With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Mohsen Anvari ("Cash Transfer Scheduling for Concentrating Noncentral Receipts") is Associate Professor at the Faculty of Commerce and Administration, Concordia University, Montreal, Quebec, Canada. He holds a B.Eng. degree in Chemical Engineering from McMaster University and M.S. and Ph.D. degrees in Operations Research from Case Western Reserve University. His research and teaching interests are in the area of short-term financial management. He has published articles in *Financial Management*, *Omega*, *Decision Sciences*, *European Journal of Operations Research*, *Journal of Cash Management*, and other journals.

Richard Colombo ("Counting Your Customers: Who Are They and What Will They Do Next?") is Assistant Professor of Marketing at New York University. He holds an M.A. from the University of Cambridge, England, and an M.B.A. and Ph.D. from Columbia University. His current research interests are in stochastic modelling with a marketing orientation. For 10 years he worked as a survey researcher in England. He is a member of TIMS, American Statistical Association and is a Fellow of the Royal Statistical Society.

Peter Duchessi ("A Methodology for Determining a Hospital's Expected Costs for Changes in Patient Food and Service Mix") is Assistant Professor of Management Science and Management Information Systems, School of Business, State University of New York at Albany. He holds a Ph.D. in Administrative and Engineering Systems, Union College. His principal interests include developing computer-based solutions for improving business and manufacturing operations.

Uday S. Karmarkar ("The Multilocation Multiperiod Inventory Problem: Bounds and Approximations") is Associate Professor of Operations Management, Director of the Center for Manufacturing and Operations Management at the Graduate School of Management, University of Rochester, and Editor of *Journal of Manufacturing and Operations Management*. He holds a B.Tech. degree from I.I.T., Bombay and a Ph.D. from Sloan School, MIT. His research interests include manufacturing control systems, computer integrated manufacturing, and strategy issues in manufacturing and service firms.

Barry E. King ("Kanban, MRP and Shaping the Manufacturing Environment") is Assistant Professor of Management at Marquette University. His research interests include the use of simulation and artificial intelligence techniques for the solution of operating problems.

He has been published in *Decision Sciences* and *Harvard Business Review*.

Lee J. Krajewski ("Kanban, MRP and Shaping the Manufacturing Environment") is Professor of Operations Management and Chairman of the Faculty of Management Sciences at The Ohio State University. He received his BS, MS and Ph.D. degrees from the University of Wisconsin-Madison. His research interests include the design of multi-stage manufacturing systems; effects of environmental factors on inventory, productivity and customer service in manufacturing systems; aggregate planning and master production scheduling interfaces; and operations management for service organizations.

Pertti H. Lounamaa ("Adaptive Coordination of a Learning Team") is Development Manager in the Research Center of Nokia Corporation, P.O. Box 780, 00101 Helsinki, Finland. He received his Ph.D. from Stanford University in 1986, and is currently doing research in knowledge-based systems applied to engineering and management and in the simulation of dynamic systems. He is the co-author of several articles in conference proceedings and in *Coupling Symbolic and Numerical Computing in Expert Systems*. He is a member of ORSA and TIMS.

Edwin Mansfield ("Price Indexes for R and D Inputs: 1969-1983") is Director of the Center for Economics and Technology and Professor of Economics at the University of Pennsylvania. He has taught at Carnegie-Mellon, Yale, Harvard, and the California Institute of Technology, and has been elected a Fellow of the American Academy of Arts and Sciences, of the Econometric Society, and of the Center for Advanced Study in the Behavioral Sciences at Stanford. He has served as U.S. chairman of the U.S.-U.S.S.R. Working Party on the Economics of Science and Technology, and has been appointed to the National Technology Medal Committee. He is the author of 160 articles and 23 books, including leading textbooks in economics, microeconomics, and statistics.

James G. March ("Adaptive Coordination of a Learning Team") is Fred H. Merrill Professor of Management in the Graduate School of Business, Professor of Political Science and Sociology, and Senior Fellow in the Hoover Institution at Stanford University, Stanford, California 94305. He is the father of four children. He is also a student of decision making in organizations. In the latter guise he appears as the co-author of *Organizations* (Wiley, 1958), *A Behavioral Theory of the Firm* (Prentice-

Hall, 1963), *Mathematics for the Social and Behavioral Sciences* (Saunders, 1969), *An Introduction to Models in the Social Sciences* (Harper & Row, 1975), *Ambiguity and Choice in Organizations* (Universitetsforlaget, 1976), and *Leadership and Ambiguity*, 2nd ed. (Harvard Business School Press, 1986); and as the editor of the *Handbook of Organizations* (Rand McNally, 1965) and *Ambiguity and Command* (Ballinger, 1986).

Ann S. Maruchek ("An Algorithm for Technology Choice in Local Area Network Design") is Assistant Professor in the School of Business Administration, University of North Carolina-Chapel Hill. She received a B.S. in Mathematics, a M.S.I.E. and a Ph.D. in Industrial Engineering from the University of Oklahoma. Her research interests include location theory, the impact of telecommunications/information technology on manufacturing and knowledge work, and manufacturing planning and control systems. Recent publications have appeared in *IIE Transactions*, *Naval Research Logistics Quarterly*, *Journal of Operational Research Society* and *Journal of Operations Management*. She is a member of TIMS, ORSA, IIE, SME, IEEE, DSI and APICS.

Donald G. Morrison ("Counting Your Customers: Who Are They and What Will They Do Next?") is the Armand G. Erpf Professor of Business, Columbia University, New York, New York 10027. He received a B.S. from MIT and a Ph.D. from Stanford University. He is the Editor-in-Chief of *Management Science* and the Founding Editor of *Marketing Science*. His research interests include stochastic processes and marketing. His publications have appeared in a wide variety of journals. He is a member of a number of professional organizations including TIMS and ORSA.

Larry P. Ritzman ("Kanban, MRP and Shaping the Manufacturing Environment") is Professor of Operations Management in the College of Business at The Ohio State University. He joined the faculty in 1968, after receiving his doctorate from Michigan State University. His research interests include comparisons of alternate inventory systems, disaggregation, multistage lot sizing, capacity planning, shift scheduling for banks and postal systems, goal programming for space planning, layout problems, interactive computer models, operations strategy, and a diagnostic approach to productivity and inventory management. He has been active in research projects sponsored by private corporations as well as the United States Postal Service and the State of Ohio.

David C. Schmittlein ("Counting Your Customers: Who Are They and What Will They Do Next?") is Associate Professor of Market-

ing at the Wharton School, University of Pennsylvania, Philadelphia, Pennsylvania 19104. He received his Ph.D. from Columbia University, and has research interests in stochastic models applied to social processes, especially via empirical Bayes methods. He is an area editor for *Marketing Science* and a member of the editorial board for *Journal of Marketing Research*. His recent work has appeared in *Journal of the American Statistical Association*, *Journal of Consumer Research*, *Marketing Science*, *Organizational Behavior and Human Performance* and *Rand Journal of Economics*.

Joanne Sulek ("An Algorithm for Technology Choice in Local Area Network Design") is a doctoral candidate in Operations Management at the University of North Carolina at Chapel Hill. She has accepted a position as Adjunct Professor of Business at North Carolina A&T University. She holds a B.S. in Mathematics and an M.A. in Mathematics from Wake Forest University. Her major area of research is productivity impacts of local area network technology. She is a member of TIMS, APICS and American Mathematical Society.

Danny S. Wong ("Kanban, MRP and Shaping the Manufacturing Environment") is a lecturer in the MBA Programs of the Chinese University of Hong Kong. He received his B.S. in Mathematics from California State University, Fresno and M.S. and Ph.D. in Business Administration from The Pennsylvania State University. Before joining the Chinese University, he taught at California State University and Ohio State University. His areas of professional interest include mathematical modeling, manufacturing systems, information and control systems. He is recognized as a certified practitioner by the American Production and Inventory Control Society. Among the journals in which he has articles published are *Computers and Operations Research*, *Transportation Research-B*, *Transportation Science*, and *Educational and Psychological Measurement*.

Candace Arai Yano ("Setting Planned Lead-times in Serial Production Systems with Tardiness Costs") is Assistant Professor of Industrial and Operations Engineering at the University of Michigan in Ann Arbor. She holds an A.B. in Economics, a M.S. in Operations Research, and an M.S. and Ph.D. in Industrial Engineering from Stanford University. Her primary areas of interest are production planning, inventory control, scheduling, and logistics. She has published papers in *Management Science*, *IIE Transactions* and *Naval Research Logistics Quarterly*. Professor Yano is a member of ORSA, TIMS, and IIE.
