With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Everett E. Adam, Jr. ("An Empirical Evaluation of Alternative Forecasting Combinations") is Professor of Management, University of Missouri-Columbia. Professor Adam has received research grants from the Missouri Office of Administration, the National Science Foundation, and the U.S. Department of Labor. He has served on the Editorial Review Board of *Journal of Management*, currently serves in that capacity for *Academy of Management Review*, and is Associate Editor of *Decision Sciences*. In addition to publishing in refereed journals, recently published books include *Management for Effective Performance*, Prentice-Hall, 1985 (co-author), *Production and Operations Management: Concepts, Models and Behavior* (3rd Ed.), Prentice-Hall, 1986 (co-author) and *Productivity and Quality: Measurement as a Basis for Improvement* (2nd Ed.), University of Missouri-Columbia, 1986 (co-author). Dr. Adam has served as Chairman of the Production/Operations Management Division of the Academy of Management, on the National Council of the Institute for Decision Sciences, and is currently a Vice President of the Operations Management Association. He is a member of TIMS and previous contributor to *Management Science*.

Maqbool Dada ("Pricing Policies for Quantity Discounts") is Assistant Professor in the Department of Information and Decision Sciences at the University of Illinois at Chicago. He received his Ph.D. in Management Science from the Massachusetts Institute of Technology. His research interests are in inventory management and operations management in the service industry.

Edwin J. Elton ("Portfolio Analysis with Partial Information: The Case of Grouped Data") is Nomura Professor of Finance the School of Business, New York University. He has written 5 books and over 60 articles. His recent book is titled, *Modern Portfolio Theory and Investment Analysis*. His current research interest includes portfolio theory, use of expectational data and equilibrium models. Professor Elton is currently Co-Editor of *Journal of Finance* and was a former Associate Editor of *Management Science*.

Martin J. Gruber ("Portfolio Analysis with Partial Information: The Case of Grouped Data") is Nomura Professor of Finance at New York University, Graduate School of Business. He holds an S.B. (Massachusetts Institute of Technology) and a Ph.D. (Columbia University). He is author of 7 books and over 50 journal articles in *Management Science*, *Journal of Finance*, *Review of Economics and Statistics*,

Operations Research, *Journal of Financial Economics*, *Oxford Economic Papers*, etc. Professor Gruber is Co-Managing Editor of *Journal of Finance*. He is a former Departmental Editor-Finance of *Management Science*.

Priscilla A. LaBarbera ("Consumer Protection Laws: Violator Detection and Enforcement Strategy") is Associate Professor of Marketing at the Graduate School of Business Administration at New York University, New York, New York 10003. She received her M.B.A. and Ph.D. degrees in Marketing from Michigan State University. Her research interests include advertising and public policy, self-regulation, the marketing of nonprofit organizations and consumer behavior. She is currently the co-director of the American Marketing Association's Commission on Marketing in the Year 2000. She has published papers in *Journal of Advertising Research*, *Journal of Marketing*, *Journal of Marketing Research* and *Multivariate Behavioral Research*.

Hau L. Lee ("Warnings of Malfunction: The Decision to Inspect and Maintain Production Processes on Schedule or on Demand" and "A Multi-Echelon Inventory Model for Repairable Items with Emergency Lateral Transshipments") is Associate Professor in the Industrial Engineering and Engineering Management Department of Stanford University. He received his M.Sc. in Operations Research from the London School of Economics, and his Ph.D. in Operations Research from the Wharton School of the University of Pennsylvania. His research interests include inventory models, production scheduling, quality control and health care management systems. He is currently a member of AIIE, TIMS, ORSA, and the Institute of Statisticians.

Thomas W. Malone ("Modeling Coordination in Organizations and Markets") is the Douglas Drane Career Development Associate Professor of Information Technology and Management at the Sloan School of Management, MIT. He received a B.A. from Rice University in Mathematical Science, and an M.S. in Psychology, an M.S. in Engineering-Economic Systems, and a Ph.D. in Psychology, all from Stanford University. His current research focuses on (1) how artificial intelligence and other computer technology can help people work together in groups and organizations, and (2) how organizations can be designed to take advantage of the new capabilities provided by information technology. Before joining the MIT faculty, Professor Malone was a

research scientist at the Xerox Palo Alto Research Center (PARC) where his research involved designing educational software and office information systems.

Edward L. Melnick ("Consumer Protection Laws: Violator Detection and Enforcement Strategy") is Professor of Statistics at New York University, New York, New York 10003. He received his Ph.D. in Mathematical Statistics from George Washington University. His research interests are in the areas of time series analysis and statistical inference. He has published papers in *IEEE Transactions on Information Theory*, *Journal of Applied Probability*, *Management Science*, *Journal of Statistical Computation and Simulation*, *Time Series Analysis*, *SIAM Journal on Scientific and Statistical Computing*, *Journal of Forecasting*, *American Statistician* and *Technometrics*. He is a member of the Royal Statistical Society, American Statistical Association and Institute of Mathematical Statistics.

Mufit Ozden ("A Dynamic Planning Technique for Continuous Activities under Multiple Resource Constraints") is Associate Professor of Systems Analysis at Miami University, Oxford, Ohio 45056. He received a B.S. in Civil Engineering from Middle East Technical University in Turkey, and an M.S. and Ph.D. in Engineering Systems from UCLA. His current research interests are Operations Research and Artificial Intelligence applications in manufacturing systems.

M. E. Paté-Cornell's ("Warnings of Malfunction: The Decision to Inspect and Maintain Production Processes on Schedule or on Demand") field of expertise is risk analysis, decision analysis, and engineering economy, with recent emphasis on public sector and regulatory problems. She obtained her B.S. in Mathematics and Physics in 1968 in Marseilles, France, an Engineer Degree in Computer Science and Applied Mathematics in 1971 in Grenoble, France, a Master's Degree in Operations Research in 1972 at Stanford University, and a Ph.D. in Engineering-Economic Systems in 1978, also at Stanford University. Professor Paté-Cornell taught at MIT from 1978 to 1981, and joined the Stanford faculty in 1981. She currently teaches an undergraduate course in Engineering Economy, a graduate course in Engineering Risk-Benefit Analysis, which she developed at MIT, and a seminar in Risk Analysis. Her research in recent years has focused on the analysis and the optimization of warning systems with application to a large variety of cases, including monitoring of dams, earthquake prediction, monitoring of nuclear power plants, analysis of defense policies regarding the response to signals of nuclear attack, and financial monitoring problems. She worked more recently on the problems of using probabilistic risk analysis for regulatory decisions, in particular, for the nuclear power industry and the chemical industry.

Evan L. Porteus ("Setup Reduction and Increased Effective Capacity") is Professor of Management Science at the Graduate School of Business, Stanford University. Born and raised in Honolulu, Hawaii, he received a B.A. in Mathematics from Claremont Men's College and a Ph.D. in Operations Research from Case Institute of Technology. His publications have appeared in *Management Science*, *Operations Research*, *Naval Research Logistics Quarterly*, *Econometrica*, *Journal of Economic Theory*, *Operations Research Letters*, *Journal of Optimization Theory and Applications*, *SIAM Journal of Applied Mathematics*, *Mathematical Programming*, and *Zeitschrift für Operations Research*. He has served as an Associate Editor for both *Management Science* and *Operations Research*. He is currently conducting research on operations, with an emphasis on inventory models and setup reduction, in particular. He became motivated to study the effects of reducing setup times and costs after teaching about Japanese manufacturing techniques in an MBA class. He felt that the existing Operations Research models did not encompass the ideas and consequences of these techniques. This paper, as part of his current research thrust, is an attempt to help remedy that situation.

Thomas Dale Russell ("An Empirical Evaluation of Alternative Forecasting Combinations") is a Quantitative Business Analyst at Burlington-Northern Motor Carriers, Inc. in Fort Worth, Texas. Mr. Russell obtained his B.S.—Mechanical Engineering, M.S.—Industrial Engineering, and MBA—Finance at the University of Missouri-Columbia. He has full time experience with Armco, Inc. in Houston, Texas. His current assignments and interests are in marketing, operation and financial applications of management science techniques at Burlington Northern.

Anne M. Spence ("Setup Reduction and Increased Effective Capacity") is a PhD candidate at the Stanford Graduate School of Business in Decision Sciences. She holds a Bachelor of Science with Honors degree in Operations Research from Canterbury University, New Zealand, and a Masters of Science in Operations Research from Stanford University. She is interested in Production and Operations Management. She has been involved in a project on capacity planning in a semiconductor wafer fabrication area with Motorola, Inc. She is a student member of ORSA, IEEE and NZOR.

K. N. Srikanth ("Pricing Policies for Quantity Discounts") is Assistant Professor in the College of Business Administration, University of Illinois at Chicago. He received his bachelor's degree in Engineering from the Indian Institute of Technology, and his Ph.D. in Operations Research from the University of Rochester. His research interests include combinatorial optimization problems, with special reference to vehicle routing, network flows and

scheduling. He has published in *Management Science* and *Operations Research*.

George Tagaras ("Warnings of Malfunction: The Decision to Inspect and Maintain Production Processes on Schedule or on Demand") is Lecturer of Decision Sciences at the Wharton School of the University of Pennsylvania. He received a Diploma degree in Mechanical Engineering from the University of Thessaloniki in Greece and M.S. and Ph.D. degrees in Industrial Engineering from Stanford University. His research interests include the economic design of statistical quality control procedures and stochastic models for production and operations management. He is a member of TIMS, Institute of Industrial Engineers and American Society for Quality Control.

Willard I. Zangwill ("From EOQ Towards ZI") is Professor of Management Science at the Graduate School of Business, University of Chicago. He is actively interested in issues of productivity and operational effectiveness. Recently he has studied Japanese production processes and researched key features which contribute to their efficiency. Other areas in which he has published include nonlinear programming, fixed point calculation, production and inventory, strategy models, and proce-

dures for solving systems of equations. He is a former Departmental Editor of *Management Science*. He received an AB from Columbia and MS and Ph.D. from Stanford University.

Fred S. Zufryden ("A Model for Relating Advertising Media Exposure to Purchase Incidence Patterns") is Chairman and Professor of Marketing at the Graduate School of Business of the University of Southern California. He received B.A. in Mathematics, M.B.A. in Quantitative Methods/Operations Research and Ph.D. in Business Administration (specialization in Marketing and Quantitative Methods) degrees, all from the University of California at Los Angeles. Dr. Zufryden's research interests lie in the development and application of mathematical models to marketing problems. His numerous related publications have appeared in *Management Science*, *Journal of the Operational Research Society*, *Decision Sciences*, *Journal of the Royal Statistical Society*, *Journal of Marketing Research*, *Journal of Marketing*, *Journal of Advertising Research*, *International Journal of Research in Marketing*, *Journal of the Marketing Research Society*, *Interfaces*, *Journal of Business* and other journals. Dr. Zufryden is an active member of the American Marketing Association, ORSA and TIMS.
