With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Norman R. Baker ("Project Selection Decision Making Linked to a Dynamic Environment") Professor of Quantitative Analysis, is currently Acting Senior Vice President and Provost at the University of Cincinnati, where he formerly served as Head of the Department of Quantitative Analysis in The College of Business Administration, and as Vice Provost. Dr. Baker's undergraduate degree in Industrial Engineering is from Northeastern University; his Ph.D. from Northwestern University is in the field of Industrial Engineering and Management Science. His college teaching has reflected continued interest in the areas of operations research and organization theory, with special research emphasis on research and development management, innovation and decision processes. Dr. Baker's research and publications include a major contribution to the book, *Technological Innovation: A Critical Review of Current Knowledge* published in 1978, and more than 30 papers in such journals as *Management Science*, *Decision Sciences*, *OMEGA*, *IEEE Transactions on Engineering Management*, *Research Policy*, *R&D Management*, and *Journal of American Society for Information Sciences*.

Marc A. De Bodt ("Continuous-Review Policies for a Multi-Echelon Inventory Problem with Stochastic Demand") is currently at the Logistics Systems Dept. of Agfa-Gevaert N.V./Belgium, where he is involved in the design of management systems for production planning and inventory control. He received his MSME, MSIE and Ph.D. in Industrial Management from the Katholieke Universiteit Leuven (KUL). Prior to joining Agfa-Gevaert N.V., he was a CIM-Fellow (Interuniversity College for Studies in Management) at KUL, and Visiting Fellow at MIT in the Sloan School of Management. His current research interests are in the area of logistics, production planning and inventory control.

G. Edward Fox ("Project Selection Decision Making Linked to a Dynamic Environment") is Assistant Professor of Decision Sciences, School of Management, University of Minnesota, Minneapolis, Minnesota 55455. He received a B.A. from Lewis University in 1976, an M.B.A. from the University of Cincinnati in 1978, and a Ph.D. from the University of Cincinnati in 1980. His primary research interest is in the application of mathematical programming models to managerial decision making. He is a member of TIMS and AIDS.

Everette S. Gardner, Jr. ("Forecasting Trends in Time Series") is a Commander in the Supply Corps of the U.S. Navy, currently serving as Director of the Operations Analysis Department at the Navy Fleet Material Support Office, Mechanicsburg, Pennsylvania

17055. His department has responsibility for applied operations research on business management in the Navy. He holds the Ph.D. in Business Administration (Operations Management) from the University of North Carolina at Chapel Hill. Dr. Gardner is also Associate Professor of Operations Management, Pennsylvania State University, and Associate Editor of *Journal of Forecasting*. His research has appeared in *Naval Research Logistics Quarterly*, *Management Science*, *Decision Sciences*, *Omega*, *Journal of Operational Research Society*, *Interfaces*, and *Journal of Forecasting*.

Stephen C. Graves ("A Multi-Echelon Inventory Model for a Repairable Item with One-for-One Replenishment") and ("Continuous-Review Policies for a Multi-Echelon Inventory Problem with Stochastic Demand") is Associate Professor of Management Science at the Alfred P. Sloan School of Management, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139. He received an A.B. and M.B.A. from Dartmouth College, and a Ph.D. from University of Rochester. He has published several articles in the area of production and operations management. His current research interests include logistics systems, production planning and scheduling, automated production systems, and planning models for mental health care systems. Professor Graves is a member of TIMS.

Charles M. Harvey ("Decision Analysis Models for Social Attitudes Toward Inequity") is Associate Professor, Department of Mathematical Sciences, Dickinson College, Carlisle, Pennsylvania 17013. He received a Ph.D. in Mathematics from Stanford University. He has been a consultant for the U.S. Department of Transportation, has written a textbook, *Operations Research: An Introduction to Linear Optimization and Decision Analysis* (North-Holland), and has published articles in a number of journals including *Management Science*, *Operations Research*, *Large Scale Systems*, and *Journal of the Operational Research Society*.

John C. Hershey ("Probability versus Certainty Equivalence Methods in Utility Measurement: Are They Equivalent?") is Professor in the Decision Sciences and the Health Care Systems Departments, The Wharton School, University of Pennsylvania, Philadelphia, Pennsylvania 19104. He is also director of Research for the Leonard Davis Institute of Health Economics at the University of Pennsylvania. He received a B.S. from Carnegie-Mellon University and an M.S. and Ph.D. from Stanford University. His research interests include health systems analysis and normative and descriptive analyses of decisions under uncertainty. He is a member of TIMS.

Nae-Heon Kim ("An Improved Successive Linear Programming Algorithm") was graduated from the Graduate School of the University of Texas at Austin. Currently he is an Assistant Professor of the Ajou University in Korea. He is a member of KOR/MSS (Korean Operations Research/Management Science Society) and KIIIE (Korea Institute of Industrial Engineering).

Leon Lasdon ("An Improved Successive Linear Programming Algorithm") is the Ed and Molly Smith Professor of Business, Professor of Mechanical Engineering, and the Sam Barshop Fellow in the IC² Institute, at the University of Texas at Austin, Austin, Texas 78712. He received a B.S. degree from Syracuse University and M.S. and Ph.D. degrees from Case Institute of Technology, where he taught in the Operations Research Department until 1977. His articles have appeared in many professional journals, and he is author of a text *Optimization Theory for Large Systems*. His current research focuses on optimization algorithms, software, and applications, with emphasis on nonlinear and large scale problems. He is a member of ORSA, TIMS, and Mathematical Programming Society.

Tomislav Mandakovic ("An Interactive Decomposable Heuristic for Project Selection") has a Ph.D. in Operations Research, from the University of Pittsburgh. He is currently an Associate Professor of Decision Sciences in Florida International University. He has had academic experience at Universities: de Chile, Catolica de Valparaiso, Federico Santa Maria, Concepcion, Pittsburgh, North Carolina at Chapel Hill, Stanford, and Florida International. He has consulted for over 30 organizations in the last 10 years. He is a member of ORSA, Institute of Industrial Engineers, TIMS, Omega Rho Society, Sociedad Chilena de Investigacion de Operaciones, and Colegio de Ingenieros de Chile.

Ed. McKenzie ("Forecasting Trends in Time Series") lectures in Statistics in the Mathematics Department of the University of Strathclyde, Glasgow G1 1XW, Scotland, U.K. His research interests include the relationships between forecasting systems, with special reference to those employing the exponential smoothing concept, and the modeling of non-Gaussian time series.

Chris N. Potts ("A Lagrangean Based Branch and Bound Algorithm for Single Machine Sequencing with Precedence Constraints to Minimize Total Weighted Completion Time") is Lecturer in Mathematics at the University of Keele, U.K. He received a B.S. Degree in Mathematics from the University of Manchester, U.K., an M.S. degree in Operational Research from the University of Hull, U.K. and a Ph.D. in Operational Research from the University of Birmingham, U.K. His research interests are in combinatorial optimisation and scheduling. His publications have appeared in *Discrete Applied Mathematics*, *Eu-*

ropean Journal of Operational Research, *Mathematical Programming Study*, *Operations Research* and *Operations Research Letters*. He is a member of Operational Research Society.

Paul J. H. Schoemaker ("Probability versus Certainty Equivalence Methods in Utility Measurement: Are They Equivalent?") is Associate Professor of Decision Sciences in the Graduate School of Business at the University of Chicago. He started his studies in Physics and Mathematics at the University of Groningen (The Netherlands), and completed this major at the University of Notre Dame with a B.S. (magna cum laude) in physics. He pursued his graduate work at The Wharton School of the University of Pennsylvania, receiving an M.B.A. in Finance, an M.A. in Management and a Ph.D. in Decision Sciences. He has published numerous articles on decision-making for books and scholarly journals, the latter including *Journal of Risk and Insurance*, *Organizational Behavior and Human Performance*, *Management Science*, *Knowledge*, and *Journal of Economic Literature*. His book *Experiments on Decisions under Risk: The Expected Utility Hypothesis* was published by Kluwer Nijhoff Publishing Co. (Boston) in 1980. His main research interests are in decision-making under risk, multi-attribute utility theory, the psychology of judgement and choice, and strategic planning. He recently completed a 20-month sabbatical leave with The Corporate Planning and Strategy Group of Royal Dutch/Shell in London.

William E. Souder ("An Interactive Decomposable Heuristic for Project Selection") teaches courses in systems management engineering, organization behavior and applied operations research at the University of Pittsburgh, where he is Professor of Industrial Engineering and Director of the Technology Management Studies Group. He holds a B.S. with Distinction in Chemistry, an M.B.A., a Ph.D. in Management Science and is the author of over 70 research papers and three books on engineering management. Dr. Souder has received numerous prestigious awards, including one from the White House for service on the President's Advisory Committee on Federal Policies for Innovation. He serves as an Associate Editor of *IEEE Transactions on Engineering Management*, an Associate Editor of *Management Science*, an Associate Editor of *Journal of Product Innovation Management* and an officer in two small venture firms. Dr. Souder professes to be an excellent sailor, nature photographer and carpenter, and admits to being a lousy skier.

Edward O. Thorp ("Options on Commodity Forward Contracts") is President and Director of Research for Oakley Sutton Management Corporation and Professor of Finance, Graduate School of Management, University of California, Irvine. A mathematician by training, he has applied quantitative tools to investment and gambling problems. He is the author of numerous articles and the widely ref-

erenced books, *Beat the Dealer* and *Beat the Market*.

Jianzhong Zhang ("An Improved Successive Linear Programming Algorithm") is Associate Professor in Department of Mathematics, Shanghai Teachers' University and also in The School of Economics and Management Science, Tongji University, Shanghai, China. He

received a B.S. in Mathematics from Shanghai Normal College and a Ph.D. in Operations Research from The University of Texas at Austin. His published research includes papers on nonlinear programming, approximation theory and network problems. He is a member of The Board of Directors, The Society of Operations Research of China.

CALL FOR PAPERS

1986 ORSA/TIMS Marketing Science Conference

(Advances and Practices of Marketing Science)

THE UNIVERSITY OF TEXAS AT DALLAS

MARCH 12-15, 1986

The conference offers a unique environment for leading practitioners and academics to interact and probe the application of marketing science techniques, models and methods for the measurement and the analysis of markets, and the enhancement of marketing decisions. To achieve the desired atmosphere, conference attendance is limited to 150 people divided evenly between practitioners and academics.

Papers and position statements are being solicited for the sessions. Four copies of a 500 to 1000 word abstract of the proposed paper should be sent to the chairperson by November 15, 1985.

Abstracts and inquiries should be addressed to: Professor Ram C. Rao, The University of Texas at Dallas, M.S. J05.1, Box 830-688, Richardson, TX 75083-0688 (214) 690-2580.
