With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Derek R. Atkins ("Connectedness in Multiple Linear Fractional Programming") is an Associate Professor at the University of British Columbia, Vancouver, B.C., Canada. He holds a mathematics B.A. from Oxford, an M.A. in Operations Research from Lancaster and a Ph.D. in Operations Research from Warwick, England. His current research interests are in operations management and finance. He has published in the *Journal of the Operational Research Society*, *Mathematics of Operations Research*, *Engineering Economist*, and *Journal of Finance*. He is a member of TIMS, CORS and the United Kingdom ORS.

David V. Budescu ("Encoding Subjective Probabilities: A Psychophysical and Psychometric Review") is Lecturer in the Department of Psychology, Haifa University, Israel. He received his Ph.D. in Quantitative Psychology at the University of North Carolina in 1980. His research is in the areas of psychometrics and individual decision making, and he has published works in these domains in several psychology journals. Dr. Budescu is a member of the Psychometric Society.

Suresh Chand ("Rolling Horizon Procedures for the Facilities in Series Inventory Model with Nested Schedules") is an Assistant Professor of Management at the Krannert Graduate School of Management, Purdue University, West Lafayette, Indiana 47907. He received his B.Tech. and M.Tech. in Mechanical Engineering from Indian Institute of Technology, Kanpur; M.S. in Industrial Engineering from The University of Texas; and Ph.D. in Management from Carnegie-Mellon University. His research interests include planning and rolling horizon procedures for production-inventory problems and master production scheduling. He has previously published in *Management Science*, *Operations Research*, *Decision Sciences*, *Naval Research Logistics Quarterly*, and *European Journal of Operational Research*. He is a member of TIMS and APICS.

E. U. Choo ("Connectedness in Multiple Linear Fractional Programming") is on the faculty of the Department of Business Administration, Simon Fraser University, Burnaby, British Columbia, Canada V5A 1S6. He was previously on the faculty of Santa Clara University. His work has appeared in the *Journal of Operational Theory and Applications*.

Darryl J. Downing ("A Diverting Structure's Effects on a River Flow Time Series") works in the Systems Analysis Section of the Mathematics Department, Computer Sciences at Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830. He has served as a statistical consultant to many groups within Oak Ridge National Laboratory while doing basic research in the areas of time series analysis, nuclear safeguards accountability, and data validation. He received the Ph.D. in statistics from the University of Florida and is a member of the American Statistical Association.

Robert W. Haessler ("A 0-1 Model for Solving the Corrugator Trim Problem") is Associate Professor of Policy and Control at The University of Michigan, Graduate School of Business, Ann Arbor, Michigan 48109. He received his Ph.D. in Industrial Engineering at The University of Michigan. Previously, he served as Manager of Operations Planning and Control with the Mead Papers Division of the Mead Corporation. Dr. Haessler's major interest is in the development of heuristic programming based systems to improve resource utilization. He has developed computerized heuristic procedures for solving combinatorial problems in the utilization of space, material and time that are being used by firms in a variety of industries. Professor Haessler is a member of TIMS.

Avishai Mandelbaum ("Optimal Entering Rules for a Customer with Wait Option at an M/G/1 Queue") is a Ph.D. student at Cornell University, Ithaca, New York 14853. He received a B.Sc. in Computer Science, M.A. in Statistics and M.Sc. in Operations Research from Tel Aviv University, Israel. His research interests include probability, stochastic processes and mathematical statistics.

David Pack ("A Diverting Structure's Effects on River Flow Time Series") is a statistician in the Technical Applications Department, Computer Sciences Division of the Union Carbide-operated Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830. He received his B.A. in Mathematics and Economics from the University of Kansas in 1967 and his Ph.D. in Business-Statistics from the University of Wisconsin-Madison in 1973. He was an assistant professor in the College of Administrative Science at Ohio State University from 1972 to 1978. He has played a significant role in the provision of computer programs for the Box-Jenkins time series analysis forecasting method, supplying over one thousand copies of different program versions to academic, business, and government users. He currently serves as an associate editor for the *Journal of Forecasting*. Dr. Pack is a member of TIMS.

Marc E. Posner ("A Transportation Type Aggregate Production Model with Backordering") is Assistant Professor of Operations Research at the Graduate School of Business, New York University, New York, New York 10006. He received a B.A. in Mathematics from Brandeis University, an M.S. and Ph.D. in Operations Research from the University of Pennsylvania. His papers have appeared in *Mathematical Programming*. Current research areas include nonlinear programming, integer programming and scheduling theory. Professor Posner is a member of TIMS.

Barry G. Silverman ("Project Appraisal Methodology. Market Penetration Elements") is Associate Professor of Engineering Administration at the George Washington University,

Washington, D.C. 20052. His research deals with energy environment, and resource policy analysis, project selection, and mathematical modeling. He received his Ph.D., M.S., and B.S. from the University of Pennsylvania, is a member of The Institute of Management Sciences, and has published several papers in his areas of expertise. Current research projects include a simplified model of space data tracking for NASA and power plant emissions modeling for EPA.

Włodzimierz Szware ("A Transportation Type Aggregate Production Model with Back-ordering") is a Professor of Operations Research in the School of Business Administration at the University of Wisconsin-Milwaukee, Milwaukee, Wisconsin 53201. He received his Ph.D. from the University of Wrocław, Poland. His current research interests are machine sequencing and transportation models. His research appeared in *Operations Research*, *Naval Research Logistics Quarterly*, and *Management Science*. He is Associate Editor of *Naval Research Logistics Quarterly* and *Opsearch*.

F. Brian Talbot ("A 0-1 Model for the Corrugator Trim Problem") is Associate Professor of Policy and Control at The Graduate School of Business Administration, University of Michigan, Ann Arbor, Michigan 48109. He received a B.A. in mathematics from The State University of New York at Buffalo, an M.B.A. from The State University of New York at Albany and a Ph.D. in Operations Management from The Pennsylvania State University. His current research focus is on the development of effective scheduling and resource allocation tools. Professor Talbot is a member of TIMS.

Thomas S. Wallsten ("Encoding Subjective Probabilities: A Psychological and Psychometric Review") is a professor in the Psychology Department and the L. L. Thurstone Psychometric Laboratory, University of North Carolina, Chapel Hill, North Carolina 27514. He received the B.S. in 1964 from the University of Wisconsin, and the MA. in 1966 and Ph.D. in 1969 from the University of Pennsylvania. His research includes human information processing, measurement of subjective uncertainty, and risk assessment. He has edited the recent book, *Cognitive Processes in Choice and Decision Behavior*, has published in numerous journals, and is on the editorial boards of *Journal of Experimental Psychology: Learning, Memory, and Cognition* and *Organizational Behavior and Human Performance*.

Gary W. Westley ("A Diverting Structure's Effects on a River Flow Time Series") is head of the Mathematics-Operations Research Department in the Computer Sciences Division of Union Carbide, Nuclear Division in Oak Ridge, Tennessee 37830. He received his M.S. in Mathematics (statistics) at Iowa (1961). He has published in the areas of econometric modeling and nonlinear optimization. His current interests are in time series modeling and multi-criterion optimization.

Uri Yechiali ("Optimal Entering Rules for a Customer with Wait Option at an M/G/1 Queue") is a Professor of Operations Research and Chairman, Statistics Department, Tel Aviv University, Tel Aviv 69978, Israel. He has published extensively in various operations research and management science journals, and his major research interests are in optimization of queueing systems, reliability, and analysis of telecommunication networks. He is a member of TIMS, ORSA and ORSIS.
