With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Kenneth R. Baker ("The Effect of Commonality on Safety Stock in a Simple Inventory Model") is Professor of Operations Management in the Amos Tuck School of Business Administration at Dartmouth College, where his teaching and research activities center around applications of management science and problems in production planning and scheduling.

Jonathan Barzilai ("A Generalized Network Formulation of the Pairwise Comparison Consensus Ranking Model") is Assistant Professor of Management and Information Sciences and Adjunct Professor of Mathematics, Statistics and Computing Science at Dalhousie University, Halifax, B3H 1Z5. He received his B.Sc., M.Sc., and D.Sc. from the Technion, Israel. He has had articles published in *Mathematics of Operations Research*, *SIAM Journal on Numerical Analysis*, and others. He is a member of TIMS, ORSA and other professional organizations.

Ilker Baybars ("A Survey of Exact Algorithms for the Simple Assembly Line Balancing Problem") is Associate Professor of Operations Management at the Graduate School of Industrial Administration at Carnegie-Mellon University. Dr. Baybars is also the Associate Dean and Director of the MBA program. He did his undergraduate work at the Middle East Technical University (Ankara, Turkey) and earned both M.S. and Ph.D. degrees at Carnegie-Mellon. His articles have appeared in a number of journals including *European Journal of Operational Research*, *Discrete Mathematics* and *International Journal of Production Research*. His current research interests include the design and control of robotic lines. He is also the first recipient of the Emil Limbach Teaching Award for "Excellence in the Classroom" at Carnegie-Mellon University. Dr. Baybars is a member of APICS, MPS, ORSA and TIMS.

Peter J. Billington ("Heuristics for Multilevel Lot-Sizing with a Bottleneck") is Associate Professor of Operations Management in the College of Business Administration, Northeastern University, Boston, Massachusetts. He received a Ph.D. in Operations Management from Cornell University and is currently doing research into capacity constrained lot sizing, and quality and setup cost effects on lot sizes. His articles have appeared in *Management Science*, *IIE Transactions*, and *Decision Sciences*. He is a member of TIMS, AIDS, OMA and APICS.

Ruth N. Bolton ("Searching for Positive Returns at the Track: A Multinomial Logit Model for Handicapping Horse Races") is As-

sistant Professor of Marketing in the Faculty of Business, University of Alberta, Edmonton, Alberta, Canada T6G 2R6. She holds a Ph.D. in Industrial Administration from Carnegie-Mellon University. Her current research interests include pricing issues and the econometric analysis of optical scanner data.

Randall G. Chapman ("Searching For Positive Returns at the Track: A Multinomial Logit Model For Handicapping Horse Races") is Associate Professor of Marketing in the Faculty of Business, University of Alberta, Edmonton, Alberta, Canada T6G 2R6. He holds a Ph.D. in Industrial Administration from Carnegie-Mellon University. His articles have appeared in various journals including *Marketing Science*, *Journal of Marketing Research*, and *Journal of Consumer Research*. His current research interests include models and analysis of judgment, perception and preference formation, and choice behavior.

Wade D. Cook ("A Generalized Network Formulation of the Pairwise Comparison Consensus Ranking Model") is Professor in the Faculty of Administrative Studies, at York University, Toronto, Ontario, Canada M3J 2R6. He is a co-editor of a TIMS Studies book entitled *Planning Processes in Developing Countries* and is the author or co-author of over 40 articles appearing in a number of MS or OR journals. Professor Cook is also a consultant to a number of private sector and government organizations.

Theo S. H. Driessen ("Game Theory and Cost Allocation Problems") is Assistant Professor at the Twente University of Technology, Enschede, The Netherlands. He received his Ph.D. in Mathematics in 1985 from the University of Nijmegen. The title of his Ph.D. thesis is "Contributions to the Theory of Co-operative Games: The τ -Value and k -Convex Games". He has about 10 papers on game theoretical subjects in international journals.

Jehoshua Eliashberg ("Arbitrating a Dispute: A Decision-Analytic Approach") is Associate Professor of Marketing at The Wharton School, University of Pennsylvania, Philadelphia, Pennsylvania 19104. He received a B.Sc. in Electrical Engineering from the Technion-Israel Institute of Technology at Haifa, MBA specializing in Marketing and Operations Research from Tel-Aviv University, and doctoral degree in Quantitative Business Analysis and Marketing from Indiana University. His research emphasizes the development and applications of management science/decision analysis techniques to a variety of marketing problems including consumer preference measurement,

competitive decision-making, new products diffusion, and coordination in channels of distribution. His recent articles have appeared in *Management Science*, *Journal of Information & Optimization Sciences*, *Journal of Marketing Research*, and *Marketing Science*. He is an Associate Editor of *Management Science* and he serves on the Editorial Board of *Marketing Science*. Professor Eliashberg is a member of TIMS, ORSA, ASA and American Marketing Association.

Moshe Kress ("A Generalized Network Formulation of the Pairwise Comparison Consensus Ranking Model") currently holds a research position at the Center for Military Analyses (CEMA), P.O.B. 2250, Haifa, Israel. He received his B.A. in Mathematics and M.A. in Statistics-Operations Research from Tel-Aviv University, Israel and Ph.D. in Operations Research from The University of Texas at Austin in 1981. His research interests are in the areas of voting systems, network modelling and military operations research. Dr. Kress's articles have appeared in *Mathematical Programming*, *International Journal of Computer and Information Science*, *SIAM Journal of Applied Mathematics* and *European Journal of Operational Research*.

John O. McClain ("Heuristics for Multilevel Lot-Sizing with a Bottleneck") received his Ph.D. in Operations Research from Yale University in 1970. Since that time he has been on the faculty of Cornell University, where he is now a Professor in the S. C. Johnson Graduate School of Management. He has published articles in the areas of forecasting, production control, and health services research, and is co-author of a textbook on Operations Management. His articles have appeared in *Operations Research*, *Management Science*, *IIE Transactions*, *Health Services Research*, *Medical Care*, *Journal of Marketing Research*, *American Journal of Sociology*, *Journal of Operations Management* and several other journals. He has consulted for a number of business and health organizations on planning issues, productivity and quality in addition to the areas mentioned above.

Michael Magazine ("The Effect of Commonality on Safety Stock in a Simple Inventory Model") is Professor and Chairman of the Department of Management Sciences at the University of Waterloo, Waterloo, Ontario, Canada. His primary research interests involve the scheduling of production, machines and workers. He is an Associate Editor of *INFOR*, *IEEE Transactions on Engineering Management* and *OR Letters*, and is currently on the ORSA Council.

Kathryn D. Musser ("Financial Futures Hedging via Goal Programming") is a Senior Consultant in the Department of Consulting and Educational Services at EXECUCOM Systems Corporation, Austin, Texas. She received a B.S. in Economics and Political Science and an M.B.A. in Finance from Oklahoma State

University. She has completed additional graduate coursework in International Affairs at The George Washington University, Washington, D.C. Prior to joining EXECUCOM, Ms. Musser was employed as a consultant/analyst at Arthur Young & Company and Dun & Bradstreet. Her research interests are in financial and economic modeling, risk analysis, and simulation; and distributed DSS applications analysis, design, and implementation. She is a member of ORSA, TIMS, and AIDS.

John F. Muth ("Search Theory and the Manufacturing Progress Function") is Professor of Production Management, School of Business, Indiana University, Bloomington, Indiana 47401. He holds a B.S. in Industrial Engineering from Washington University (St. Louis) and M.S. and Ph.D. degrees in Mathematical Economics from Carnegie-Mellon University. His research interests include productivity theories and technological change, human behavior modeling, networks of queues, and computer-aided process planning. He has co-authored two books and published articles in *Management Science*, *Operations Research*, *Econometrica*, and *Journal of the American Statistical Association*. He is a member of IIE, American Economic Society, ORSA, and TIMS.

Henry L. W. Nuttle ("The Effect of Commonality on Safety Stock in a Simple Inventory Model") is Associate Professor of Industrial Engineering at North Carolina State University, Raleigh, North Carolina. He received a Ph.D. in Operations Research from The Johns Hopkins University. His current research and teaching interests are in Applied Operations Research and Production Systems. He is a member of IIE, ASEE, ORSA, TIMS, and APICS.

Yair E. Orgler ("A Game Theoretic Approach to Collections and Disbursements") is the Goldreich Professor of International Banking at the Faculty of Management, Leon Recanati Graduate School of Business Administration, Tel Aviv University, where he now serves as Vice-Rector. He received a B.Sc. in Industrial and Management Engineering from the Technion-Israel Institute of Technology, an M.Sc. in Industrial Engineering from the University of Southern California, and a Ph.D. from Carnegie-Mellon University. His main areas of interest are finance and banking, with an emphasis on analytical methods in short-term financial management. He published several books, including *Cash Management: Methods and Models*, and *Analytical Methods in Loan Evaluation*, as well as papers that appeared in *Management Science*, *Journal of Finance*, *Journal of Banking and Finance*, *Journal of Bank Research*, and *Journal of Money, Credit and Banking*. He is Associate Editor of *Journal of Banking and Finance*, and serves on the editorial boards of *Advances in Working Capital Management*.

Ramesh Sharda ("Financial Futures Hedging

via Goal Programming”) is Associate Professor of Management Science in the College of Business Administration at Oklahoma State University, Stillwater, Oklahoma 74078. He received a B.Engg. from the University of Udaipur (India), an M.S. from The Ohio State University, and an M.B.A. and Ph.D. from the University of Wisconsin–Madison. He has published articles in *Interfaces*, *Computers and Operations Research*, and *Annals of Operations Research*. His research interests are in financial applications of management science models, DSS, integration of microcomputers in OR/MS, and stochastic programming. He is a member of ORSA, TIMS, AIDS, and ABSEL.

Yair Tauman (“A Game Theoretic Approach to Collections and Disbursements”) is Professor of Decision Science at the Kellogg Graduate School of Management, Northwestern University and Associate Professor at the Faculty of Management, Leon Recanati Graduate School of Business Administration, Tel-Aviv University. His main areas of interest are game theory, mathematical economics and industrial organization.

L. Joseph Thomas (“Heuristics for Multilevel Lot-Sizing with a Bottleneck”) is the Nicholas H. Noyes Professor of Manufacturing and the

Director of Executive Development Programs in the Johnson Graduate School of Management, Cornell University. Professor Thomas received a B.S. from Carnegie-Mellon University and a Ph.D. from Yale University. He has written over 30 articles, including 10 for *Management Science*, and 3 books, including *Operations Management: Production of Goods and Services*, Prentice-Hall, 1985, 2nd edition. Professor Thomas is a member of TIMS, ORSA, IIE, APICS, AIDS and OMA.

Stef H. Tijs (“Game Theory and Cost Allocation Problems”) is Professor of Mathematics and Chairman of the OMEGA research group at the University of Nijmegen, The Netherlands. His research interests include game theory, mathematical economics and operations research. He has published about 50 papers in game theory and optimization theory, many of them in outstanding international journals.

Paul Zipkin (“Inventory Service-Level Measures: Convexity and Approximation”) is Associate Professor at the Graduate School of Business, Columbia University. He was educated at Reed College, University of California, and Yale University. His research interests include the development of models for production and distribution systems to support strategic-level planning.
