With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

NOTES ABOUT AUTHORS

Salah E. Elmaghraby ("The Economic Lot Scheduling Problem (ELSP): Review and Extensions") is currently University Professor of Operations Research and Industrial Engineering, and Director, Graduate Program in Operations Research, at North Carolina State University at Raleigh. Prior to joining N. C. State University, he was Associate Professor in the Department of Administrative Sciences at Yale University (1962–1967), and prior to that, research leader at the Western Electric Engineering Research Center, Princeton, N. J. (1958–1962). He earned his baccalaureate degree in Mechanical Engineering from Cairo University, his M.Sc. from Ohio State University and his Ph.D. from Cornell University. He has published four books, three as author, including the recent *Activity Networks*, and one as editor. He has over forty papers to his credit in scientific journals and proceedings of symposia, and is co-editor of the *Handbook of Operations Research*. He is currently Departmental Editor of the IE Transactions for the area of Production Planning and Scheduling. He was the recipient of the AIIE distinguished research award, 1970.

Earl O. Heady ("A Spatial Equilibrium Model for Evaluative Alternative Policies for Controlling Sediment from Agriculture") is distinguished Professor of Economics and Director of the Center for Agricultural and Rural Development, Iowa State University; B.Sc. and M.Sc., University of Nebraska; Ph.D., Iowa State University; Dr. Sc., University of Nebraska and University of Upsalla. Author and co-author of 600 articles and 18 books. Member of American Academy of Arts and Science, Royal Swedish Academy of Science and Hungarian Academy of Science.

David S. P. Hopkins ("Interactive Preference Optimization for University Administrators") is Senior Staff Associate in the Academic Planning Office, Stanford University, and Lecturer in Stanford's Graduate School of Business. He holds a Ph.D. in operations research from Stanford, an M.S. in statistics, also from Stanford, and an A.B. in biology from Harvard University. He is author or co-author of approximately fifteen articles in *Management Science*, *Operations Research*, and other professional journals, and co-editor of a volume on the New Directions for Institutional Research series.

William F. Massy ("Interactive Preference Optimization for University Administrators") is Vice President for Business and Finance and Professor of Business Administration at Stanford University. He received his Ph.D. in economics from MIT, an M.S. in industrial management from MIT, and a B.S. in industrial administration from Yale University. He is author or co-author of six books and approximately fifty journal articles. His most recent books are: *Marketing Management*,

Market Segmentation, An Econometric Approach to a Marketing Decision Model and *Stochastic Models of Buying Behavior*. He is a principal and member of the Board of Directors of Management Analysis Center, Inc. He is a member of TIMS (formerly President of the Marketing College), AIDS and the American Marketing Association (formerly Vice-President-Education Division).

Kenneth R. Oppenheimer ("A Proxy Approach to Multi-Attribute Decision Making") is a Decision Analyst with Stanford Research Institute, Menlo Park, California. He received a B.S. in mathematics from Tufts University and an M.S. and Ph.D. in engineering-economic systems from Stanford University. Currently, he is applying decision analysis in the financial sector and is presenting executive and technical seminars in decision analysis.

Richard E. Rosenthal ("Stochastic Dynamic Location Analysis") is Assistant Professor of Management Science at the University of Tennessee, Knoxville. He holds a B.A. (1972) in mathematical sciences from Johns Hopkins and a Ph.D. (1975) in industrial and systems engineering from Georgia Tech. His research interests are in network flows, location theory and nonlinear programming; and he has applications experience in water resources management, production control, personnel scheduling and health care facility location.

Kenneth M. Shachmut ("ARTS PLAN: A Model Based System for Use in Planning a Performing Arts Series") is an Associate in the London office of McKinsey & Company Inc., international management consultants. He received a B.S.E. in electrical engineering from Princeton University and an M.B.A. from Stanford's Graduate School of Business. His principal interests are in strategy development and implementation.

H. Jack Shapiro ("Pay Satisfaction: An Empirical Test of a Discrepancy Model") is the Assistant Executive Officer of the Ph.D. Program in Business and an Associate Professor of Management and Organization at Bernard M. Baruch College of the City University of New York. He received the B.M.E. from the City College of New York, the M.S. in Management Engineering from Long Island University, and both the M.B.A. and the Ph.D. from the City University of New York. He formerly served as President and Chief Executive Officer of Ogden Technology Laboratories, Inc., a wholly owned subsidiary of the Ogden Corporation. He has over 35 publications in journals as widely dispersed as *Decision Sciences*, *Academy of Management Journal*, and *Missile Design and Development*.

Donald R. Smith ("Optimal Repairman Allocation-Asymptotic Results") is Assistant Professor of Operations Research at Columbia University. He obtained a Bachelors

degree in Physics from Cornell University, a Masters degree in Operations Research from Columbia University and Ph.D. in Operations Research from the University of California at Berkeley in 1975. His research interests are in the areas of reliability theory and other applications for stochastic process.

Bert M. Steece ("Forecasting the Product of Two Time Series with a Linear Asymmetric Error Cost Function") is currently at the University of Oregon, Eugene. Before his appointment at Oregon, he was a member of the Technical Staff, Jet Propulsion Laboratory, California Institute of Technology. He received a Ph.D. from the University of Southern California in 1974. He has authored several articles in journals such as *Brometrika*, *Metron*, and *The Statistician*.

James C. Wade ("A Spatial Equilibrium Model for Evaluative Alternative Policies for Controlling Sediment for Agriculture") is Assistant Professor of Agricultural Economics and Assistant Research Scientist, Agricultural Experiment Station University of Arizona, Tucson, Arizona; B.A., Abilene Christian University; M.A., University of Texas at Austin; Ph.D., Iowa State University. His work experience includes Systems Engineering with TRACOR, Inc., Austin, Texas, and the Texas Water Development Board, and staff Economist, Center for Agricultural and Rural Development, Iowa State University.

Mahmoud A. Wahba ("Pay Satisfaction: An Empirical Test of a Discrepancy Model") is the Deputy Executive Officer of the Ph.D. program in Business and a Professor of Management and Organizational Behavior at Bernard M. Baruch College of the City University of New York. He received the M.S. and the Ph.D. at the University of Minnesota. He has over 40 publications in the fields of coalition formation, experimental gaming, equity theory, worker motivation in journals such as *Organization Behavior and Human Performance*, *Journal of Applied Psychology*, *Academy of Management Journal*, and *Decision Sciences*. He is currently completing a book on organization theory.

James B. Ward ("Determining Reorder Points When Demand Is Lumpy") is Director of Operations Research for Pacific Power & Light Company, Portland, Oregon. He received a B.S. in electrical engineering from Colorado State University and a Ph.D. from Purdue University (1949). After 15 years in teaching and research at Purdue, he joined Pacific Power & Light where he has been engaged in research and special studies. He is a registered professional engineer in Indiana and Oregon, and a Fellow in IEEE.

Donald A. Wehrung ("Interactive Preference Optimization for University Administrators") is an Assistant Professor of Management Science and Policy Analysis at the University of British Columbia. He holds a Ph.D. in business and an M.S. in operations research from Stanford and an A.B. in mathematics from Dartmouth College. His re-

search interests are in the areas of preference assessment, interactive optimization, trade-off analysis, and their applications to educational administration. Recent publications have appeared in *Management Science* and *Operations Research*.

Charles B. Weinberg ("ARTS PLAN: A Model Based System for Use in Planning a Performing Arts Series") is Associate Professor of Marketing, Stanford Graduate School of Business. He holds a Sc.B. (Brown), an M.B.A. (Harvard), and a Ph.D. (Columbia) and has taught at N.Y.U. and London Business School. His current research and publications are in the areas of management science and marketing for private and public sector organizations. He is co-author of *Cases in Public and Nonprofit Marketing*.

John A. White ("Stochastic Dynamic Location Analysis") is a Professor in the School of Industrial and Systems Engineering at Georgia Institute of Technology. He received a B.S. in industrial engineering from the University of Arkansas, a M.S. in industrial engineering from Virginia Polytechnic Institute, and a Ph.D. in industrial engineering from The Ohio State University. He is co-author of four books and approximately twenty journal articles. His papers have appeared in *AIIE Transactions*, *International Journal of Production Research*, *Transportation Science*, and *Geographical Analysis*. He is currently Vice President, Systems Engineering and Technical Divisions, American Institute of Industrial Engineers.

Steven D. Wood ("Forecasting the Product of Two Time Series with a Linear Asymmetric Error Cost Function") received his Bachelor's and Master's of Science of Business at California State University at San Diego. His Ph.D. in Business-Quantitative Analysis was received at the University of Wisconsin-Madison. He is an active consultant and researcher in the areas of Health Care, Property Assessment, and Information Systems development and implementation. He has authored several articles in journals such as *Land Economics*, *Health Services Research*, *Journal of the American Dietetic Association*, *Journal of Systems Management* and *Management Datamatics*.

Donovan Young ("Stochastic Dynamic Location Analysis") is Associate Professor of Industrial and Systems Engineering at Georgia Tech, where he is founder and director of the Engineering Decision Methods graduate program for practicing engineers and coordinator of the multidisciplinary program in Urban Engineering. He holds a B.S. in chemical engineering and a Ph.D. in mechanical engineering from The University of Texas at Austin. He has published articles on pollution control, probabilistic cash flow models and simulation. His current research interests are in probabilistic decision models, large-scale computer applications and decision support systems.
