With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Katy S. Azoury ("Bayes Solution to Dynamic Inventory Models under Unknown Demand Distribution") is Associate Professor in the School of Business and Economics, California State University, Northridge, California 91330. She received a B.S. in Statistics from the American University of Beirut, an M.S. in Mathematics from Syracuse University, and a Ph.D. in Operations Research from University of California, Los Angeles. She has published articles dealing with Bayesian Inventory Models. Her current research interests are in the area of Stochastic Inventory/Production Optimization Models.

Klaus Brockhoff ("Optimal Compensation for Data-Sharing in Registration Processes") is Professor of Business Administration and Director, Institut für Betriebswirtschaftslehre, University of Kiel, Federal Republic of Germany. He received degrees in Economics from the University of Bonn, and in Business Administration from the University of Münster. His doctor's degree was granted from the University of Bonn. He was a Research Fellow at the University of California, Berkeley. He is the author of ten books, among them *Produktpolitik* (Product Policy), 1981, and some 100 articles in such journals as *Econometrica*, *IEEE Transactions on Engineering Management*, *European Journal of Operational Research*, *Operational Research*, *International Journal for Research in Marketing*, *Zeitschrift für Betriebswirtschaft*, *Zeitschrift für betriebswirtschaftliche Forschung*, *Weltwirtschaftliches Archiv*, etc. He is a member of TIMS and various European societies.

Amiya K. Chakravarty ("Balancing Mixed Model Lines with In-Process Inventories") is Professor of Business Administration, University of Wisconsin, Milwaukee, Wisconsin 53201, received his Ph.D. and M.S. degrees from the London School of Economics in England. He also has a Bachelor's degree in Engineering from the same university. He has published several papers in *Operations Research*, *Management Science*, *IIE Transactions*, *International Journal of Production Research*, *Journal of Operational Research Society*, *European Journal of Operational Research*, and *Journal of Applied Mathematics*. He has been involved in research in Production/Inventory Systems, General System Structure, Project Management and special forms of simplex. His current research interests are Multi-Echelon Production/Inventory Systems, Group Technology, Flexible Manufacturing Systems and Decision Support Systems. Apart from Production/Operations Management he has also conducted short seminars for practicing managers in his area of interest. In addition to teaching at universities and management institutes, he has worked in the aero engine industry, in civil engineering as a plan-

ner and for a computer and management consultancy firm.

Eric M. Eisenberg ("The Dynamics of Organizational Proximity") (Ph.D., Michigan State University) is an Assistant Professor of Communication Arts and Sciences at the University of Southern California, Los Angeles, California 90089. His publications address different aspects of organizational communication and have appeared in *Communication Monographs*, *Human Communication Research*, and *Journal of Communication*. His primary interest is in information control in formal organizations.

John E. Ettlie ("The Impact of Interorganizational Manpower Flows on the Innovation Process") is Senior Scientist, Center for Social and Economic Issues at the Industrial Technology Institute, Ann Arbor, Michigan 48106. Dr. Ettlie is on leave from his position as Associate Professor of Management at DePaul University in Chicago. His current interests include new product innovation in manufacturing and factory-of-the-future implementation issues. His recent publications have included two book chapters on the implementation of programmable manufacturing.

Claes Fornell ("Consumption Experience and Sales Promotion Expenditure") is Professor of Marketing, Graduate School of Business Administration, University of Michigan, Ann Arbor, Michigan 48109. He holds a Doctor of Economics degree from the University of Lund, Sweden. His research interests are in industrial organization economics with respect to buyer behavior and marketing strategy and the fusion of econometric and psychometric model building. He is the author of several books, including *A Second Generation of Multivariate Analysis* and his recent articles have appeared in *Journal of Marketing Research*, *Journal of Marketing*, *Journal of Consumer Research*, *Multivariate Behavioral Research*, and *American Sociological Review*.

Cheryl Gaimon ("The Optimal Acquisition of Automation to Enhance the Productivity of Labor") is Assistant Professor in the Faculty of Management Sciences, The Ohio State University, Columbus, Ohio 43210. She received a B.S. in Mathematics from Brooklyn College, CUNY, an M.S. in Operations Management, and a Ph.D. in Operations Research from Carnegie-Mellon University. She is the author of several articles in the areas of the acquisition of new technology, human resource planning, production/inventory scheduling, and machine maintenance. Recent publications have appeared in *Management Science*, *European Journal of Operational Research*, *IIE Transactions*, and *Optimal Control Applications and Methods*. She is a member of TIMS, ORSA, and AIDS.

Fred Glover ("New Polynomial Shortest

Path Algorithms and Their Computational Attributes”) is Professor of Management Science and Information Systems, and Research Director of the Center for Applied Artificial Intelligence at the University of Colorado, Boulder, Colorado 80309. He has authored or co-authored more than 150 published articles in the field of mathematical and computer optimization, and held editorial posts for *Management Science* and *Operations Research*. He has served as a National Visiting Lecturer for TIMS and ORSA and also as host and lecturer in the U.S. National Academy of Sciences Program of Scientific Exchange. Professor Glover is an Honorary Fellow of several national societies, including the American Association for the Advancement of Science, and has received awards for contributions to mathematical and computer methods from NATO, CBA Foundation, CERI, AIDS and the TIMS College of Practice. He has served on the boards of directors of several companies, and consults widely for industry and government.

Kenneth Kirste (“The Dynamics of Organizational Proximity”) manages a technical training contract involving Department of Defense satellite systems at System Development Corporation, Sunnyvale, California 94086. Previous publications include: “Determinants of Communication Network Involvement: Connectedness and Integration,” in *Group and Organization Studies*, 1983, and “Measuring Proximity in Human Organizations,” in *Social Psychology Quarterly* (March 1980). He has a BA in Communication Studies from San Jose State University.

Darwin Klingman (“New Polynomial Shortest Path Algorithms and Their Computational Attributes”) is Professor of Management Science in the Graduate School of Business and Professor of Computer Sciences in the College of Natural Sciences, The University of Texas, Austin, Texas 78712. He is the first recipient of the distinguished David Bruton, Jr., Centennial Chair in Business Decision Support Systems. His publication of over 150 research articles, coupled with the publication of two books, has earned him the reputation of being one of the world’s leading experts in the design and implementation of network optimization-based decision support systems. Dr. Klingman has given over 250 invited keynote addresses and presentations and has served on numerous funding and research policy committees of federal agencies. He is a member of the editorial board of *Discrete Applied Mathematics* and former associate editor of *Operations Research*, *Naval Research Logistics Quarterly*, and *Management Science*. He was Vice-President-at-Large of TIMS from 1981–83. Dr. Klingman is also known as an exceptional teacher, receiving The University of Texas’s Outstanding Graduate Teaching Award in 1983. He is currently director of the Center for Business Decision Analysis. He graduated Phi Beta Kappa and holds a B.A. (1966) and an M.A. (1967) in Mathematics from Washington State University and an Interdisciplinary Ph.D. (1969) in Business Administration,

Computer Sciences, and Mathematics from The University of Texas at Austin.

Robert E. Markland (“Optimization of Bank Transit Check Clearing Operations”) is Academic Program Director and Professor of Management Science in the College of Business Administration at the University of South Carolina, Columbia, South Carolina 29208. He received a B.S. in Civil Engineering from the University of Missouri–Rolla, and an M.B.A. and D.B.A. from Washington University (St. Louis). He has published articles in several journals including *Management Science*, *Naval Research Logistics Quarterly*, *Decision Sciences*, *Operational Research Quarterly*, *Journal of Operations Management*, and *Simulation*. He is also the author of a book: *Topics in Management Science*, Wiley, 1983, 2nd edition, and currently is Editor of *Decision Sciences*. His research interests include large scale mathematical programming and simulation. He is a member of AIDS, ORSA, and TIMS.

Robert M. Nauss (“Optimization of Bank Transit Check Clearing Operations”) is Associate Professor of Management Science in the School of Business Administration, University of Missouri, St. Louis, Missouri 63121. He received a B.S. in Industrial Engineering/Management Science from Northwestern University, an M.S. in Operations Research from Cornell University, and the Ph.D. in Operations Research from UCLA. He is the author of *Parametric Integer Programming* and has had articles published in *Management Science*, *Operational Research Quarterly*, *Financial Management*, as well as a number of other professional journals. He is a member of TIMS, ORSA, and Mathematical Programming Society.

Nancy V. Phillips (“New Polynomial Shortest Path Algorithms and Their Computational Attributes”) is Assistant Professor of Operations Research and Statistics and Assistant Director of the Center for Business Decision Analysis in the College of Business Administration, University of Texas, Austin, Texas 78712. She holds a master’s degree in Mathematical Sciences and a doctorate in Management Sciences from Clemson University. Her research in optimization-based decision support systems, network optimization, and graph theory has appeared in several journals, including *Management Science*, *Operations Research*, *European Journal of Operational Research*, and *Journal of Information and Optimization Sciences*. She is a member of TIMS.

William T. Robinson (“Consumption Experience and Sales Promotion Expenditure”) is Assistant Professor of Management, Krannert Graduate School of Management, Purdue University, West Lafayette, Indiana 47907. He received a Ph.D. in Business Administration from The University of Michigan in 1984. His main area of research interest is examining long-term advantages and disadvantages which market pioneers tend to receive in consumer and industrial markets. He has published an article in *Journal of Consumer Research* and is a member of American Market-

ing Association and American Economic Association.

Lynda White Rothman ("The Dynamics of Organizational Proximity") currently works for Standard Oil Company (Indiana), 200 East Randolph Drive, Chicago, Illinois 60680. She is the Supervisor of Training & Community Relations at the Amoco Research Center, Naperville, Illinois. Her current work interests include career planning & development, management development training, organization climate & communication and Employee Assistance Programs. She received both an M.A. in Organization Communication and an M.A. in Adult Education from Michigan State University, East Lansing, Michigan.

Avraham Shtub ("Balancing Mixed Model Lines with In-Process Inventories") is on the faculty of the Department of Industrial Engineering at Tel Aviv University, Tel Aviv, Is-

rael. He received his Ph.D. from the University of Washington, M.B.A. from Tel Aviv University, and B.S. from the Technion-Israel Institute of Technology. His research interests are in classification of production systems, production planning, and production scheduling. Dr. Shtub is a member of TIMS.

Birger Wernerfelt ("Consumption Experience and Sales Promotion Expenditure") is Assistant Professor at the Graduate School of Business Administration, University of Michigan, Ann Arbor, Michigan 48109. He received his doctorate at the Harvard Business School and was later a Research Fellow in Mathematical Economics at the University of Copenhagen. He does research in dynamic game theory and its application to competitive strategy. His recent publications have appeared in *Management Science*, *Strategic Management Journal*, and *European Economic Review*.
