With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Yash Aneja ("The Optimality of (s, S) Policies for a Stochastic Inventory Problem with Proportional and Lump-Sum Penalty Cost") is Professor of Management Science with the Faculty of Business Administration at the University of Windsor, Ontario, Canada. He received his B. Stats and M. Stats from the Indian Statistical Institute in Calcutta and Ph.D. in Operations Research from Johns Hopkins University. He is a member of TIMS/ORSA, CORS and the Mathematical Programming Society. His publications have appeared in various journals including *Management Science*, *Networks*, *Operations Research Letters*, *European Journal of Operational Research* and *Mathematical Programming Study*.

F. J. Arcelus ("Inventory Policies under Various Optimizing Criteria and Variable Markup Rates") is Professor of Quantitative Methods in Management at the University of New Brunswick, Canada. He received a BS in Quantitative Methods from California State University at Northridge and an MS in Industrial Administration and a PhD in Urban and Public Affairs from Carnegie-Mellon University. He is currently doing research on Inventory Control, Production Planning and Applied Statistical Modeling under a grant from the Natural Sciences and Engineering Research Council of Canada and has published articles in a variety of journals including *Technometrics*, *IIE Transactions*, *European Journal of Operational Research*, *International Journal of Production Research*, *Engineering Optimization*, *Mathematical Social Sciences* and *Engineering Costs and Production Economics*. He is a member of TIMS, DSI, CORS, ASA and ISIR.

Joseph Boffa ("A Mathematical Model of Dental Caries Used to Evaluate the Benefits of Alternative Frequencies of Bitewing Radiographs") is Associate Professor of Biostatistics, Epidemiology, and Health Care, Goldman School of Graduate Dentistry, Boston University. He is also Director, Graduate Program in Dental Care Management and Dental Director, Student Dental Health Program, Boston University. He received his B.A. in Psychology and D.D.S. from the State University of New York, Buffalo. He has an M.P.H. from the Harvard School of Public Health. His main interests are in public health dentistry, information systems for dentistry and dental capitation programs. His articles have appeared in *Journal of American Public Health Association*, *Community Dentistry and Oral Epidemiology*, *Health Care Management Review*, and *Journal of Dental Research*, among others.

Robert M. Conroy ("Consensus Forecasts of Corporate Earnings: Analysts' Forecasts and Time Series Methods") is Assistant Professor of Business Administration at the University of North Carolina at Chapel Hill. He received his doctorate from Indiana University. His main areas of research interest are corporate finance and the role of information in financial markets.

Timothy M. Devinney ("Entry and Learning") is Assistant Professor of Management of the Owen Graduate School of Management, Vanderbilt University. He received his B.Sc. degree from Carnegie-Mellon University in Psychology and holds an M.A. in Public Policy Studies, an M.B.A. in Economics and Statistics, and a Ph.D. in Economics all from the University of Chicago. Professor Devinney is an applied economist whose work covers such diverse topics as firm pricing decisions, the role of screening policies and bank-customer relations, the impact of taxation on firms' investment decisions, and the role of advertising. He has recently published a monograph on non-price rationing in financial markets, *Rationing in a Theory of the Banking Firm* (Springer-Verlag), and edited a book on pricing research, *Issues in Pricing* (Lexington Books).

Gregory Dobson ("Batching to Minimize Flow Times on One Machine") is Assistant Professor of Operations Management and Operations Research at the William E. Simon Graduate School of Business Administration, University of Rochester, Rochester, NY 14627. He received a B.S. from Cornell University and a Ph.D. from Stanford University. His main research interests are in manufacturing management, especially in production scheduling.

Richard Engelbrecht-Wiggans ("On Optimal Reservation Prices in Auctions") is Associate Professor of Business Administration at the University of Illinois, Champaign, Illinois 61820. A graduate of Harvard University and Cornell University (Ph.D. in Operations Research, 1978), his research focuses on modeling auctions and competitive bidding with the goal of gaining insights into what characteristics of a bidding mechanism have the predominant influence on the expected outcome. He is a member of ORSA, TIMS, and Econometrica, and has published in a variety of journals.

Hans-Göran Gröndahl ("A Mathematical Model of Dental Caries Used to Evaluate the Benefits of Alternative Frequencies of Bitewing Radiographs") is Associate Professor, Department of Oral Surgery, University of Gothenburg, Sweden. He received his D.D.S. from

the School of Dentistry, University of Lund, Sweden and his Odont. Dr. from the School of Dentistry, University of Gothenburg. He has been a Visiting Scientist, Diagnostic Systems Branch, National Institute of Dental Research, N.I.H. His main interests are in dental radiography, caries research, and decision analysis in dentistry. His articles have appeared in journals such as the *Swedish Dental Journal*, *Journal of Dental Research*, *Archives of Oral Biology*, and *Community Dentistry and Oral Epidemiology*.

Robert S. Harris ("Consensus Forecasts of Corporate Earnings: Analysts' Forecasts and Time Series Methods") is Associate Professor of Business Administration at the University of North Carolina at Chapel Hill. His main research interests are in corporate finance with particular emphasis on regulated industries and corporate mergers. He holds a doctorate in Economics from Princeton University.

Uday S. Karmarkar ("Batching to Minimize Flow Times on One Machine") is Associate Professor of Operations Management, Director of the Center for Manufacturing and Operations Management at the William E. Simon Graduate School of Business Administration, University of Rochester, and Editor of *Journal of Manufacturing and Operations Management*. He holds a B.Tech degree from I.I.T, Bombay and a Ph.D. from Sloan School, MIT. His research interests include manufacturing control systems, computer integrated manufacturing, and strategy issues in manufacturing and service firms. He has published papers in *Management Science*, *Operations Research*, *IIE Transactions*, *Naval Research Logistics Quarterly*, *Econometrica*, *Organizational Behavior & Human Performance*, and *Harvard Business Review*. He is a member of ORSA, TIMS, IIE, OMA and CASA/SME, member of the Manufacturing Management Council of the SME, co-founder and past Chairman of the Special Interest Group in Manufacturing (SIGMA) of ORSA.

Chen Lin ("A Predictive Method of Teacher's Structure in China's University (1985-2000)") is Professor of Systems Engineering at the Huazhong University of Science and Technology, Wuhan, China. He is a member of the Systems Engineering Institute of China. He helped to establish a mathematical model for developing programming for education in China. His papers in forecasts and decision making were published in *Systems Engineering/China* and several other journals.

John Mamer ("A Constrained Capital Budgeting Problem with Applications to Repair Kit Selection") is Assistant Professor in Management Science at the Graduate School of Management, UCLA, Los Angeles, CA 90024. He received B.S. (Mathematics) and B.A. (Economics) degrees from the University of California at Davis and M.S. and Ph.D. (Management Science) degrees from the School of Busi-

ness Administration, University of California, Berkeley. His current interests include stochastic models of inventory and manufacturing, applications of random graphs, and game theory. He is a member of ORSA and TIMS.

Hamid Noori ("The Optimality of (s, S) Policies for a Stochastic Inventory Problem with Proportional and Lump-Sum Penalty Cost") is Associate Professor of MS/OM at the School of Business and Economics, Wilfrid Laurier University and the Director of the Research Centre for Management of New Technology (REMAT). He received BSc degree from Pahlavi University, Iran, MBA from University of Ottawa, and Ph.D. in Operations Research from the University of Western Ontario. His publications have appeared in *Decision Sciences*, *Naval Research Logistics Quarterly*, *International Journal of Production Research*, *INFOR*, *Interfaces*, *Journal of Operational Research Society*, *Simulation and Games*, and others. His current research interests include production/inventory models and acquisition and implementation of new technology. He is a member of TIMS/ORSA, CORS, APICS and IIE.

Joseph S. Pliskin ("A Mathematical Model of Dental Caries Used to Evaluate the Benefits of Alternative Frequencies of Bitewing Radiographs") is Associate Professor, Department of Industrial Engineering and Management, and the Faculty of Health Sciences, Ben-Gurion University of the Negev, Israel. He is currently Deputy Rector at Ben-Gurion University. He has been affiliated with the Harvard School of Public Health, Boston University and Tel-Aviv University. He received his B.S. from the Hebrew University, Jerusalem, and his S.M. and Ph.D. degrees from the Division of Applied Sciences, Harvard University. His research interests are in the area of medical decision making and decision analysis. His publications have appeared in journals such as *Operations Research*, *Management Science*, *Medical Decision Making*, *European Journal of Operations Research*, and *Caries Research*.

Vasudevan Ramanujam ("Planning System Success: A Conceptualization and an Operational Model") is Assistant Professor of Management Policy at the Weatherhead School of Management, Case Western Reserve University, Cleveland, Ohio 44106. He holds a Ph.D. in Business Administration from the Graduate School of Business, University of Pittsburgh, a Post Graduate Diploma in Management from Indian Institute of Management, Ahmedabad and a Bachelor's degree in Metallurgical Engineering from Indian Institute of Technology. His research interests span the fields of strategic planning, technological innovation, and management information systems. He has published in several professional journals including *Academy of Management Review*, *Academy of Management Journal*, *Strategic Management Journal*, *Omega*, *Interfaces*, and

Journal of Product Innovation Management and Management Information Systems Quarterly.

Jeffrey L. Rummel ("Batching to Minimize Flow Times on One Machine") is an Instructor of Quantitative Methods and Operations Management at the Fuqua School of Business, Duke University, Durham, North Carolina 27706. He received a B.A. from Capital University and his M.S. in Operations Research from, and is a Ph.D. candidate in Operations Management at the William E. Simon Graduate School of Business Administration, University of Rochester. His current research interests are in modelling manufacturing systems and measuring their financial performance.

Michael Shwartz ("A Mathematical Model of Dental Caries Used to Evaluate the Benefits of Alternative Frequencies of Bitewing Radiographs") is Associate Professor of Health Care and Operations Management, School of Management, Boston University. He received his B.A. in Economics from Johns Hopkins University, his M.B.A. from the University of California, Berkeley, and his Ph.D. in Urban and Regional Planning from the University of Michigan. His current research interests are in mathematical modeling of disease processes, health care reimbursement, and the measurement and monitoring of quality of health care. His papers have appeared in journals such as *Operations Research*, *Medical Decision Making*, *Medical Care*, *Inquiry*, *Cancer*, and *Caries Research*.

G. Srinivasan ("Inventory Policies Under Various Optimizing Criteria and Variable Markup Rates") is an Associate Professor in Finance at the University of New Brunswick,

formerly at the Indian Institute of Management in Ahmedabad. He holds a Bachelor of Commerce from Madurai University, a Master of Commerce from Srivenkateswara University and a PhD in Management from the Indian Institute of Management at Ahmedabad. He is currently doing research on microcomputer applications to financial analysis and has published articles in a variety of journals including *European Journal of Operational Research*, *Engineering Costs and Production Economics*, *Kybernetes*, *Chartered Accountant* and *Indian Management Journal*.

N. Venkatraman ("Planning System Success: A Conceptualization and an Operational Model") is Assistant Professor of Management at the Alfred P. Sloan School of Management, Massachusetts Institute of Technology, Cambridge, Mass. 021390. He holds a Ph.D. in Business Administration from University of Pittsburgh, a Post Graduate Diploma in Management from Indian Institute of Management, Calcutta, India and a Bachelor's degree in Mechanical Engineering from Indian Institute of Technology. His Ph.D. dissertation won the 1986 A. T. Kearney Award for Outstanding Research in General Management from the Academy of Management and his research papers have been published in professional journals such as *Academy of Management Review*, *Academy of Management Journal*, *Strategic Management Journal*, *Omega*, *Interfaces*, and *Journal of Management*. His research interests relate to measurement and methodological issues in strategy research with a particular focus on conceptualizing and measuring the strategic characteristics of business units from a trait perspective.
