With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Kenneth R. Chelst ("Deployment of One- vs. Two-Officer Patrol Units: A Comparison of Travel Times") is an Associate Professor, Department of Industrial Engineering and Operations Research, Wayne State University, Detroit, Michigan 48202. He received a B.A. degree from Yeshiva College, an M.S. degree from N.Y.U., and a Ph.D. from M.I.T. He has contributed to *Operations Research*, *Computers and Operations Research*, *Management Science*, as well as others. He is a member of TIMS and ORSA and founding member of the Criminal Justice SIG of ORSA. His current research is concerned with the merger of police, fire, and emergency medical services into a public safety department.

Kamal Golabi ("Selecting a Portfolio of Solar Energy Projects Using Multi-attribute Preference Theory") is a member of the decision analysis group at Woodward-Clyde Consultants, San Francisco, California 94111. He received a B.S. in petroleum/chemical engineering from Abadan Institute of Technology, Iran, an M.S. in Operations Research from University of California, Berkeley and a Ph.D. in Management Science from UCLA. His research interests include optimization of multiobjective problems, inventory theory and extraction policies for exhaustible resources.

Charles M. Harvey ("Conditions on Risk Attitude for a Single Attribute") is an Associate Professor in the Department of Mathematical Sciences, Dickinson College, Carlisle, Pennsylvania 17013. He has recently held positions as a Visiting Associate Professor in the Department of Mathematical Sciences and the Jones Graduate School of Administration at Rice University (1977-78), and as an Operations Research Analyst (IPA) in the National Highway Traffic Safety Administration (1979-80). He is the author of *Operations Research: An Introduction to Linear Optimization and Decision Analysis* published by North-Holland in 1979. For his work on decision analysis models for highway traffic safety, he is the recipient of an IPA Certificate of Recognition (1980). His current research interests are in multiattribute group decision models, and the use of such models in regulatory decision making.

Robin M. Hogarth ("Forecasting and Planning: An Evaluation") is Associate Professor of Behavioral Science, Graduate School of Business, University of Chicago, Chicago, Illinois 60637. He formerly held appointments at INSEAD, Fontainebleau, France and the

London Business School. He received his Ph.D. degree from the University of Chicago in 1972. His research centers on the psychology of judgment and decision making processes and theories of rationality and inference. He has published two books and papers in several journals including *Journal of the American Statistical Association*, *Journal of Business*, *Behavioral Science*, *Psychological Bulletin*, *Psychological Review* and *Organizational Behavior and Human Performance*.

Craig W. Kirkwood ("Selecting a Portfolio of Solar Energy Projects Using Multiattribute Preference Theory") is a member of the decision analysis group at Woodward-Clyde Consultants, San Francisco, California 94111. He has published articles on both theoretical and applied aspects of decision analysis, and is currently applying decision analysis in a variety of situations. He received S.B., S.M., E.E. and Ph.D. degrees from the Massachusetts Institute of Technology.

Spyros Makridakis ("Forecasting and Planning: An Evaluation") is Professor of Management Science at INSEAD, 77305 Fontainebleau, France. He received his degree from the School of Industrial Studies in Greece and his M.B.A. and Ph.D. from New York University. He has published extensively in the areas of general systems and forecasting and has coauthored *Computer-Aided Modeling for Managers* (Addison-Wesley, 1972), *Forecasting Methods for Management*, Third Edition (Wiley, 1979), *Interactive Forecasting*, Second Edition (Holden-Day, 1978), and *Forecasting: Methods and Applications* (Wiley-Hamilton, 1978). He has also been the coeditor of Vol. 12 of *TIMS Studies in the Management Sciences*.

Gary R. Reeves ("Product-Mix Models when Learning Effects Are Present") is an Associate Professor of Management Science at the University of South Carolina, Columbia, South Carolina 29208. He received a D.Sc. in Operations Research from Washington University. His publications in the areas of management science, mathematical programming, multiple criteria decision making, and production and operations management have appeared in *Management Science*, *Decision Sciences*, *OMEGA*, *The Engineering Economist* and other journals. He is a member of TIMS, AIDS and ORSA.

Alan Sicherman ("Selecting a Portfolio of Solar Energy Projects Using Multiattribute Preference Theory") is a Project Engineer at Woodward-Clyde Consultants, Environmental

Systems Division, San Francisco, California 94111. He received his B.S. in Physics and M.S. in Operations Research from MIT. He has authored or coauthored several papers on applications and computer program implementations of multiattribute preference theory.

Gerald I. Susman ("Planned Change: Prospects for the 1980s") is Professor of Organizational Behavior at the Pennsylvania State University, University Park, Pennsylvania 16802. He has a B.A. and M.A. in Psychology and a Ph.D. in Business Administration, all from the University of California, Los Angeles. His articles have appeared in *Administrative Science Quarterly*, *Human Relations*, *Academy of Management Journal*, *Industrial Relations*, among others. He published a book in 1976 entitled *Autonomy at Work: A Sociotechnical Analysis of Participative Management*, Praeger Publishers, New York. His current research interests include strategies for encouraging cooperation among union and management to improve productivity and the quality of working life. This interest has led to his recent publication of *A Guide to Labor-Management Committees in State and Local Government*, Public Technology, Washington, D.C.

James R. Sweigart ("Product-Mix Models when Learning Effects are Present") is an Assistant Professor of Management Science in the College of Business Administration, University of South Carolina, Columbia, South

Carolina 29208. He holds a Ph.D. in urban and public affairs from Carnegie-Mellon University and an M.S. and B.A. in mathematics from Miami University and Elizabethtown College, respectively. His research has appeared in several journals, including *Management Science*, *TIMS Studies in the Management Sciences*, the *Journal of Educational Finance* and the *Journal of Applied Meteorology* and his research interests focus on modeling in policy selection and evaluation, and environmental management and control. He is a member of TIMS, AIDS and ORSA.

Cary Swoveland ("Benefit-Cost Analysis of a Proposed Runway Extension") is president of Quantalytics, Inc., a Vancouver-based management consulting firm. He holds a B.S. in Agricultural Economics from U.C. Berkeley and M.S. and Ph.D. degrees from U.C.L.A. Prior to forming Quantalytics in 1979, he served for five years as a policy advisor with the Canadian Government in Ottawa and before that was an assistant professor in the Faculty of Commerce and Business Administration at the University of British Columbia. He was Director of Economic Analysis and Evaluation at the Canadian Air Transportation Administration when he carried out the study described in this issue. His professional interests are in the application of management science in both the public and private sectors. He has published in the areas of mathematical programming, inventory theory and simulation.
