With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

## ABOUT AUTHORS

**Suresh Chand** ("Planning Horizon Procedures for Machine Replacement Models") is a Ph.D. candidate in Industrial Administration at Carnegie-Mellon University, Pittsburgh, Pennsylvania 15213. He received B.Tech. and M.Tech. in Mechanical Engineering from Indian Institute of Technology, Kanpur, India and M.S. in Industrial Engineering from University of Texas at Arlington. He has worked as a Research Associate at Indian Institute of Management, Ahmedabad, India. His current research interests are in the area of developing planning horizon models for various Inventory and Cash Balance problems.

**Miki Johnson** ("An Allocation Model for Catalog Space Planning") is a doctoral candidate in marketing at Northwestern University, Evanston, Illinois 60201. She spent eight years at Montgomery Ward as Operations Research Project Manager and as Marketing Research Manager. She has been a systems engineer for IBM, as well as lecturer, research engineer, and systems programmer for Northwestern University. She received a B.A. in mathematics from Vanderbilt University and an M.S. in computer sciences from Northwestern. Her current research involves a model-based approach to marketing planning.

**Gary L. Lilien** ("ADVISOR 2: Modeling the Marketing Mix Decision for Industrial Products") is Associate Professor of Management Science at the Sloan School of Management, MIT, Cambridge, Massachusetts 02139. He holds a B.S., M.S. and D.E.S. (1973), all from Columbia University. Prior to coming to MIT, he worked in the Management Sciences Department at Mobil Oil for 5 years. His main area of interest is management sciences applications in marketing and he has numerous publications in that and related areas. He is a member of the American Marketing Association, the American Statistical Society, ORSA, TIMS and AAAS. He is associate editor of *Management Science* and the *Journal of Marketing*.

**Robert F. Love** ("Mathematical Models of Road Travel Distances") is Professor of Management Science at McMaster University and the Graduate School of Business of the University of Wisconsin, Madison, Wisconsin 53706. He received a B.A.Sc. in industrial engineering from the University of Toronto, an M.B.A. in business administration from the University of Western Ontario, and a Ph.D. in management science and production from Stanford University. He has been on the faculties of the University of California, Berkeley, University of Western Ontario and the University of Waterloo, and has also served as research and development engineer at Anthes-Imperial and as operations research analyst at the Ampex Corporation. He has published over 30 papers and is a member of

TIMS and the Canadian Operational Research Society. His research interests include the formulation and solution of location-allocation models, concave minimization algorithms, queueing and inventory models, and integer programming methods.

**James G. Morris** ("Mathematical Models of Road Travel Distances") is Visiting Associate Professor of Business, University of Wisconsin, Madison, Wisconsin 53706. He is on leave from the Graduate School of Business Administration, Kent State University. He received a B.B.A. and an M.B.A. from the University of New Mexico and a Ph.D. in Operations Research from the University of Wisconsin-Madison. He has published in *Operational Research Quarterly*, *Naval Research Logistics Quarterly*, *Operations Research*, *Transportation Science*, and *The Journal of the Operational Research Society*.

**Richard A. Murphy** ("Optimal Construction of Experimental Clusters") is currently an Associate Professor in the Quantitative Analysis Department at the University of Cincinnati, Cincinnati, Ohio 45221. He has ten years experience as an operations research specialist and industrial engineer. His current research interests are in the areas of availability/reliability analysis applied to production systems, mathematical programming, and the application of mathematical programming to business problems. He is a member of AIIE, ORSA, and TIMS and has published in the *AIIE Transactions*, *International Journal of Systems Science*, *Operations Research*, and *Technometrics*.

**Eginhard J. Muth** ("The Reversibility Property of Production Lines") is Professor of Industrial and Systems Engineering at the University of Florida, Gainesville, Florida 32611. He received a Diplom-Ingenieur Degree in Electrical Engineering from the University of Karlsruhe and his M.S. and Ph.D. in System Science from the Polytechnic Institute of Brooklyn. His research interests include reliability models and material handling processes. He has published in a number of professional journals and is the author of the book, *Transform Methods with Applications to Engineering and Operations Research*.

**Dan B. Rinks** ("An Application of the Blin-Whinston Algorithm for Resolving Fuzzy Group Preferences") is Assistant Professor of Management at West Virginia University, Morgantown, West Virginia 26506. He holds a B.S. in aerospace engineering from the University of Alabama-Tuscaloosa, has done graduate work in business administration at the University of Texas at Arlington, and is currently a doctoral candidate in Quantitative Management Science at the University of Houston. His current research interests are in the areas of production planning and the

application of fuzzy sets for heuristic modeling of managerial decision making. He is a member of TIMS, ORSA, AIDS, and the American Marketing Association.

**Suresh Sethi** ("Planning Horizon Procedures for Machine Replacement Models") is Professor of Management Science at the Faculty of Management Studies, University of Toronto, Toronto, Ontario, Canada. He received the B. Tech. degree in Mechanical Engineering from the Indian Institute of Technology, Bombay, India; the M.B.A. degree from Washington State University, Pullman; and the M.S. and Ph.D. degrees in Industrial Administration and Operations Research from Carnegie-Mellon University. In 1972, he was a Visiting Research Associate at the Department of Operations Research at Stanford University and during 1972-73 he was a Visiting Assistant Professor at Rice University, Houston, Texas. He visited Carnegie-Mellon during December 1977-July 1978. He is currently an Associate Editor for *INFOR*. He is author of over fifty articles on applied optimal control, operations management, marketing, finance, and economics. He is a member of TIMS, ORSA and several other societies.

**Prabhakant Sinha** ("An Allocation Model for Catalog Space Planning") is Assistant Professor of Quantitative Business Analysis at the University of Georgia, Athens, Georgia 30602. He has contributed to *Management Science*, *Operations Research*, and *Mathematical Programming*. His research interests are in resource allocation in menu planning and marketing.

**Earle Steinberg** ("An Application of the Blin-Whinston Algorithm for Resolving Fuzzy Group Preference") is Assistant Professor of Operations Management at the University of Houston, Houston, Texas 77004. He holds a BA in Psychology from Boston University, MBA, MDS and Ph.D. degrees from Georgia State University. He has published in *Operational Research Quarterly*, *OMEGA*, *Kybernetes and Logistics* and *Transportation Review*, and is also a member of TIMS, ORSA, AIDS, and APICS.

**Ronald L. Tatham** ("Optimal Construction of Experimental Clusters") is Director of

Quantitative Analysis and a member of the Professional Services Division at Burke Marketing Research, Inc. His responsibilities include technical consultation and the development of analytical systems and software. He has, in the past, served on the Graduate Business Faculty at Arizona State University, where his primary area of specialization was research design and analysis. He has also served as a Professor at the University of Cincinnati and Kent State University. He holds a B.B.A. degree from the University of Texas at Austin, an M.B.A. from Texas Tech University and a Ph.D. from the University of Alabama. His research papers have appeared in the *Journal of Marketing Research*, *Journal of the Market Research Society*, *Business Horizons*, *Management Science* and others.

**Raymond E. Willis** ("A Simulation of Multiple Selection Using Nominal Group Procedures") is Associate Professor of Management in the College of Business Administration, University of Minnesota, Minneapolis, Minnesota 55455. He received his B.S. from Rensselaer Polytechnic Institute, and M.B.A. from Boston University, and Ph.D. in Economics from M.I.T. His publications and research are in the areas of forecasting, planning, and research methodology.

**Andris A. Zoltners** ("An Allocation Model for Catalog Space Planning") is an Associate Professor of Marketing in the Graduate School of Management at Northwestern University, Evanston, Illinois 60201. He received an M.S. in mathematics from Purdue University and an M.S. and Ph.D. in industrial administration from Carnegie-Mellon University. His major research interest is in the application of management science concepts and computer-oriented decision systems in marketing. He is currently designing, implementing, and testing several planning systems with a number of large U.S. firms. His research articles have appeared in several journals including *Management Science*, *Journal of Marketing Research*, *Journal of Marketing*, *Operations Research*, *Mathematical Programming*, and *ACM*.
