With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

O. A. Bakken ("Applying Classical Control Theory to Energy-Economics Modeling—A Tool to Explain Model Behavior in Response to Varied Policy Decisions and Changing Inputs") received his doctorate from the University of Washington in 1978 while currently an employee of the Boeing Company. He is now a system engineering manager for Boeing Engineering and Construction Company in Norway working on offshore platform systems in the North Sea.

Gerald G. Brown ("Real-Time Dispatch of Petroleum Tank Trucks") is an Associate Professor of Operations Research and Computer Science at the Naval Postgraduate School, Monterey, California 93940. He earned his Ph.D. from the University of California, Los Angeles, and is a contributing member of ACM, ASA, ORSA, and TIMS.

Marshall Fisher ("The Lagrangian Relaxation Method for Solving Integer Programming Problems") is Professor of Decision Sciences, The Wharton School, University of Pennsylvania, Philadelphia, Pennsylvania 19104. He holds an S.B., S.M., and Ph.D. (in operations research), all from M.I.T. He is the author of about 30 published papers in management science and serves as a Departmental Editor of *Management Science* and an Editor of the new *SIAM Journal of Algebraic and Discrete Methods*. He shared the 1977 Lanchester Prize for his work on analysis of heuristics and optimization methods for location problems.

Glenn W. Graves ("Real-Time Dispatch of Petroleum Tank Trucks") is a Professor of Quantitative Methods at the Graduate School of Management, University of California, Los Angeles, California 90024. He received his degrees in mathematics from Western Michigan University (B.A.), Michigan State University (M.A.) and the University of Michigan (Ph.D.). He is a member of AMS and TIMS. He received the 1964 ONR/TIMS prize in Networks, Scheduling and Combinatorial Methods, and shared with a co-author the 1974 ORSA Lanchester Prize honorable mention and a 1976 NATO Systems Science Prize.

Linda Green ("Comparing Operating Characteristics of Queues in which Customers Require a Random Number of Servers") is Assistant Professor at the Graduate School of Business, Columbia University, New York, New York 10027. She received a B.S. from the City College of New York, an M.S. from Courant Institute of Mathematical Sciences, N.Y.U., and a Ph.D. from Yale University. She is a

member of TIMS and ORSA, and a council member of the ORSA/TIMS Special Interest Group in Applied Probability. She is the author of several papers on queueing theory and applied stochastic processes.

Ronald M. Harstad ("Expected-Utility-Maximizing Price Search with Learning") is an Assistant Professor of Economics at the University of Illinois at Urbana-Champaign, on leave to the University of British Columbia, Vancouver, British Columbia V6T 1W5, Canada, during 1980–81 when the revised version was submitted. He received his Ph.D. from the University of Pennsylvania in 1977. Current research interests include informationally decentralized systems, experimental tests of allocation theory, and equilibrium models with government involvement.

John R. Hauser ("Profit Maximizing Perceptual Positions: An Integrated Theory for the Selection of Product Features and Price") is an Associate Professor of Management Science at the Massachusetts Institute of Technology, Cambridge, Massachusetts 02139. He received an S.B. and S.M. (Electrical Engineering), S.M. (Transportation) and an Sc.D. (Operations Research) from M.I.T. He previously served on the faculty of Northwestern University. His previous publications have appeared in *Operations Research*, *Management Science*, *Journal of Marketing Research*, *Journal of Consumer Research*, *Journal of Business*, *Applications in Management Science*, *Transportation Research Record*, and various marketing and transportation proceedings. He is a member of ORSA, TIMS and AMA. He is co-author of a book on the *Design and Marketing of New Products*. His current research interests include defensive strategies in product policy, probabilistic models of consumer behavior, hierarchical structures of consumer preference, and forecasting the adoption of new technology.

Ronald W. Hilton ("The Determinants of Information Value: Synthesizing Some General Results") has a Ph.D. from Ohio State and is an Assistant Professor of Accounting in the Graduate School of Business and Public Administration, Cornell University, Ithaca, New York 14853. His primary research interest is in information economics. He has published other articles on related topics in the *Journal of Accounting Research*.

Robin M. Hogarth ("The Value of Decision Making in a Complex Environment: An Experimental Approach") is Associate Professor of Behavioral Science, Graduate School of

Business, University of Chicago, Chicago, Illinois 60637. He formerly held appointments at INSEAD, Fontainebleau, France and the London Business School. He received his Ph.D. degree from the University of Chicago in 1972. His research centers on the psychology of judgment and decision making processes and theories of rationality and inference. He has published two books and papers in several journals including *Journal of the American Statistical Association*, *Journal of Business*, *Behavioral Science*, *Psychological Bulletin*, *Psychological Review* and *Organizational Behavior and Human Performance*.

Spyros Makridakis ("The Value of Decision Making in a Complex Environment: An Experimental Approach") is Professor of Management Science at INSEAD, 77305 Fontainebleau, France. He received his degree from the School of Industrial Studies in Greece and his M.B.A. and Ph.D. from New York University. He has published extensively in the areas of general systems and forecasting and has coauthored *Computer-Aided Modeling for Managers* (Addison-Wesley, 1972), *Forecasting Methods for Management*, Third Edition (Wiley, 1979), *Interactive Forecasting*, Second Edition (Holden-Day, 1978), and *Forecasting: Methods and Applications* (Wiley-Hamilton, 1978). He has also been the coeditor of Vol. 12 of *TIMS Studies in Management Science*.

B. W. Mar ("Applying Classical Control Theory to Energy-Economics Modeling—A Tool to Explain Model Behavior in Response

to Varied Policy Decisions and Changing Inputs") is Associate Dean of the College of Engineering, and Professor of Civil Engineering at the University of Washington, Seattle, Washington 98195.

Andrew Postlewaite ("Expected-Utility-Maximizing Price Search with Learning") is a Professor of Legal Studies and Public Management in the University of Pennsylvania's Wharton School, Philadelphia, Pennsylvania 19104. He has also taught at the University of Illinois at Urbana-Champaign, Princeton University, and the University of California at San Diego, and has been a Senior Research Fellow at the Center for Operations Research and Econometrics, Universite Catholique de Louvain. Author of numerous publications in scholarly journals in economics, Postlewaite counts implementation of allocation mechanisms and equilibrium impacts of information structures among his varied research interests.

Patricia Simmie ("Profit Maximizing Perceptual Positions: An Integrated Theory for the Selection of Product Features and Price") is an Assistant Professor of Marketing at York University in Toronto, Ontario, Canada. She received a B.A. degree from the University of Manitoba, and M.M. and Ph.D. degrees (Management) from Northwestern University. She is a member of TIMS and the American Marketing Association. Current research interests include impacts of competitive activities on new product design problems, and methodological issues in new product design.
