With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Panayotis Afentakis ("Computationally Efficient Optimal Solutions to the Lot-Sizing Problem in Multistage Assembly Systems") is Assistant Professor of Industrial Engineering and Operations Research, Syracuse University, Syracuse, New York 13210. He holds a B.S. from the University of Athens, a B.S. from the University of Rome and he received both his M.S. and Ph.D. from the University of Rochester. Prior to his current position he taught at Carnegie-Mellon University and at Florida International University. His interests include Production Planning, MRP Systems, Analysis of BOMP algorithms, Scheduling and Computer algorithms. Professor Afentakis is a member of TIMS.

Jan Bell ("The Effect of Presentation Form on the Use of Information in Annual Reports") is Assistant Professor of Accounting in the Graduate School of Business at Columbia University, New York, New York 10027. She received a Ph.D. from UCLA, M.S. from California State University-Northridge, and B.S. from University of Tennessee. Her current research interests are in the areas of human judgment and the design of management control systems. She has published in *Journal of Business, Finance and Accounting*.

David Briggs ("Log Bucking and Lumber Manufacturing Using Dynamic Programming") is Assistant Professor of Wood Science and Technology in the College of Forest Resources, University of Washington, Seattle, Washington 98195. He received his B.S. in Forestry from the University of Massachusetts, M.F. in Wood Science from the Yale School of Forestry and Ph.D. in Forest Products from the University of Washington. His research interests include the use of management science methods in the forest products industry and in evaluating the effects of intensive forest cultivation methods on wood utilization.

Robert C. Carlson ("A Lot-Sizing Algorithm for Reducing Nervousness in MRP Systems") is Professor of Industrial Engineering and Engineering Management at Stanford University, Stanford, California 94305. He has also held positions at the Amos Tuck School of Business Administration at Dartmouth College and at Bell Laboratories. He holds a B.S. in Mechanical Engineering from Cornell University and an M.S. and Ph.D. in Operations Research from The Johns Hopkins University. His primary areas of interest for both teaching and research are production planning, capacity planning and allocation, and multicriterion optimization. Professor Carlson is a member of ORSA, TIMS, and APICS. He has published articles in *Operations Research*, *Management Science*, *Decision Sciences*, and *OMEGA*.

Thomas Cook ("An Urban Allocation Model Combining Time Series and Analytic

Hierarchical Methods") is Assistant Professor of Economics, George Fox College, Newberg, Oregon 97132. In addition, he is managing partner of Northwest University Associates, an educational and consulting firm. He has previously been employed in the telecommunications industry as a financial planner, economist and as a supervisor of a research group. He has previously published on regional economics, time series analysis and forecasting in various professional journals.

Bert De Brabander ("Successful Information System Development in Relation to Situational Factors Which Affect Effective Communication Between MIS-Users and EDP-Specialists") is Associate Professor of Organizational Behavior and Psychology at the University of Antwerp-RUCA, Faculty of Applied Economics, Middelheimlaan 1, 2020 Antwerp, Belgium. He published in the field of organizational aspects of computer use in *Journal of Business and Management Science*, and presented papers at several international conferences. His paper about decisionmaking was presented at the XXIInd International Meeting of TIMS in Kyoto.

Martin G. Evans ("Reducing Control Loss in Organizations: The Implications of Dual Hierarchies, Mentoring and Strengthening Vertical Dyadic Linkages") is Professor of Organizational Behavior at the University of Toronto, Faculty of Management Studies and Erindale College, Toronto, Ontario, Canada M5S 1V4. He received his Ph.D. from Yale University in 1968. His articles have appeared in *Journal of Applied Psychology*, *Organizational Behavior and Human Performance*, and *The Academy of Management Journal*. He serves on the Editorial Boards of the *Academy of Management Journal* and the *Canadian Journal of Administrative Studies*.

Bruce Faaland ("Log Bucking and Lumber Manufacturing Using Dynamic Programming") is Professor of Quantitative Methods in the School of Business Administration, University of Washington, Seattle, Washington 98195. He received a B.S. in Mathematics and an M.S. and Ph.D. in Operations Research, all from Stanford University. His current research interests are in mathematical programming, database management, and production. Professor Faaland is a member of TIMS and ORSA; his work has appeared in the *Journal of Combinatorial Theory*, *Management Science*, and *Operations Research*.

Paul Falchi ("An Urban Allocation Model Combining Time Series and Analytic Hierarchical Methods") is Market Research Supervisor in the Consumer Products Group of the Marketing Department at British Columbia Telephone Company, Burnaby, B.C. V5H 3Z7, Canada. He received a M.A. and M.U.P. from the University of Washington. His pre-

vious experience includes forecasting, economic/market research and time series analysis, in Network Planning, at General Telephone of the Northwest. His current research interest is demand and financial analysis related to telecommunications products. He is a member of the Regional Science Association, National Association of Business Economists and TSAF.

Bezalel Gavish ("Computationally Efficient Optimal Solutions to the Lot-Sizing Problem in Multistage Assembly Systems") is Associate Professor in Computers and Information Systems at The Graduate School of Management, The University of Rochester, Rochester, New York 14627. Professor Gavish received his B.Sc. (1966), M.Sc. (1971), and Ph.D. (1975) degrees in Operations Research from the Technion-Israel Institute of Technology. He has published numerous articles in the fields of computer communication networks, distributed computing systems, computer-assisted medical diagnosis, scheduling and routing in distribution and collection systems, and lot sizing and production planning in complex manufacturing operations, in *Management Science*, *Operations Research*, *Journal of the Association for Computing Machinery*, *IEEE Transactions on Communications*, *Mathematical Programming*, *Networks*, *European Journal of Operations Research*, *IBM Journal of Research and Development*, and *IIE Transactions*. He was awarded the 1972 IPA Award and the 1982 IIE Transactions Development and Applications Award for his research on the development of decision-support systems to manage the logistic operations of large organizations. He is a member of ACM, IEEE Computer Society, TIMS and ORSA.

Uday S. Karmarkar ("Computationally Efficient Optimal Solutions to the Lot-Sizing Problem in Multistage Assembly Systems") is Associate Professor and Area Coordinator of Operations Management and Operations Research at The Graduate School of Management, University of Rochester, Rochester, New York 14627. His research interests include inventory theory, production scheduling, product support, and decision behavior. Dr. Karmarkar holds a B.Tech. in Chemical Engineering from the Indian Institute of Technology, Bombay and a Ph.D. in Management Science from MIT, and has taught previously at the University of Chicago. He is a member of ORSA and TIMS and is an Associate Editor of *Naval Research Logistics Quarterly*. His work has appeared in *Operations Research*, *Naval Research Logistics Quarterly*, *Management Science*, *Econometrica*, *Organizational Behavior and Human Performance* and *IIE Transactions*.

Dean H. Kropp ("A Lot-Sizing Algorithm for Reducing Nervousness in MRP Systems") is Associate Professor of Operations Management at the Amos Tuck School of Business Administration, Dartmouth College, Hanover, New Hampshire 03755. He has also taught at The Graduate School of Management, North-

western University. He received his B.S., M.S., and Ph.D. degrees in Engineering and Industrial Engineering from Stanford University. His primary areas of research interest involve production scheduling and capacity planning and allocation. Professor Kropp is a member of ORSA, TIMS and APICS. He has published articles in *Management Science*, *The Journal of Medical Systems*, *Decision Sciences*, *IEE Transactions*, and *Production and Inventory Management*.

Tom K. Lee ("On the Reswitching and Convergence Properties of Research & Development Rivalry") is Assistant Professor of Economics, Department of Economics, University of California, San Diego, La Jolla, California 92093. He received his doctorate degree in Social Sciences from the California Institute of Technology in 1979. His publications have appeared in *Management Science*, *Bell Journal of Economics*, *Quarterly Journal of Economics* and *Journal of International Economics*. He is a member of the American Economic Association. His research interests include Industrial Organization (Economics of Technological Change), Resource Economics and Economics of Information.

Reynaldo S. Mariano ("An Urban Allocation Model Combining Time Series and Analytic Hierarchical Methods") is Assistant Vice-President of Corporate Planning at the Bank of the Philippine Islands, Metro Manila, Philippines. He holds an M.S. and a Ph.D. from the University of Pennsylvania. His previous professional experience involved conceptualization, development and application of management science, economic and planning models for General Telephone and Electronics Company, British Columbia Telephone Company and Bell Canada. His current research interests are in time series analysis and corporate information systems. He is a member of TIMS, ORSA, CORS, IASC and TSAF.

Carl A. Mauro ("Factor Screening in Simulation: Evaluation of Two Strategies Based on Random Balance Sampling") is an Associate Statistician at Desmatics, Inc., P.O. Box 618, State College, Pennsylvania 16801. He received his B.S. in Mathematics and M.A. in Statistics from The Pennsylvania State University. His interests include mathematical statistics, computer simulation, data analysis, experimental design, statistical modeling, operations research, and general statistical theory. In addition to this paper, he has published papers in the area of factor screening in *Simulation* and *Technometrics*. He is a member of ASA.

Dennis E. Smith ("Factor Screening in Simulation: Evaluation of Two Strategies Based on Random Balance Sampling") is a Principal Research Statistician at Desmatics, Inc., P.O. Box 618, State College, Pennsylvania 16801. He received a B.A. in Mathematics from Wabash College and an M.S. in Mathematics, an M.S. in Statistics, and a Ph.D. in Statistics from the University of Wisconsin. His interests include most aspects of statistical and OR methodology. He has published in a number

of journals, including *Management Science*, *Naval Research Logistics Quarterly*, *Operations Research*, *Simulation*, and *Technometrics*. He is a member of TIMS, ORSA, and ASA.

Geert Thiers ("Successful Information System Development in Relation to Situational Factors Which Affect Effective Communication Between MIS-Users and EDP-Specialists") is Associate Professor of Management at

the University of Antwerp—RUCA, Faculty of Applied Economics, Middelheimlaan 1, 2020 Antwerp, Belgium. He received his degree of Doctor of Science at the University of Ghent. Since then he has been with the Department of Business Administration, where he teaches Administrative Data Processing. His research interests include structured programming and system development methodologies.

ECISION MAKING TOOLS:

COMPUTER MODELS FOR MANAGEMENT SCIENCE

(Software and User's Manual)

by Warren J. Erikson, University of Southern California; and Owen P. Hall Jr., Pepperdine University.
Excellent "hands on" introduction to how the microcomputer meets management science in areas from project scheduling to decision tree analysis. 1983

- ☐ USER'S MANUAL WITH SOFTWARE \$24.95 ☐ Apple II* (10493) ☐ IBM PC* (10495)
☐ USER'S MANUAL ONLY (10496) paperbound 250pp. \$14.95 (tent.)

APPLIED MATHEMATICAL PROGRAMMING

by Stephen P. Bradley, Harvard University; and Arnoldo C. Hax and Thomas L. Magnanti, Massachusetts Institute of Technology

☐ 1977. 00464. 752pp. \$30.95.

LINEAR AND NONLINEAR PROGRAMMING, 2ND ED.

by David G. Luenberger, Stanford University

☐ 1984. 15794. 560pp. \$30.95.
