization and statistics at recent ORSA/TIMS and AIDS meetings. Professor Zanakis is a member of AIDS, AIIE, ORSA and TIMS.
