With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Yair M. Babad ("Optimization of the Arbitrage Process in Advance Refunding of Municipal Bonds") is a manager at the Technical Services Division of Arthur Andersen & Co., Chicago, Illinois 60602. He holds a B.S. in Mathematics and Statistics, and an Actuarial Diploma from the Hebrew University, Jerusalem. He also holds an M.S. and Ph.D. in operation research from Cornell University. His papers have appeared in several leading journals, such as *CACM*, *JACM*, *Simuletter* and *Management Science*. He has consulted for both government and industry for several years, and was an Assistant Professor at the Graduate School of Business, the University of Chicago. He is currently a member of TIMS, ORSA, ACM.

Bala Ganga Dharan ("Algoristics for Single-Machine Sequencing with Precedence Constraints") is Assistant Professor of Accounting and Information Systems at Northwestern University, Evanston, Illinois 60201. He received an M.B.A. from Indian Institute of Management, Ahmedabad, and an M.S. from Carnegie-Mellon University, where he is currently completing his Ph.D. in Accounting. His research has ranged from "Information System design using AI Techniques" to "Investigation of Earnings Forecasting Models."

Bharat T. Doshi ("A Production-Inventory Control Model with a Mixture of Back-Orders and Lost-Sales") is an assistant professor in the Department of Statistics, Rutgers University, New Brunswick, New Jersey 08903. He holds a B.S. in Engineering from I.I.T., Bombay and an M.S. and a Ph.D. degree in Operations Research from Cornell University. His papers have appeared in several professional journals. He is a member of ORSA and TIMS.

F. A. van der Duyn Schouten ("A Production-Inventory Control Model with a Mixture of Back-Orders and Lost-Sales") is a research staff member at the Free University in Amsterdam, Holland. He holds a M.Sc. in Mathematics from the same institution. His publications have appeared in various professional journals. His current research interests include inventory and production problems and weak convergence of decision processes. He is a member of the Netherlands Society for Statistics and Wiskundig Genootschap.

Phillip Ein-Dor ("Organizational Context and the Success of Management Information Systems") is a Senior Lecturer at the Leon Recanati Graduate School of Business Administration, Tel-Aviv University, Tel-Aviv, Israel. He received a B.A. from Hebrew University of Jerusalem and M.Sc. and Ph.D. degrees from Carnegie-Mellon University. A member of ACM, SMIS, and TIMS, he has

published a number of articles on computer system management and management information systems. He is co-author of *Managing Management Information Systems*. (Heath, Lexington, Mass, 1978).

Peter T. Ittig ("A Model for Planning Ambulatory Health Services") is Associate Professor of Public Administration, Graduate School of Public Administration, New York University, New York, New York 10003. His research and consulting interests are primarily in the areas of planning and evaluation of health systems and in health policy analysis. During the 1975-1976 academic year, he was on leave of absence from his academic appointment to work as a Faculty Fellow in the Office of Planning Evaluation and Legislation, Health Services Administration, U.S. Department of Health, Education and Welfare. He received his Ph.D. from Cornell University in Public Systems Planning and Analysis.

Ram B. Kulkarni ("Adaptive Forecasting Models Based on Predictive Distributions") is a Project Engineer with Woodward-Clyde Consultants in San Francisco, California. He received his M.S. and Ph.D. in civil engineering from Stanford University. He has authored or coauthored several papers and reports on pavement management systems and seismic risk analysis. He is a member of ASCE and EERI.

Richard D. McBride ("A Spike Collective Dynamic Factorization Algorithm for the Simplex Method") is Assistant Professor of Decision Sciences in the School of Business Administration at the University of Southern California, Los Angeles, California 90007. He received a B.S. and M.A. in Mathematics from Arizona State University and a Ph.D. in Applied Mathematics from U.C.L.A. He is a member of TIMS, ORSA and the Mathematical Programming Society.

Thomas E. Morton ("Algoristics for Single-Machine Sequencing with Precedence Constraints") is an Associate Professor of Industrial Administration at Carnegie-Mellon University, Pittsburgh, Pennsylvania 15213. He received a B.S. in mathematics from California Institute of Technology, an M.S. in mathematics, an M.B.A. in business (economics) and a Ph.D. in business (operations research) all from the University of Chicago. His published works have appeared in numerous professional journals.

Thomas R. Rice ("The Value of Data for a Quadratic Decision Problem") is a Principal with Applied Decision Analysis, Inc., Palo Alto, California, a consulting and contract research firm. He holds a B.S.M.E. from Stanford University, an M.S.M.E. from Massachusetts Institute of Technology, and a

Ph.D. in Engineering-Economic Systems from Stanford University. His research interest centers on the development of efficient computational techniques. His recent project work includes determination of the economic impact of large energy projects such as liquified natural gas and high Btu coal gas.

Eli Segev ("Organizational Context and the Success of Management Information Systems") is a Senior Lecturer of Business Administration in the Faculty of Management-The Leon Recanati Graduate School of Business Administration, Tel-Aviv University, Tel-Aviv, Israel. He received his B.Sc. in Industrial Engineering and Management from Technion, Israel Institute of Technology, M.B.A. from Tel-Aviv University and D.B.A. from Harvard Business School. He has published extensively in the areas of strategic decision making and management information systems, and co-authored *Managing Management Information Systems* (Heath, Lexington, Mass., 1978).

Wayne S. Smith ("Adaptive Forecasting Models Based on Predictive Distributions") is a Project Engineer at Woodward-Clyde Consultants, Environmental Systems Division, San Francisco, California. He received his B.S. and M.S. in civil engineering from the University of California, Davis, and a Ph.D. in civil engineering from the University of California, Berkeley. He has published several papers on pavement management systems, materials characterization, and subjective probability assessments. He is a member of ASCE and a registered engineer in California.

Paul D. Spear, Jr. ("Optimization of the Arbitrage Process in Advance Refunding of Municipal Bonds") a retired naval officer, is a Ph.D. candidate at Northwestern University, Evanston, Illinois 60201. He is a lecturer in the evening division of Northwestern University and is currently engaged in research in the municipal sector concerning the proper role of municipal bond insurance. He is employed in the private sector by an independent professional firm of consultants advising municipal debt issues, seeking to minimize debt service costs.

A. J. J. Talman ("A Production-Inventory Control Model with a Mixture of Back-Orders and Lost-Sales") is a research staff member at the Free University in Amsterdam, Holland. He holds a M.Sc. in Econometrics from the University of Groningen, Holland. His current research interests include inventory and production problems and fixed point algorithms with applications to game-theory. He is a member of the Netherlands Society of Statistics and Wiskundig Genootschap.

Pentti Vartia ("An Approach to Solving Multiple Criteria Macroeconomic Policy Problems and an Application") holds a Dr. Pol.Sc. degree in Economics (University of Helsinki) and a M.Sc., Aeron.Eng., degree in

Engineering (Institute of Technology, Espoo). Formerly an Associate Professor of Economics at the University of Helsinki, he is currently the research director of the Research Institute of the Finnish Economy. He has published several studies on empirical macroeconomic problems, income distribution, and methodological problems of econometrics. He has acted as the chairman of the Executive Committee of the Finnish Society for Economic Research and is a member of the Steering Committee of Association d'Instituts Européens de Conjoncture Economique.

Hannele Wallenius ("An Approach to Solving Multiple Criteria Macroeconomic Policy Problems and an Application") holds a M.Sc. degree in Economics (University of Helsinki) and is a Ph.D. candidate at the University of Helsinki, Helsinki, Finland. Her research interests include the application of multiple criteria optimization models to solving problems associated with macroeconomic policy.

Jyrki Wallenius ("An Approach to Solving Multiple Criteria Macroeconomic Policy Problems and an Application") holds a DBA degree in Managerial Economics (Helsinki School of Economics and Business Administration) and has recently accepted an appointment at the Vaasa School of Economics in Finland. He has published several papers in the field of multiple criteria decision making. He is a member of TIMS.

William E. Wecker ("Predicting Demand from Sales Data in the Presence of Stock-outs") is Associate Professor of Statistics and Management Science at the Graduate School of Business, University of Chicago, Chicago, Illinois 60637. He holds a B.S. from the USAF Academy and M.S. and Ph.D. from the University of Michigan. He has published in *Management Science*, the *Journal of the American Statistical Association* and various other professional journals. He is a member of TIMS, ORSA, and the American Statistical Association.

Robert L. Winkler ("Adaptive Forecasting Models Based on Predictive Distributions") is Professor of Quantitative Business Analysis in the Graduate School of Business at Indiana University, Bloomington, Indiana 47401. He received a B.S. from the University of Illinois and a Ph.D. from the University of Chicago, and he has held visiting positions at the University of Washington, the International Institute for Applied Systems Analysis, and Stanford University. He is the author of two books and numerous journal articles. His primary research interests involve probability forecasting, Bayesian inference, and statistical decision theory. He serves as Associate Editor for four professional journals and is Advisory Editor for Holt, Rinehart and Winston's Series in Quantitative Methods for Decision Making.
