With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Imre Barany ("Strong Formulations for Multi-Item Capacitated Lot Sizing") graduated in Budapest in 1971. He got his Ph.D. also there. His main field of interest is convexity, geometry and their applications. He works with the Mathematical Institute of the Hungarian Academy of Sciences in Budapest. He spent a year in Moscow in 1978-79 and in Belgium, Louvain-la-Neuve in 1982-83.

Salvatore Belardo ("A Partial Covering Approach to Siting Response Resources for Major Maritime Oil Spills") is Assistant Professor of Management Science and Management Information Systems, School of Business, State University of New York, Albany, New York 12222. He is Director of its Center for Disaster Management. He received a B.S. ME from Rochester Institute of Technology and an M.S. and Ph.D. from Rensselaer Polytechnic Institute. He is currently a member of TIMS.

Peter Friesen ("A Longitudinal Study of the Corporate Life Cycle") is an Associate Professor at the Faculty of Management, McGill University, 1001 Sherbrooke St. West, Montreal, Quebec, Canada H3A 1G5. He received a Ph.D. in Decision Sciences from the Graduate School of Business, Stanford University in 1974. Research interests include organizational taxonomies and organizational change, strategy making, and topics in economics.

P. M. Ghare ("Monitoring an Input-Output Model for Production. I. The Control Chart") is Director, Productivity Evaluation Center, Virginia Polytechnic Institute and State University, Blacksburg, Virginia 24060. He earned B.E. degrees at the University of Bombay and the Ph.D. at Oklahoma State University. His published research includes papers on quality control, inventories, transportation networks, reliability, queues and graphs, and he is coauthor of *Industrial Operations Research* (1972), Prentice-Hall, *Applications of Graph Theory and Algorithms* (1978), North-Holland, and *Quality Control—Theory and Applications* (in press), Prentice-Hall. He is a member of ORSA and MPS and has held visiting professorships in Mexico, India, Egypt and Brazil.

David Goldsman ("Asymptotic Properties of Some Confidence Interval Estimators for Simulation Output") is a doctoral student in Operations Research and Industrial Engineering at Cornell University, Ithaca, New York 14853. He holds degrees in Mathematics, Physics, and Computer Science from Syracuse University. His research interests are in the areas of applied probability and statistics.

Linda Green ("A Queueing System with Auxiliary Servers") is Associate Professor in the Graduate School of Business, Columbia University, New York, New York 10027. She holds a B.S. in Mathematics from The City College of New York, an M.S. from the Courant Institute of Mathematical Sciences of NYU, and a Ph.D. in Operations Research from Yale University. She worked as an analyst for Bell Laboratories and AT&T, and has been a consultant to New York City and Citibank. She's the author of several articles dealing with stochastic processes, queueing theory, and applications. She is currently a Council Member of TIMS, Secretary/Treasurer of the Applied Probability Technical Section/College of ORSA/TIMS, and an Associate Editor for *Management Science*.

Commander John R. Harrauld USCG ("A Partial Covering Approach to Siting Response Resources for Major Maritime Oil Spills") is the Assistant Chief of the U.S. Coast Guard's Training and Edu-

cation Division in Washington, D.C. From 1978 to 1981 he served as Commanding Officer, U.S. Coast Guard Group Long Island Sound and Captain of the Port of New Haven, Connecticut. He received his Ph.D. and MBA from Rensselaer Polytechnic Institute and was a 1977-1978 Sloan Fellow at MIT. He is a member of TIMS and the American Society of Training and Development.

Y. V. Hui ("Monitoring an Input-Output Model for Production. I. The Control Chart") is Lecturer in Statistics at the Chinese University of Hong Kong. He received a B.Sc. in Mathematics (Chinese University of Hong Kong), an M.S. in Industrial Engineering (Texas Technological University), and a Ph.D. in Statistics (Virginia Polytechnic Institute and State University). His current research interests are in applied statistics.

D. R. Jensen ("Monitoring an Input-Output Model for Production. I. The Control Chart") is Professor of Statistics, Virginia Polytechnic Institute and State University, Blacksburg, Virginia 24060. He earned a B.S. (University of Tennessee) and M.S. and Ph.D. (Iowa State University). His published research includes papers on distribution theory and probability inequalities, limit theory and rates of convergence, linear models, multivariate statistical analysis, simultaneous inference, nonparametric statistics, and statistical quality control. He is a member of the Biometric Society, ASA, TIMS, MAA, and SIAM.

Danny Miller ("A Longitudinal Study of the Corporate Life Cycle") is Associate Professor at the Faculty of Management, McGill University, 1001 Sherbrooke St. West, Montreal, Quebec, Canada H3A 1G5, and at Ecole des Hautes Etudes Commerciales, Montreal. His research focuses on organizational archetypes and change, as well as corporate strategy formulation and decision making. He has published over 30 papers in a variety of journals. His most recent books are *Organizations: A Quantum View* (with Peter H. Friesen), Prentice-Hall, 1984; and *The Invisible Hand: Hidden Forces in Organizations* (with Manfred Kets de Vries), Jossey-Bass, 1984. Dr. Miller is on the editorial board of *Journal of Management*.

Herbert Moskowitz ("Effect of Risk Aversion on Single Sample Attribute Inspection Plans"), Ph.D. University of California at Los Angeles, is a Professor of Management and Director, Professional Graduate Programs in Management, at the Krannert Graduate School of Management, Purdue University, West Lafayette, Indiana 47907. He has authored three books in management science and statistics and has published some 60 papers in such journals as *Management Science*, *Operations Research*, *AIIE Transactions*, *Decision Sciences*, *Omega*, *Academy of Management*, *IEEE Transactions on Engineering Management*, *Policy Science* and *Organizational Behavior and Human Performance*. He has served as vice-president and member of the Executive Board of AIDS, ORSA liaison representative to AIDS, and is a member of TIMS.

André F. Perold ("Large-Scale Portfolio Optimization") is Associate Professor of Business Administration at the Harvard Business School, Boston, Massachusetts 02163. He received a Ph.D. in Operations Research and M.S. in Statistics from Stanford University, and a B.Sc. (Hons) from the University of the Witwatersrand, Johannesburg, South Africa. He was an IBM Post Doctoral Fellow in 1978/79. His current research is focused in the area of investment

management. His publications have appeared in various professional journals including: *Mathematical Programming*, *Journal of Finance*, and *SIAM Journal on Control and Optimization*.

Christopher J. Picone ("A Perturbation Scheme to Improve Hillier's Solution to the Facilities Layout Problem") is an Industrial Engineer with the Mare Island Naval Shipyard. He received both his BS and MS in Industrial and Systems Engineering at The Ohio State University. He is a member of IIE.

Robert Plante ("Effect of Risk Aversion on Single Sample Attribute Inspection Plans") is Assistant Professor of Management at the Krannert Graduate School of Management, Purdue University, West Lafayette, Indiana 47907. He received a Ph.D. in Business Administration from the University of Georgia in 1980. He has contributed to *The Accounting Review*, *TIMS Studies in The Management Sciences*, *Journal of the American Statistical Association* and *Management Science*. His professional affiliations include ORSA and TIMS. His research interests are in quantitative modeling in auditing, quality control and marketing.

Lee Schruben ("Asymptotic Properties of Some Confidence Interval Estimators for Simulation Output") is Associate Professor in the School of Operations Research and Industrial Engineering at Cornell University, Ithaca, New York 14853. His research and consulting interests are in the simulation of industrial systems. He holds graduate degrees from the University of North Carolina (M.S.) and Yale (Ph.D.).

John N. Tsitsiklis ("Periodic Review Inventory Systems with Continuous Demand and Discrete Order Sizes") was born in Thessaloniki, Greece, on February 18, 1958. He received the B.S. degree in Electrical Engineering and in Mathematics in 1980, the M.S. degree in Electrical Engineering in 1981 and completed his Ph.D. thesis in Electrical Engineering in 1983, all at MIT. Currently he is Assistant Professor of Electrical Engineering at Stanford University, Stanford, California 94305. His research interests are in decentralized decision making, estimation and computation, as well as stochastic control. Mr. Tsitsiklis is a member of Phi Beta Kappa, Sigma Xi and the Mathematical Association of America.

Tony J. Van Roy ("Strong Formulations for Multi-Item Capacitated Lot Sizing") holds a master degree in Engineering and received a Ph.D. in Operations Research from the Katholieke Universiteit Leuven. He held positions at the Katholieke Uni-

versiteit Leuven, Belgium, and at the Center for Operations Research and Econometrics, Université Catholique de Louvain, Belgium. His research interests are primarily in the area of mathematical programming. He has served as a professional consultant in production, inventory and distribution planning. He is a member of TIMS.

William A. Wallace ("A Partial Covering Approach to Siting Response Resources for Major Maritime Oil Spills") is Chairman and Professor of Statistical, Management, and Information Sciences, School of Management, Rensselaer Polytechnic Institute, Troy, New York 12181. He authored or co-authored over 70 articles and papers and four books, held various positions in TIMS and ORSA, and is an Associate Editor for *Management Science*.

Jim Ward ("A Partial Covering Approach to Siting Response Resources for Major Maritime Oil Spills") is Assistant Professor of Management at the Krannert School of Management, Purdue University, West Lafayette, Indiana 47907. He received his Ph.D. in Operations Research from Carnegie-Mellon's School of Urban and Public Affairs. His research interests include spatial analysis, and multiple objective optimization. He has previously published in *Operations Research*, and the North-Holland Series: *Studies in Mathematical and Managerial Economics*. He is a member of ORSA.

Wilbert E. Wilhelm ("A Perturbation Scheme to Improve Hillier's Solution to the Facilities Layout Problem") is Associate Professor in the Industrial and Systems Engineering Department, The Ohio State University, Columbus, Ohio 43210. He received a B.S. in Mechanical Engineering from West Virginia University and an M.S. and Ph.D. in Industrial Engineering and Operations Research from Virginia Polytechnic Institute and State University. Dr. Wilhelm's professional affiliations include Alpha Pi Mu, IIE, and ORSA.

Laurence Wolsey ("Strong Formulations for Multi-Item Capacitated Lot Sizing") is Professor at the Centre for Operations Research and Econometrics, Université Catholique, Louvain-la-Neuve, Belgium. His main interests are in integer programming and combinatorial optimisation, and for the last few years he has been working on the automatic reformulation of mixed integer programs so as to achieve practical solutions. He is also coauthoring a book on integer and combinatorial optimisation with G. L. Nemhauser. He is a member of the Mathematical Programming Society.
