With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Norman R. Baker ("Economic Models for R and D Project Selection in the Presence of Project Interactions") is Professor of Quantitative Analysis, University of Cincinnati, Cincinnati, Ohio 45221. He earned his B.S.I.E. from Northeastern University and his M.S. and Ph.D. from Northwestern University. He has authored papers in the areas of decision processes, technological innovation, and R&D management and has consulted in these areas for several organizations. He is a member of ORSA, TIMS, AIDS, and IEEE.

Wilson Ballard ("Scheduling School Buses") is currently a student at the American Graduate School of International Management, Phoenix, Arizona 85306. He received a B.A. in Administration Sciences from Yale University and is a Certified Public Accountant in the State of New York. A previous publication in *The Internal Auditor* described effective internal auditing for nonprofit organizations.

Richard J. Boland, Jr. ("Sense-Making of Accounting Data as a Technique of Organizational Diagnosis") is an Associate Professor of Accountancy at the University of Illinois at Urbana-Champaign, Champaign, Illinois 61820. His research interests focus on the process of problem formulation and system design. He is the co-author with R. I. Tricker of *Management Information and Control Systems*, John Wiley, 1982. Some of his works have appeared in *Accounting, Organizations and Society*, *Management Science*, and *Journal of Management Studies*.

John L. Bryant ("Economic Models for R and D Project Selection in the Presence of Project Interactions") is Associate Professor in the Quantitative Analysis Department, College of Business Administration, University of Cincinnati, Cincinnati, Ohio 45221. His major areas of research interest include the development of applied statistical methodology, and availability/reliability analysis of stochastic models.

Baruch Fischhoff ("Setting Standards: A Systematic Approach to Managing Public Health and Safety Risks") is Research Associate at Decision Research, A Branch of Perceptronics, 1201 Oak Street, Eugene, Oregon 97401. An experimental psychologist, his research focuses on risk management, risk perception, decision analysis, public policy, and methods for improving and supporting judgment and decision making. He is on the editorial boards of *Journal of Personality and Social Psychology*, *Organizational Behavior and Human Performance*, *Journal of Forecasting*, and *Environment*. Currently he is a member of the National Research Council's Committee on Human Factors and Priority Mechanisms for Chemical Testing.

G. Edward Fox ("Economic Models for R and D Project Selection in the Presence of

Project Interactions") is Assistant Professor of Quantitative Analysis, School of Management, University of Minnesota, Minneapolis, Minnesota 55455. He received a B.A. from Lewis University ('76), an M.B.A. from the University of Cincinnati ('78), and a Ph.D. from the University of Cincinnati ('80). His primary research interest is in the application of mathematical programming models to managerial decision making. He is a member of TIMS and AIDS.

Dan Horsky ("Estimation of Attribute Weights from Preference Comparisons") has taught on the faculties of the University of Rochester and Tel Aviv University. He is a member of the editorial board of *Marketing Science* and *Journal of Marketing*, and was an Associate Editor of *Management Science*. He has written papers on various marketing topics which have appeared in *Management Science*, *Marketing Science*, *Journal of Marketing Research*, and *Journal of Business*.

James H. Patterson ("A Computational Comparison of Exact Approaches for Solving the Multiple Constrained Resource, Project Scheduling Problem") is currently Visiting Professor of Business Administration, University of Nijenrode, Straatweg 17, 3621 BG Breukelen, The Netherlands, on sabbatical leave from the University of Missouri-Columbia. Professor Patterson has a B.S. degree from the University of Colorado, and a D.B.A. degree from Indiana University. In addition to publishing in journals such as *Management Science*, *Operations Research*, *AIIE Transactions*, *Naval Research Logistics Quarterly*, etc., Professor Patterson serves as an Associate Editor of *Management Science* and *Foundations of Control Engineering*. He is currently involved in the design and creation of data bases for solving the resource constrained, project scheduling problem as well as the assembly line balancing problem, with both data bases being developed to provide for the evaluation of exact and heuristic approaches for solving these two scheduling problems. Professor Patterson is a member of TIMS, ORSA, and AIDS.

Michael Pinedo ("Scheduling Jobs with Exponentially Distributed Processing Times on Two Machines with Resource Constraints") is Assistant Professor of Industrial Engineering and Operations Research, Columbia University, New York, New York 10027. A graduate of the Delft Institute of Technology (Delft, Holland), he received his Ph.D. from the University of California at Berkeley. His interests are in stochastic scheduling, queueing, and reliability.

Gregory P. Prastacos ("Blood Inventory Management: An Overview of Theory and Practice") is Professor of Quantitative Analysis at The Athens School of Economics and

Business Science (Patission 76, Athens 104, Greece), and Director of OMAS, the Athens Group on Applied Systems Analysis. He holds a B.S. and an M.S. in Computer Science, and an Sc.D. in Operations Research, all from Columbia University. He is the co-recipient of the 1979 International Management Science Achievement Award, and has recently been elected Fellow of the Washington Academy of Sciences. Professor Prastacos has previously been on the faculty of the University of Pennsylvania's Wharton School, and has also taught at Columbia's Business School, and the University of Bern. His articles have appeared in a number of journals including *Management Science*, *Operations Research*, *Computers & Operations Research*, *Journal of the Operations Research Society*, *Interfaces*, and *Transfusion*. His current research interests concentrate around the use of modern technologies in order to improve the efficiency and effectiveness of decisions and operations in the service sector. Professor Prastacos is a member of TIMS, ORSA and HELORS.

M. R. Rao ("Estimation of Attribute Weights from Preference Comparisons") is Professor of Operations Research at the Indian Institute of Management, Bangalore 560027, India. He is also associated with New York University. He holds a B.E. in Mechanical Engineering from the University of Madras, a M.E. in Industrial Engineering from Cornell University, and M.S. and Ph.D. in

Industrial Administration from Carnegie-Mellon University. Professor Rao is a member of ORSA and the Mathematical Programming Society. His articles have appeared in several professional journals. He is an Associate Editor of *Operations Research Letters*.

Arthur J. Swersey ("Scheduling School Buses") is Professor of Operations Research, School of Organization and Management, Yale University, New Haven, Connecticut 06520. He received a B.S. from MIT and D.Eng.Sci. from Columbia. He was a member of the fire and police projects at the New York City-Rand Institute and is co-recipient (with several other fire project members) of the 1976 NATO Systems Science Prize. He is co-editor (with Edward Ignall) of a forthcoming volume on urban services in the TIMS Studies in Management Sciences Series, and is completing a textbook on quantitative methods. He is a member of TIMS and ORSA.

Gideon Weiss ("Scheduling Jobs with Exponentially Distributed Processing Times on Two Machines with Resource Constraints") is Senior Lecturer of Statistics at Tel Aviv University, Tel Aviv, Israel and is currently visiting the Georgia Institute of Technology. A graduate of the Hebrew University, Jerusalem, he received his Ph.D. from the University of London. His interests are stochastic scheduling problems, reliability, and Markov decision processes, as well as time series analysis and water resources research.
