With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

## ABOUT AUTHORS

**Allan Paul Andersen** ("Comparing for Different Time Series Methods the Value of Technical Expertise Individualized Analysis, and Judgmental Adjustment") is Senior Lecturer in the Department of Economic Statistics of the University of Sydney, New South Wales, Australia. His Ph.D. is from the University of Queensland. He has coauthored *An Introduction to Bilinear Time Series Models* (Nerlag Vandenhoeck and Ruprecht, 1980) and published articles in *Operational Research Quarterly*, *Journal of Econometrics*, *Journal of Forecasting* and other journals. He is an Associate Editor of the *Journal of Forecasting*.

**James E. Bailey** ("Development of a Tool for Measuring and Analyzing Computer User Satisfaction") is Associate Professor of Industrial and Management Systems Engineering, School of Business, Arizona State University, Tempe, Arizona 85287. He received his B.S., M.S. and Ph.D. from Wayne State University. His current research interests are in the design of effective information and decision support systems as well as production control and scheduling. He is co-author of *Integrated Production Control Systems and Design Concepts for Management Information Systems*. He is a member of TIMS and AIIE.

**Samuel E. Bodily** ("Three-Point Approximations for Continuous Random Variables") is Associate Professor at The Darden Graduate Business School, University of Virginia, Charlottesville, Virginia 22906, specializing in decision analysis, risk analysis, and applications of management science. He received his S.M. and Ph.D. (1976) in Operations Research at M.I.T. His publications have appeared in *Harvard Business Review*, *Journal of Financial and Quantitative Analysis*, *Management Science*, *Operations Research*, *Sloan Management Review*, and elsewhere. Currently he is interested in multiattribute decision and risk analysis for planning, financial analysis, and general corporate management. During Spring, 1983, he is Visiting Associate Professor at the Department of Finance, Business Economics, and Quantitative Methods at the School of Business, University of Washington, Seattle, Washington 98195. He is a member of TIMS and ORSA.

**John L. Bryant** ("Stocking Repair Kits for Systems with Limited Life") is Associate Professor in the Quantitative Analysis Department at the College of Business Administration, University of Cincinnati, Cincinnati, Ohio 45221. His major areas of research interest include the development of applied statistical methodology, and availability/reliability analysis of stochastic models.

**Robert Carbone** ("Comparing for Different Time Series Methods the Value of Technical Expertise Individualized Analysis, and Judgmental Adjustment") is Chairman of the

Department of Management Sciences at la Faculté des Sciences de l'Administration de l'Université Laval, Quebec, Canada G1K 7P4. His Ph.D. is from Carnegie-Mellon University. He has also taught at Ohio State University. His papers have appeared in *Management Science*, *Decision Sciences*, *Journal of Forecasting*, *Atmospheric Environment* and other journals. He is Editor of the *Journal of Forecasting*, a Wiley Interscience Journal, and co-founder of the International Institute of Forecasters. Dr. Carbone is a member of TIMS.

**Yvan Corriveau** ("Comparing for Different Time Series Methods the Value of Technical Expertise Individualized Analysis, and Judgmental Adjustment") is Operational Research Analyst at Air Canada. He holds a B.S. in Computer Science and an M.B.A. from Laval University. He is a member of TIMS, ORSA and the International Institute of Forecasters.

**Paul Piat Corson** ("Comparing for Different Time Series Methods the Value of Technical Expertise Individualized Analysis, and Judgmental Adjustment") is a graduate student at Université Laval, Quebec, Canada G1K 7P4. His undergraduate degree in Economics and Statistics is from INSEE in France. He is a member of the International Institute of Forecasters.

**Richard C. Grinold** ("Market Value Maximization and Markov Dynamic Programming") is Professor of Finance and Management Science at the School of Business Administration, University of California, Berkeley, California 94720. His main interests are investment management, portfolio optimization, long-range planning, stochastic programming, and manpower planning. He is a member of the American Finance Association, the Mathematical Programming Society, and the Operations Research Society of America.

**George P. Huber** ("Cognitive Style as a Basis for MIS and DSS Designs: Much Ado About Nothing?") is currently a Visiting Scholar at EXECUCOM Systems Corporation, Austin, Texas 78766-9758 and is on a leave of absence from the University of Wisconsin-Madison where he is a Professor in the Graduate School of Business and in the Department of Industrial Engineering. Dr. Huber's primary interests are in the areas of managerial and strategic decision-making and in the design of procedures and information systems for maximizing the effectiveness of decision-making at these levels. Dr. Huber is a member of TIMS.

**Donald L. Keefer** ("Three-Point Approximations for Continuous Random Variables") received a B.S. from Carnegie-Mellon University and an M.S. from Stanford University, both in Mechanical Engineering, and an M.S.

and a Ph.D. from The University of Michigan in Industrial and Operations Engineering. He works for Gulf Management Sciences, Gulf Oil Corporation, Pittsburgh, Pennsylvania 15230, where he specializes in resource allocation problems involving significant uncertainties. He is a member of TIMS and ORSA. His articles have appeared in a variety of OR/MS and engineering journals.

**Richard A. Murphy** ("Stocking Repair Kits for Systems with Limited Life") is President of Optimal Decision Systems Inc., Cincinnati, Ohio 45242, a consulting firm specializing in decision support systems for production systems engineering, manufacturing, and logistics. His current research interests are in the areas of availability/reliability analysis applied to production systems, mathematical programming with emphasis on large scale problems, and the application of mathematical programming to business problems. He is a member of IIE, ORSA, TIMS, and the Mathematical Programming Society. He has published in *AIIE Transactions*, *International Journal of Systems Science*, *Management Science*, *Operations Research*, *Technometrics*, and other journals.

**Sammy W. Pearson** ("Development of a Tool for Measuring and Analyzing Computer User Satisfaction") is a Department Group Manager at CACI, Inc.-Federal, Arlington, Virginia 22209. He received his B.A. and M.S. degrees from the Texas A&M University, and his Ph.D. from Arizona State University. His current research and consulting interests include automated documentation systems, productivity improvement through automation, measurement of computer user satisfaction, and the application of local area networks in office automation environments. Dr. Pearson's published work has appeared in several professional journals.

**Harold J. Schleaf** ("The Joint Determination of Marginal Rate of Return and Interest Adjusted Cost for Whole Life Insurance") is a Visiting Associate Professor in the Department of Business and Administrative Studies at Lewis and Clark College, Portland, Oregon 97219. He received a Ph.D. from the University of Chicago, M.S. from Oregon State University, and B.S. from Valparaiso University. His current research interests are in the areas of security marketmaking, queueing control,

and life insurance. He has published papers in the *Journal of Finance* and *Decision Sciences*. He is a member of TIMS, ORSA, and AIDS.

**Ramona L. Trader** ("A Bayesian Technique for Selecting a Linear Forecasting Model") is Assistant Professor of Management Science and Statistics at the College of Business and Management, University of Maryland, College Park, Maryland 20742. She holds the B.A., M.A., and D.B.A. degrees from Indiana University in Bloomington. Her primary research interests involve Bayesian inference for multivariate data and Bayesian reliability theory. She is a member of TIMS, the American Statistical Association, the Institute of Mathematical Statistics, and the Royal Statistical Society.

**Jyrki Wallenius** ("An Interactive Multiple Objective Linear Programming Method for a Class of Underlying Nonlinear Utility Functions") is Associate Professor of Management and Chairman, Department of Economics and Management, University of Jyväskylä, Finland. He was Visiting Assistant Professor in the Krannert Graduate School of Management, Purdue University, 1979-1980. He has published several papers in *Management Science*, *Operations Research*, etc. Dr. Wallenius' current research interests include multiple criteria optimization and decision analysis.

**Stanley Zionts** ("An Interactive Multiple Objective Linear Programming Method for a Class of Underlying Nonlinear Utility Functions") is Professor of Management Science and Systems at the School of Management at the State University of New York, Buffalo, New York 14214. He has also been associated with the European Institute for Advanced Studies in Management, Brussels as a Professor of Management from 1973 to 1975. He holds a B.S. in Electrical Engineering, and M.S. and Ph.D. in Industrial Administration, all from Carnegie-Mellon University. Professor Zionts, a member of TIMS and ORSA, has done research in mathematical programming and other areas, and his articles have appeared in several professional journals, including *Operations Research* and *Management Science*. He is also the author or coauthor of several books and proceedings, and serves as an associate editor of *Management Science* in the Mathematical Programming and Network areas.
