With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Eric Brodheim ("PBDS: A Decision Support System for Regional Blood Management") is Vice President of Systems, Planning and Operations and Investigator at the Operations Research Laboratory of the New York Blood Center, New York, New York 10021. He holds a B.E.E. from the City University of New York, and an M.S. and Sc.D. in Operations Research from Columbia University. He has been chairman of national and international committees on blood banking automation, and is the recipient (with G. P. Prastacos) of the 1979 International Management Science Achievement Award. His current research interests are in computer information systems, and the automation of blood processing. His papers have appeared in *Operations Research*, *Management Science*, *Comp. & Ops. Research*, *Interfaces* and *Transfusion*. He is a member of TIMS.

Harlan Crowder ("Solving Large-Scale Symmetric Travelling Salesman Problems to Optimality") is a member of the Optimization Group in the Mathematical Sciences Department at the IBM Thomas J. Watson Research Center, Yorktown Heights, New York 10541. He received the B.S. in Chemistry in 1968 from East Texas State University and the M.S. in Operations Research from New York University in 1973. He has been on the staff at IBM Research since 1968. His research interests are primarily in the areas of mathematical programming and optimization with emphasis on the computational aspects of problem solving methods. He is a member of the Association for Computing Machinery, the ACM's Special Interest Group for Mathematical Programming, and the Mathematical Programming Society. He is a member of the Committee on Algorithms of the Mathematical Programming Society, and a member of the ACM SIGPLAN Technical Committee on APL (STAPL).

John Glen ("A Mathematical Programming Approach to Beef Feedlot Optimization") is a lecturer in Operational Research in the Department of Business Studies, University of Edinburgh, Edinburgh, Scotland. He holds a B.Sc. in Physics from Glasgow University and an M.Sc. in Operational Research from Strathclyde University. He has published papers on work scheduling and manpower planning. He is a member of the Operational Research Society and is secretary of the Operational Research Group of Scotland.

Peter Kolesar ("Testing for Vision Loss in Glaucoma Suspects") is a Professor in the Graduate School of Business and the School of Engineering and Applied Science at Co-

lumbia University, New York, New York 10027. He is an Associate Editor of both *Management Science* and *Operations Research*. His research frequently deals with problems in the public sector and uses a variety of OR/MS tools. Among his current research interests are numerical credit screening, applications of search theory, and logistics management. He is a frequent consultant to industry and government on OR/MS and statistical problems.

John A. Muckstadt ("Are Multi-Echelon Inventory Systems Worth Implementing in Systems with Low-Demand-Rate Items?") is currently an Associate Professor at the School of Operations Research and Industrial Engineering, Cornell University, Ithaca, New York 14853. He received a Ph.D. from the University of Michigan. His main area of interest is multi-echelon inventory and production planning and control problems. He is consultant to numerous industrial and governmental organizations. He is an Associate Editor of the *Naval Research Logistics Quarterly*.

L. Nazareth ("A Land Management Model Using Dantzig-Wolfe Decomposition") received his B. A. in Mathematics from Trinity College, Cambridge University and his M.Sc. (Operations Research) and Ph.D. (Computer Science) from the University of California at Berkeley. He has held appointments at Argonne National Laboratory and Stanford University and is currently engaged in consulting work in a private capacity.

Manfred W. Padberg ("Solving Large-Scale Symmetric Travelling Salesman Problems to Optimality") is professor of quantitative analysis at the Graduate School of Business Administration of New York University, New York, New York 10006. Prior to joining NYU in 1974 he had been affiliated with the International Institute of Management in West Berlin and the University of Mannheim (West Germany). He holds a B.S. and M.S. in Mathematics from the University of Muenster (West Germany) and a M.S. and Ph.D., both in Industrial Administration, from Carnegie-Mellon University. He has authored and coauthored over fifty papers in the area of management science and is the editor of a book *Combinatorial Optimization* to be published by North-Holland in 1980. He is a member of ORSA and the Mathematical Programming Society and is an Associate Editor for *Mathematical Programming* and *Mathematical Programming Studies*.

Gregory P. Prastacos ("PBDS: A Decision Support System for Regional Blood Management") is Assistant Professor of Decision Sci-

ences at the Wharton School, University of Pennsylvania, Philadelphia, Pennsylvania 19104. He holds a B.S. and an M.S. in Computer Science, and an Sc.D. in Operations Research, all from Columbia University, and is the recipient (with E. Brodheim) of the 1979 International Management Science Achievement Award in the TIMS competition on the practice of Management Science. His current research interests are in perishable inventory theory and blood management, economics of regionalization, stochastic optimization models, and the design of decision support systems. His papers have appeared in *Operations Research*, *Management Science*, *II Operational Research Soc.*, *Comp. & Ops. Research*, *Interfaces* and *Transfusion*. He is a member of TIMS, ORSA, HELORS and AAAS.

David J. Teece ("The Diffusion of an Administrative Innovation") is Associate Professor of Business Economics, Graduate School of Business, Stanford University, Stanford, California 94305. His publications include, "Vertical Integration and Technological Innovation," *Review of Economics and Statistics*, 1980 and "Organizational Structure and Economic Performance: A Test of the M-Form Hypothesis," *Bell Journal of Economics*, Spring, 1978.

L. Joseph Thomas ("Are Multi-Echelon Inventory Systems Worth Implementing in Systems with Low-Demand-Rate Items?") is Professor of Production and Quantitative Analy-

sis and Director of The Executive Development Program at the Graduate School of Business and Public Administration, Cornell University, Ithaca, New York 14853. He has a B.S. in chemical engineering from Carnegie-Mellon University and a Ph.D. in operations research from Yale University. His previous articles have appeared in *Management Science*, *Operations Research*, *Decision Science* and several other journals, and he has co-authored three books, including *Operations Management: Production of Goods and Services*, Prentice-Hall, 1980. He has taught at Stanford University and the Catholic University of Louvain, Belgium, and he is a member of TIMS, ORSA, AIDS and AIIE.

Russell S. Winer ("Estimation of a Longitudinal Model to Decompose the Effects of an Advertising Stimulus on Family Consumption") is an Assistant Professor in the Graduate School of Business, Columbia University, New York, New York 10027. He received a B.A. from Union College (N.Y.) and an M.S. and Ph.D. in Industrial Administration from Carnegie-Mellon University. His research has been published in the *Journal of Business*, *Journal of Marketing Research*, and *Decision Sciences*. He is a member of TIMS, ASA, the Econometric Society and the American Marketing Association. His current research is in the areas of modeling dynamic market structures, market segmentation, and analysis using consumer panel data.
